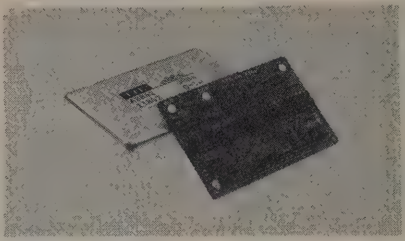
Storage temperature: −30 to +120 degrees C

Case: TTE filters are epoxy encased within hermetically sealed steel cases. The case finish is copper plate per MIL-C-1450 under fused tin per MIL-T-10727A.

TO ORDER: (1) specify the TTE series number and (2) specify the center frequency. The prices range from $37 to $125 each in prototype quantities. Specials are available at standard prices. Please contact us with your specification.



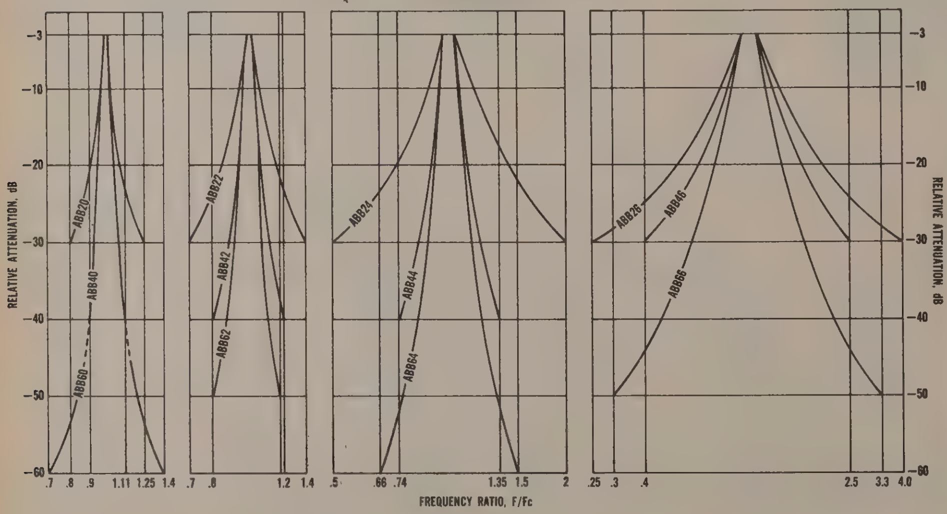
Active Filters are desirable at low frequencies as they are lighter and smaller than Passive Filters; impedance matching is not required and gains at the output may be specified.

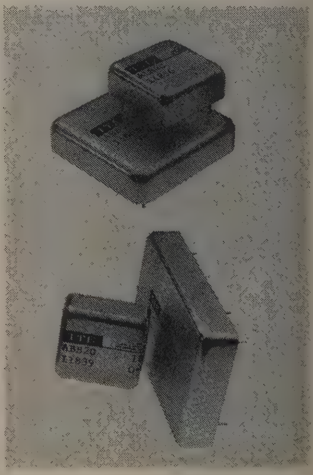
This section of the catalog contains specifications and descriptions of TTE's Active Filter line. Additional Lowpass and Highpass Filters, Band Reject Filters and Tunable Filters, will be released during the next several months and incorporated in the next cataloging. Individual product data pages will be available soon, please contact us with your specification.

When using this section of the catalog, please remember the graphs are visual aids, not specifications. The guaranteed specifications are (1) the attenuation at the passband edge (Fc) is −3dB ±0.5dB and (2) that the stopband attenuation listed in the catalog is the minimum attenuation that each filer type will develop. The output gain is unity ±0.1. Other gains may be specified.

Now the designer is able to specify either Active or Passive Filters from one supplier, this saves time for both the designer and the purchasing agent. At TTE there is NO MINIMUM ORDER, and NO ENGINEERING CHARGE for any standard series filter.

TYPICAL RESPONSE CURVES





Case and Mounting dimensions are listed on page 10.

TTE, Inc., 11650 W. Olympic Blvd., Los Angeles, CA 90064, (213) 478-8224

Selection Guide for TRW Filters

FILTERS

Almost 40 years of specialization in selective networks, from image parameter design to modern network synthesis are reflected in the superior performance, miniaturization, stability, and reliability of the electric wave filters produced by TRW today.

Because of the tremendous variation in requirements of frequency, band width, impedance, shape factor, size configuration, and other special characteristics such as envelope delay distortion, and return loss, TRW Inductive Products' catalog items are only a portion of the filters made. Special "custom" designs to customers' specifications range from DC to 30 MHz, from a volume of less than 0.1 cubic inches to more than 250 cubic inches. They cover applications such as telephone, telegraph, telemetering, multiplexing, carrier elimination and restoration, etc.

FOR SPECIAL DESIGNS the following information must be known: source and load impedances, insertion loss, pass band, stop band, operating level, operating temperature range, and size restrictions, plus any other special requirements such as phase matching, insertion loss matching, or attenuation matching, between units, envelope delay distortion, return loss limits, etc.

Since filters usually contain many precisely adjusted elements and are used in critical applications where continued reliable performance is a necessity, all TRW filters, both stock and specials, are manufactured and guaranteed to MIL-F-18327.

Units with identical electrical and mechanical characteristics as stock items, except for center frequency on band pass filters, or cutoff frequency on low and high pass filters, are known as stock specials. For example, a band pass filter identical to the BPM series with a center frequency of 2700 Hz would be identified as BPM-2700, a 2700 Hz center frequency band pass filter identical to the MNF series would be identified as MNF-2.7, a low pass similar to LPM series with a 2700 Hz cutoff frequency would be identified as LPM-2700.

FOR WIDE BAND PASS applications (more than an octave wide) low pass and high pass filters may be connected in tandem. For instance, the FLH-5000 in tandem with the FHH-200 will result in an attenuation characteristic flat within 1 dB from 300 to 4200 Hz, approximately 3 dB at 200 and 5000 Hz, 40 dB below 140 Hz, and 43 dB above 6400 Hz.

FOR BAND REJECT applications, the BPM band pass minifilters may be used by connecting as shown in our catalog.

Generally, on stock filters, variations of ±20% in the source and load impedances will have negligible effect on the attenuation response. FHH, FLH, FLL, BPM, and BMI filters may be used with a much lower source impedance and still give satisfactory results.

The nominal test level, E_g is 2.0 Volts RMS for all stock filters except 0.5 Volt on the BPM and 1.0 Volt on the LPM.

BAND PASS

Type No.	Center Frequency Range	Band Width	Source (Ohms)	Load (Ohms)	MIL Grade
MNF	400 Hz to 165 kHz	±7.5%	10K	10K	7
MWF	22 kHz to 165 kHz	±15%	10K	10K	7
BPM	400 Hz to 20 kHz	±3%	10K	10K or Grid	6
BMI	30 Hz to 400 Hz	±3%	10K	Grid	6
TGT	425 Hz to 3315 Hz	±42.5 Hz	600	600	6
TGR	425 Hz to 3315 Hz	±42.5 Hz	600	600	6

BAND REJECT

Type No.	Frequency Range	Source & Load (Ohms)	MIL Grade
BPM	400 Hz to 20 kHz	10K	6

LOW PASS

Type No.	Cutoff Frequency Range	Source & Load (Ohms)	MIL Grade
LPM	200 Hz to 15 kHz	10K	6
FLH	600 Hz to 5 kHz	10K	6
FLL	3.5 kHz to 50 kHz	600	6
LMI	50 Hz to 150 Hz	10K	6
LML	500 Hz to 12 kHz	600	6

HIGH PASS

Type No.	Cutoff Frequency Range	Source & Load (Ohms)	MIL Grade
FHH	200 Hz to 10 kHz	10K	6
HMI	50 Hz to 400 Hz	10K	6

LET US BE YOUR MANUFACTURING FACILITY

Do You Need Help To Get The End Product You Want?

After you have your design to meet your circuit performance requirements, ACC's Engineering Staff can assist you to package your circuit. We have a complete staff of electrical, mechanical, industrial, and chemical engineers to develop the most cost-effective assembly to compliment your product.

Custom Thick Film Hybrid?
If space is a problem, thick film hybrids are the answer to reduced manufacturing cost and component inventories. ACC can design and deliver a custom thick film hybrid to meet your performance, space, and cost requirements. For less stringent space requirements, formed discrete components or SOT packages are quite adequate. If space is tight or you have your own custom chip, a chip and wire hybrid may be the best approach.

The results to you are smaller size, improved reliability, and in most cases, better circuit performance due to the fact that thick film allows you to choose the exact resistor values and tolerances you want.

We have the capability to build your product to any stage of completion you desire. From a thick film print, fire, and trim, only, to a finished encased product, or any stage in between, by using custom thick film hybrids or printed circuit assemblies.

We will work with you during your development stage. We possess the capability to deliver into the millions, if necessary.

Automotive Controls Corporation (ACC) has over 200,000 square feet of production space. This facility, located in Southeast Kansas is staffed with a quality-conscious, dependable, rural and small-town work force. Our employees, to whom we owe our success, will build your product.

Printed Circuit Assembly?
If space is not a problem, then an automatically inserted printed circuit assembly is the most cost effective approach. ACC's printed circuit assembly area is equipped to insert components and wave solder boards up to 16 inches wide. Water washing is standard. Chlorinated cleaning solvents are available. The ACC facility is equipped and the personnel are trained to handle electrostatic sensitive components at all stages of production.

Packaging Support
In support of the electronic assembly, ACC can offer single-sided printed circuit boards, coil winding, transfer and injection molding, potting, metal and lead frame stampings, metal plating, and painting, if required.

Total Design Capability through manufacture, test and delivery

Hybrid Integrated Circuits for Military and Industrial Applications

Aeroflex designs, develops and manufactures custom hybrids for both military and industrial customers. We are qualified for use on B1, B52, F15, F16 and LAMPS MK III, plus numerous other ground and airborne systems and medical and communications equipment.

Will a custom hybrid do your job? Hybrid technology combines the quick-response design and manufacturing economies of the printed circuit assembly with the reliability and small size of the monolithic IC. To help you determine when the method will be cost effective, Aeroflex's experienced engineers will consider the circuit itself, manufacturing lead time, and the quantities involved.

Once the decision has been made, Aeroflex has the technical and manufacturing support to meet your most exacting requirements. Our circuit designers will put your parameters together into the smallest, lightest package consistent with effective performance.

We excel in designing active filters, sample and hold networks, low noise pre-amps, voltage regulators, drivers and receivers and digital interface circuits to meet MIL-STD-1553. Electrical performance is guaranteed by our automatic test systems.

In our complete manufacturing facility, Aeroflex has the skilled personnel and production equipment to meet every hybrid design and manufacturing requirement. For most designs, we use thick film deposition for its great flexibility. On occasion, however, we will utilize thin film chip components in conjunction with thick film resistors and conductors. Gold conductors and various silver alloys are often employed, as well as a variety of resistor inks to cover the full range of resistor values. We have and use both laser, for active trimming, and airbrasive trimming systems.

Packaging for all environments. Aeroflex commercial hybrids are often epoxy sealed in ceramic for industrial applications. Heavy duty packaging options include welded hermetically sealed all-metal cases including flat packs, dips, plug-ins and "TO" cans for military requirements.

Product Assurance, in and out. Our Product Assurance Department meets the requirements of MIL-Q-9858A. Quality Assurance, Quality Control, Qualification Testing and Equipment Calibration are its responsibilities. Incoming inspection is performed on semiconductors in accordance with MIL-STD-883, Method 2010.1 Level B. Similar criteria are applied to hybrid inspection. Screening and qualification testing to MIL-STD-883B, Method 5008 and MIL-M-38510 are also available.

HI-REL HYBRIDS

THICK & THIN FILM HYBRID TECHNOLOGY

CTS Microelectronics produces high quality thick film hybrid circuits. The modern 101,000 square foot manufacturing facility in West Lafayette, Indiana, specializes in volume production of "Hi-Rel" and commercial grade chip and wire hybrid circuits, quality discrete hybrids and custom resistor networks.

CUSTOM DESIGN/ QUALITY ASSURANCE.

CTS Microelectronics works directly with the customer to establish and maintain testing procedures that will insure the highest standards of quality and reliability. Specification reviews are a standard practice at CTS. Representatives from the quality assurance, sales and engineering departments met with the customer to establish the requirements of each designed circuit prior to any production run, following the general requirements of MIL-STD-883 and MIL-M-38510.

All incoming materials go through quality assurance. There, samples are taken, tested and quarantined until written approval is given to release them to stock.

The in-process inspection system checks circuits at all stages of manufacturing to insure highest quality workmanship and adherence to specifications. Finally, quality assurance inspectors thoroughly test the finished circuits. Records from each stage of design and manufacturing for all circuits assure complete traceability of a project.

CTS Microelectronics' in-house testing facilities include vibration, shock, centrifuge, thermal shock, temperature cycling, moisture resistance, leak testing, PIND, burn-in, life testing and moisture/gas analysis. These are applied as an effective check-and-balance system to assure consistent quality and reliability in circuit manufacturing.

WE'LL "SECOND SOURCE" STANDARD HYBRIDS **YOUR** WAY

STANDARD HI-REL HYBRIDS AVAILABLE TO YOUR SPECIFICATION FROM CTS MICROELECTRONICS, INC.

Now get standard pin-for-pin Hi-Rel Hybrid replacements with production extras like special screening, environmental testing, data logging and electrical testing.

For more than 20 years CTS Microelectronics has been a leading producer of Hi-Hel Hybrids that can withstand the harshest environments. These hybrids will meet test standards set out by MIL-STD 883. And now they are available for fast delivery in many pin-for-pin configurations.

When you need a reliable second source for Hi-Rel Hybrids, tested to your custom specifications, think first of CTS Microelectronics. For complete technical information, prices and delivery projection, get in touch with CTS Microelectronics, 1201 Cumberland Avenue, West Lafayette, IN 47906.

Or call (317) 463-2565.

AVAILABLE HOW YOU WANT THEM.

Others say — "Take-it-the-way-we-make-it." CTS will "second source" standard hybrids your way.

What a great alternate source for standard pin-for-pin Hi-Rel Hybrid replacements! When you are faced with the "take-it-or-leave-it" attitude that some major suppliers have adopted on Hi-Rel Hybrid standards — look to CTS Microelectronics. CTS will provide Hi-Rel Hybrids just as you want them. And, our prices are very competitive.

Don't settle for standard hybrids that don't meet your individual needs. Ask about the CTS-0002, 6, 8, 21, 32, 33, 34 and 41 as alternates for the LH and DH series. We'll make your standards to custom requirements.

STANDARD HYBRIDS **YOUR WAY**

Now get standard pin-for-pin Hi-Rel Hybrid replacements with production extras like special screening, environmental testing, data logging and electrical testing.

For more than 20 years CTS Microelectronics has been a leading producer of Hi-Hel Hybrids that can withstand the harshest environments. These hybrids will meet test standards set out by MIL-STD 883. And now they are available for fast delivery in many pin-for-pin configurations.

When you need a reliable second source for Hi-Rel Hybrids, tested to your custom specifications, think first of CTS Microelectronics. For complete technical information, prices and delivery projection, get in touch with CTS Microelectronics, 1201 Cumberland Avenue, West Lafayette, IN 47906. **Or call (317) 463-2565.**

FEATURES
1. Operation from a single +10V to +45V power supply.
2. Low standby power dissipation of only 35MW for 28V power supply
3. 1.5A, 50MS pulse current capability.

The CTS 0006 IB is a hybrid high voltage, high current driver, designed to accept standard DTL or TTL input levels and provide a pulsed load up to 1.5A from a continuous supply voltage up to 45V. AND inputs are provided with an EXPANDER connection, should additional gating be required.

Since one side of the load is grounded, there is less likelihood of false turn-on due to an inadvertant short in the drive line.

The high pulse current capability makes the CTS 0006 IB ideal for driving nonlinear resistive loads such as incandescent lamps. The circuit also requires only one power supply for functional operation.

FEATURES
1. Output short circuit protected.
2. Extremely low drift rate: .5 mV/sec typ. with .01 μF teflon capacitor.
3. TTL or DTL compatible logic input.
4. Operates with just ±15V or with ±15V and a separate +5V logic supply for improved noise immunity.
5. Voltage offset adjustable to zero using a 10K pot with wiper at V−.
6. Military grade processing per MIL-STD-883.
7. Pin-for-pin replacement for LH 0023.

The CTS 0023 ZB is a high performance sample and hold circuit that exhibits an extremely low drift rate. Some typical applications include: Sampled Data Systems, D/A Deglitchers, Analog De-Multiplexers and A/D inputs.

The CTS 861 GB is a cermet hybrid integrated circuit. This wideband amplifier is intended primarily for use as one stage of a log IF amplifier, with midband frequency of 10 MHz to 100 MHz. It has a voltage gain of typically 12 dB, which is flat to within .6 dB typically from 30 to 100 MHz. These units have RF output which is limited to .5V typical and can be directly coupled to the following stage. The detector has current output which makes possible the direct summing of several output stages.

The CTS 0024 GB is a very wide bandwidth, high slew rate operational amplifier intended to fulfill a wide variety of high speed applications such as buffers to A to D and D to A converters and high speed comparators. The device exhibits useful gain in excess of 50 MHz making it possible to use in video applications requiring higher gain accuracy than is usually associated with such amplifiers. It is plug-in compatible with LH 0024.

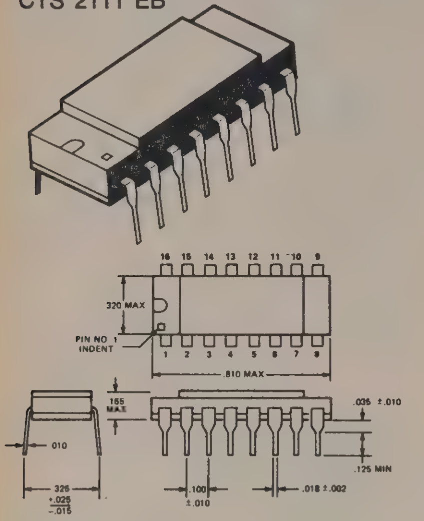
OPERATIONAL AMPLIFIERS

DUAL VOLTAGE COMPARATOR/ CTS 2111 EB



FEATURES
1. Short circuit protection.
2. Offset null capability.
3. Large common-mode and differential voltage range.
4. Low power consumption
5. Options on high reliability processing.
7. Moisture less than 1000 ppm.
8. Solderability shall conform to MIL-STD-883B, Method 2003.

The CTS 2111 EB Dual Voltage Comparator consists of two 111 type voltage comparators in a single hermetic package. The 111 voltage comparator has input currents approximately a hundred times lower than devices like the uA710. They are designed to operate over a wider range of supply voltages; from standard ±15V Op Amp supplies down to the single 5V supply used for IC logic. The output is compatible to RTL, DTL, and TTL as well as MOS circuits. Further, it can drive lamps or relays, switching voltages up to 50V at currents as high as 50 mA.

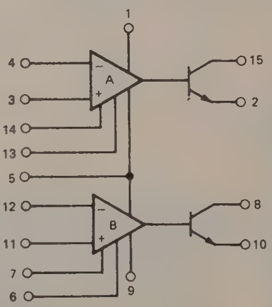
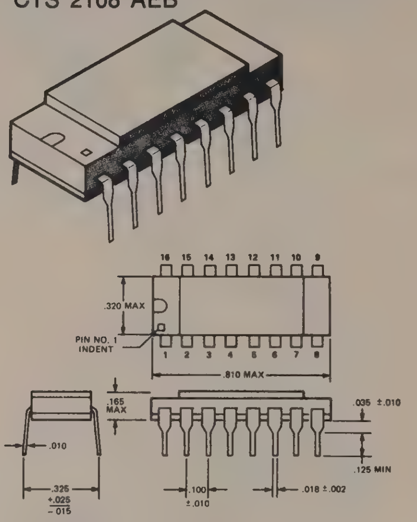
14. Balance/Strobe A
15. Output A
16. NC



NOTE 1: The Dual-In-Line package must be derated based on a thermal resistance of 100°C/W, junction to ambient.
NOTE 2: This rating applies for ±15V supplies. The positive input voltage limit is 30V above the negative supply. The negative input voltage limit is equal to the negative supply, whichever is less.

DUAL OPERATIONAL AMPLIFIER/ CTS 2108 AEB



FEATURES
1. Maximum input bias current of 3.0 nA over temperature.
2. Offset voltage less than .5 mV.
3. Offset current less than 400 pA over temperature.
4. Low supply current.
5. Drift 5 μV/°C.
6. Options on high reliability processing.
7. Moisture less than 1000 ppm.
8. Solderability shall conform to MIL-STD-883B, Method 2003.

The CTS 2108 AEB Dual Operational Amplifier consists of two 108A type Op Amps in a single hermetic package. The 108A Op Amp is a precision operational amplifier featuring low input currents and extremely low offset voltage, making it possible in most cases, to eliminate offset adjustments.

SCHEMATIC DIAGRAM

PIN CONFIGURATION

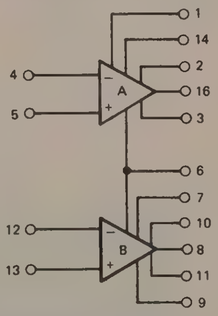
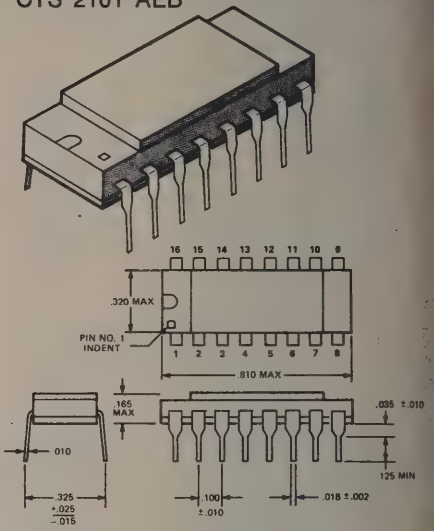
15. NC
16. Output A



NOTE 1: The Dual-In-Line package must be derated based on a thermal resistance of 100°C/W, junction to ambient.
NOTE 2: The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.
NOTE 3: For supply voltage less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

DUAL OPERATIONAL AMPLIFIER/ CTS 2101 AEB



FEATURES
1. Short circuit protection.
2. Offset null capability.
3. Large common-mode and differential voltage range.
4. Low power consumption.
5. No latch up.
6. Options on high reliability processing.
7. Moisture less than 1000 ppm.
8. Solderability shall conform to MIL-STD-883B, Method 2003.

The CTS 2101 AEB Dual Operational Amplifier consists of two 101A type Op Amps in a single hermetic package. The 101A Op Amp is a general purpose operational amplifier featuring high gain, short circuit protection, simplified compensation and excellent temperature stability.

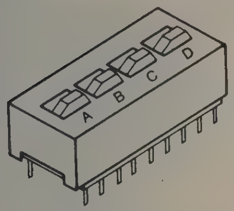
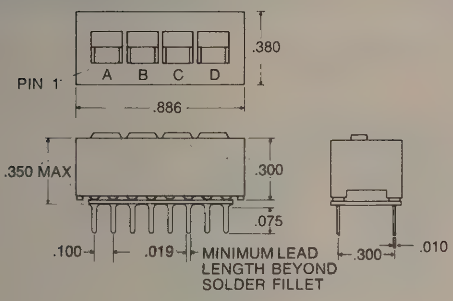
ATTENUATORS
DIP ATTENUATOR/SERIES 196



NOTES:
1. Refer to drawing above and to schematic below.
2. Switch positions as shown have all attenuators in.
3. Dimensions shown are nominal.



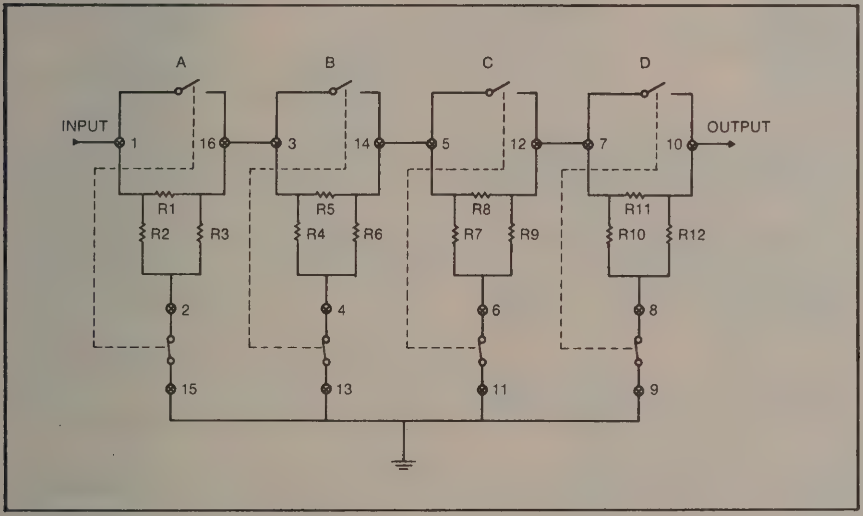
The 196 Series is a very reliable replacement for thumbwheel switch-type attenuators providing substantial cost savings. It is available with a bottom-seal or both top and bottom sealed switch. When ordering or requesting pricing please specify seal type, part number, and attenuation option required. For example:

"196600-02 top and bottom seal" is a totally sealed 600 ohm 1, 2, 4, and 8 dB attenuator. "196075-04 bottom seal" is a 75 ohm attenuator with bottom seal and 2, 4, 8, and 16 dB attenuation values.

The 196 Series Switchable Attenuator is available in 75 Ohm and 600 Ohms and is in a standard DIP package. Attenuators are 600 Ohm or 75 Ohm unbalanced PI or T configuration networks. Standard attenuators are available in values ranging from .1 dB to 16 dB in increments of .1 dB to 2 dB. This product can be designed to meet your attenuation characteristics. The following are some popular attenuation values:

OPTION VAR.	ATTENUATOR SECTION A	B	C	D
-01-	.1	.2	.4	.8
-02-	1	2	4	8
-03-	1.6	3.2	6.4	12.8
-04-	2	4	8	16
-05-	.25	.5	1	2
-06-	1.5	3	6	12

UNBALANCED "PI" ATTENUATOR

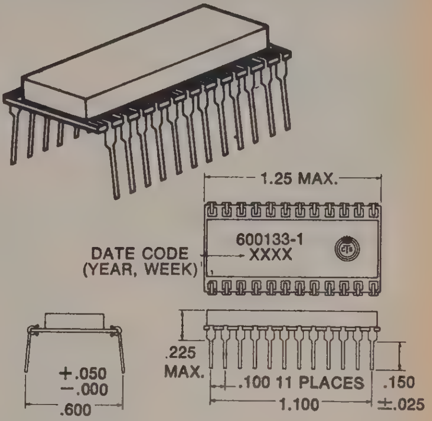


NOTE 1: Switch positions are with all attenuators in.
NOTE 2: × indicates switch terminals.
NOTE 3: Interconnections shown by heavy lines are typical.

Attenuation Range (see note 1)	Individual Attenuation Tolerance dB		Attenuation Range (see note 1)	Individual Attenuation Tolerance dB		Attenuation Range (see note 1)	Individual Attenuation Tolerance dB	
	75 ohm	600 ohm		75 ohm	600 ohm		75 ohm	600 ohm
≤.8 dB	±.0125	±.0125	4 dB	±.040	±.025	12 dB	±.090	±.050
≤2 dB	±.025	±.025	6 dB	±.054	±.025	16 dB	±.105	±.050
3 dB	±.029	±.025	8 dB	±.070	±.025	20 dB	±.115	±.050

NOTE 1: Please consult the factory for other attenuation values available between .1 dB and 20 dB.
NOTE 2: The maximum cumulative tolerance for any combination of attenuations from different ranges may be calculated by summing the individual attenuator tolerances.

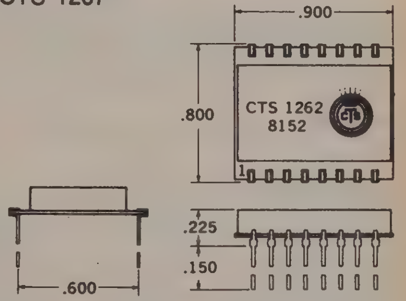
PCM TRANSMIT FILTER/ CTS 600133
PCM RECEIVE FILTER/CTS 600134



The 600133 is a modified fifth order elliptic lowpass filter which passes frequencies to 3.2 kHz and attenuates all stopband frequencies above 4.5 kHz. The 600133 is a plug in replacement for the National AF133.

The 600134 is a modified fifth order elliptic lowpass filter which passes frequencies to 3.2 kHz while compensating for the (SIN X) /X response and attenuates stopband frequencies above 4.5 kHz. The 600134 is a plug in replacement for the National AF134.

300 BAUD FSK TRANSMIT HYBRID/ CTS 1262
300 BAUD FSK RECEIVE HYBRID/ CTS 1267



The CTS 1262 is a switchable bandpass transmit filter which includes a duplexer (two-to-four wire converter) and a voltage-controlled squelch. The part is fully electrically compatible (pin-for-pin) with Cermetek's CH 1262. It is intended for use between an FSK modulator and the telephone line in 103/113-type modems.

The CTS 1267 is a switchable bandpass/ bandreject filter and a soft-limiter/amplifier. The part is fully electrically compatible (pin-for-pin) with Cermetek's CH 1267. It is intended for use between a telephone line, data coupler, or line hybrid and an FSK demodulator in 103/113-type modems.

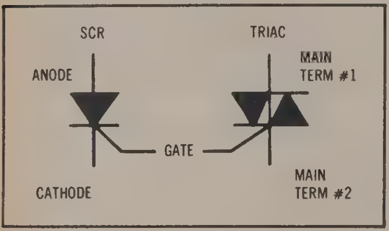
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

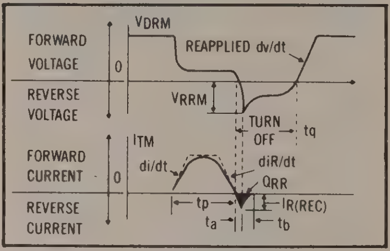


Fig. 1. Concurrent voltage and current waveforms

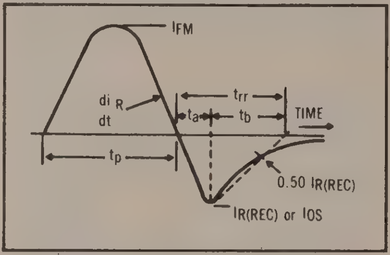

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$: *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature*.

$T_{J(MAX)}$: *Maximum allowable junction temp*.

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

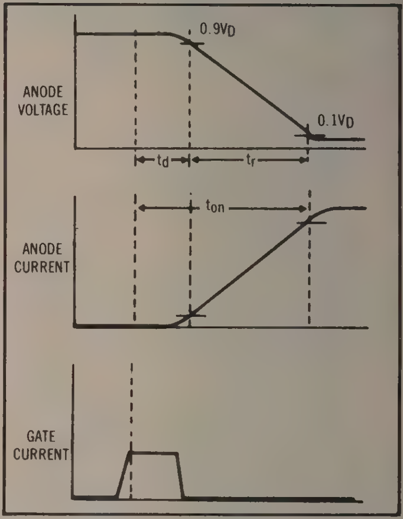

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time*. Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

élantec

HIGH PERFORMANCE ANALOG IC's GUARANTEED.

ELH0002 • ELH0021 • ELH0032 • ELH0033 • ELH0041 • ELH0101

From Elantec. Wide band, high slew rate operational amplifiers. High speed buffers. High current output amps. And more.

The ironclad guarantee. If any Elantec amplifier fails to perform to Elantec's published specifications, we'll replace it. And give you an additional part. Free.

Commercial or MIL STD-883. All MIL STD-883 devices are 100% made in the U.S.A. And, if special testing or processing is required, we'll work with you every step of the way.

Off-the-shelf availability. You'll find stocking distributors of Elantec devices throughout North America. And the world.

Answers when you need them. When you call Elantec, you'll get answers. Fast. Data sheets. Technical assistance. Test procedures. Everything. Because we don't just pay lip service to quality and service. We guarantee them.

Need parts fast? Call us for the name of your nearest stocking distributor. Or, TWX us at 910-997-0649. We'll solve the problem. With élan.

GORDOS ARKANSAS

I/O MODULES
(Thick Film Hybrid)

Gordos is the first manufacturer of I/O modules to offer the higher reliability and cost advantages of hybrid construction. Each module is functionally trimmed and optimized during manufacture — for module-to-module uniformity in the field. For use in harsh environments, Gordos thick film technology also affords superior thermal properties, noise immunity, and shock and vibration resistance.

- 5, 15, or 24 volt logic compatible
- Up to 280 VAC or 200 VDC line voltages
- 600V blocking and VDE specs available
- 2500 VAC photo isolation
- Zero voltage turn-on (AC output)
- Excellent surge protection
- Component values laser trimmed to ±0.3%
- Room temperature encapsulation
- Single hold-down screw
- −30° to 80°C temperature range
- UL recognized and CSA certified
- VDE I/O modules that comply with VDE specs 0730, 0730 part 2P, 0806, and IEC Specs 380 and 435 are available. Add a "V" to the end of the part number to designate VDE (Not available in DC versions)

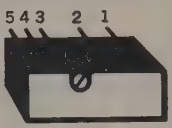
Allowable Input for no Output(9)	3.0	2.0	mA
Allowable Input for no Output	50	50	Vrms/VDC

DC INPUT MODULE
(White Module)



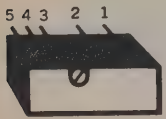
PIN DESIGNATION

Pin 1	+ DC input
Pin 2	− DC input
Pin 3	Logic supply voltage
Pin 4	Output
Pin 5	Logic ground

Parameter	IDC5	IDC15	IDC24	Units
Output Specifications(1)				
Nominal Logic Supply Voltage	5.0	15	24	VDC
Maximum Logic Supply Voltage	6.0	18	30	VDC
Minimum Logic Supply Voltage	2.75	12	20	VDC
Maximum Logic Supply Current(6)	16	16	16	mADC
Maximum Logic Supply Leakage Current	10	10	10	µADC
Maximum Output Voltage(7)	30	30	30	VDC
Maximum Output Current	50	50	50	mADC
Maximum Output Leakage Current	10	10	10	µADC
Maximum Output Voltage Drop	100	100	100	mVDC
Input Specifications(1)				
Maximum Input Voltage	32	32	32	VDC
Minimum Input Voltage	3.3	3.3	3.3	VDC
Input Resistance(3)	1K	1K	1K	Ohms
Maximum Input Current(4)	32	32	32	mADC
Drop-Out Current	1.0	1.0	1.0	mADC
Allowable Input for no Output(5)	1.5	1.5	1.5	mADC
Allowable Input for no Output	2.0	2.0	2.0	VDC

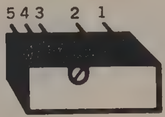
FOOTNOTES:
(1) Specifications apply to T_a −30 to +80°C unless otherwise noted.
(3) Does not include IRED impedance (drop).
(4) At 32 VDC input.
(5) Series operation with GORDOS ODC modules is permitted.
(6) With external LED indicator. 18 mADC without external LED.
(7) Breakdown voltage of output transistor.
(8) Gordos IAC modules will operate on AC or DC input voltage.
(9) Series operation with Gordos standard OAC modules is permitted. Does not include 'A' versions.

BUFFERED AC INPUT MODULES



Parameter	IACB	IACBA	Units
Output Specifications(1)			
Minimum Logic Supply Voltage	3.3	3.3	VDC
Maximum Logic Supply Voltage	26.5	26.5	VDC
Maximum Logic Supply Current	14	14	mADC
Max. Logic Supply Leakage Current(4)	100	100	µADC
Maximum Output Voltage(5)	30	30	VDC
Maximum Output Current	50	50	mADC
Maximum Output Leakage Current(6)	100	100	µADC
Maximum Output Voltage Drop	400	400	mVDC
Maximum Turn-On Time(7)	20	20	mSec
Maximum Turn-Off Time(7)	20	20	mSec
Input Specifications(1)			
Nominal Input Voltage	120	240	Vrms
Maximum Input Voltage	140	280	Vrms
Minimum Input Voltage	90	90	Vrms
Maximum Input Current(3)	10	10	mArms
Drop-Out Current	2.0	2.0	mArms
Allowable Input for no Output	1.5	1.5	mArms
Allowable Input for no Output	50	100	Vrms

BUFFERED DC INPUT MODULES



Parameter	IDCB	Units
Output Specifications(1)		
Minimum Logic Supply Voltage	3.3	VDC

I/O MODULES

RANDOM TURN-ON AC OUTPUT MODULES

Parameter	OAC5RN OAC15RN OAC24RN	OAC5ARN OAC15ARN OAC24ARN	Units
Output Specifications[1]			
Nominal Line Voltage	120	240	Vrms
Minimum Line Voltage	12	24	Vrms
Maximum Line Voltage	140	280	Vrms
Maximum Peak Off-State Voltage	400	600	Vpeak
Maximum Off-State Leakage[5]	1.5	3.0	mArms
Static (Off-State) DV/DT	250	250	V/μSec
Maximum On-State Current[6]	4.0	4.0	Arms
Minimum On-State Current	.05	.05	Arms
Maximum One Cycle Surge[7]	150	150	Apeak
Peak On-State Voltage Drop[8]	1.6	1.6	Vpeak

Parameter	OAC5RN OAC5ARN	OAC15RN OAC15ARN	OAC24RN OAC24ARN	Units
Input Specifications[1]				
Nominal Input Voltage	5.0	15	24	VDC
Minimum Turn-On Voltage	3.0	9.0	18	VDC
Maximum Input Voltage	8.0	18	32	VDC
Drop Out Voltage	1.0	1.0	1.0	VDC
Maximum Input Current[3]	18	16	12	mADC
Nominal Input Resistance[4]	235	1K	2K	Ohms

FOOTNOTES:

[1] Specifications apply to T_A −30 to +80°C unless otherwise noted.
[3] At nominal input voltage.
[4] Does not include IRED impedance (drop).
[5] At T_A of 25°C and maximum line voltage.
[6] At T_A of 40°C, derate 67 mA/°C to 80°C.
[7] At T_A of 25°C, non repetitive.
[8] At T_A of 25°C and maximum on-state current.

NOISE IMMUNE AC OUTPUT MODULES

Parameter	OAC5N OAC15N OAC24N	OAC5AN OAC15AN OAC24AN	Units
Output Specifications[1]			
Nominal Line Voltage	120	240	Vrms
Minimum Line Voltage	12	24	Vrms

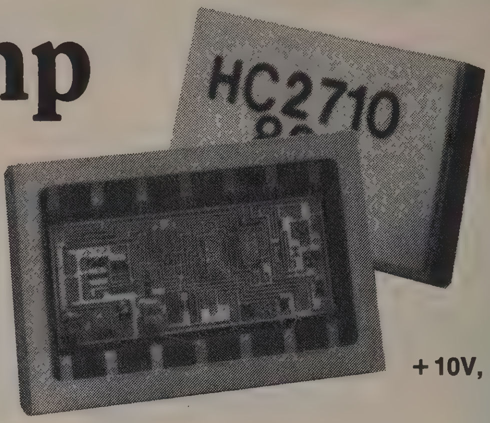
Today's New HyComp Delivers



Precision Thin-Film
VOLTAGE REFERENCES

+10V, −10V, ±10V

FEATURES

- **MIL-STD-883C** and industrial versions
- Excellent **thermal stability** over temperature (to ±1 ppm/°C)
- **Fully guaranteed** to ±10mA output over full operating temperature range
- Short circuit **protected**
- **No need** for external temperature-stabilizing elements
- Available in **several packages** (hermetically sealed 14 pin DIP, leadless chip carrier, flatpacks)
- Proprietary **Nichrome** resistors, **laser** trimming and **stabilization**

PARAMETERS	MODEL →	HC2700/2720/2701/2702	HC2710/2721/2711/2712

NOTES:
1. Measured from 25°C to T (min) and 25°C to T (max).
2. Temperature drift ±5ppm/°C outside the −25°C to +85°C range.
3. For specified load regulation.
4. For specified temperature drift.

Thin-Film
CUSTOM HYBRIDS

HyComp designs, manufactures and screens custom hybrids for industrial and MIL-STD-883C requirements. Whatever you need, including:

- **Stable Instrumentation Amplifiers:** Variable gain; accurate to 0.01%
- **Complete A/D and D/A Converters:** 8-, thru 12-bit models
- **Precision Signal Filtering:** Anti-Alias, Low Pass, High Pass and Bandpass precision filters
- **Specialized signal gain functions:** Computer-controlled amplifiers

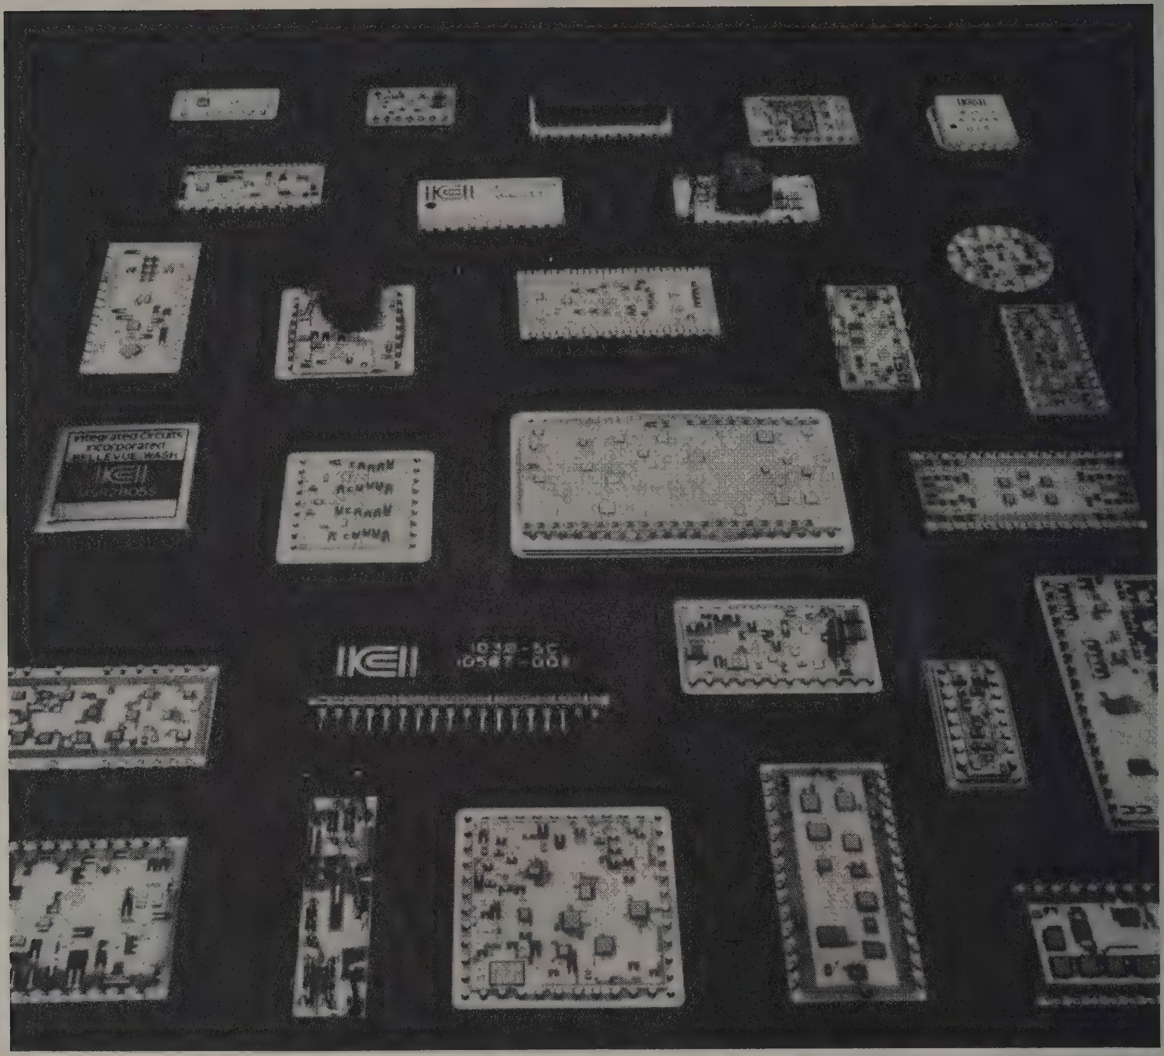
Integrated Circuits Incorporated

CUSTOM HYBRID CIRCUITS



Producing high quality custom hybrid circuits is an art no one learns overnight. And producing circuitry consistently recognized as the finest in the industry takes years.

That's the secret behind the success of Integrated Circuits Incorporated. Building custom thick-film hybrid circuits has been our specialty since 1969. And we've used all of that experience to perfect our expertise in not only technical capabilities and quality, but also in program management and customer coordination.

We can design a circuit to your specification, or convert your circuit to a miniature hybrid design. Either way, it must pass the rigid quality assurance requirements basic at ICI - MIL-I-45208, MIL-STD-883, MIL-M-38510, and MIL-Q-9858 as applicable.

For military, airborne or industrial requirements, you'll find ICI to be responsive, capable and reliable.

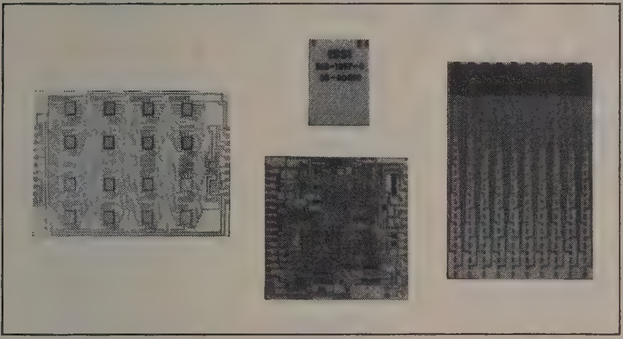
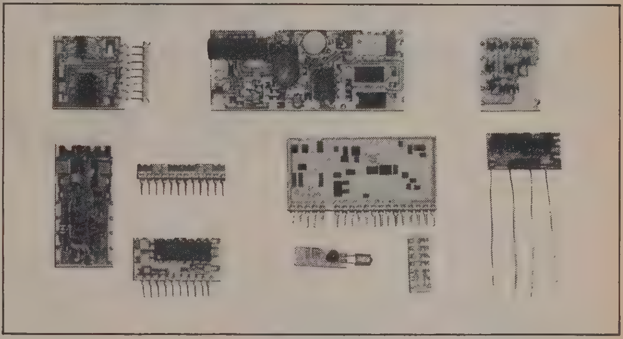
HYBRID THICK FILM TECHNOLOGY

FEATURES

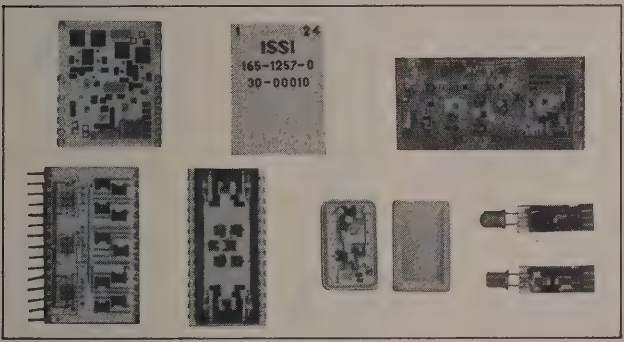
- one time insertion costs
- functional modularity
- high quality components
- compact
- low profile
- low mass
- high performance
- small
- extreme temperature operating range
- military specification capabilities



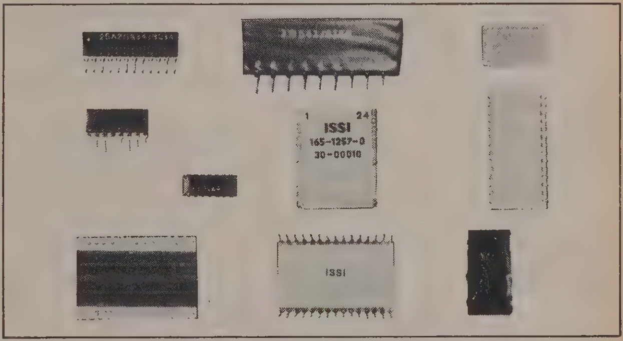
METALIZED SUBSTRATES—Simple or complex, single or multi-layer conductor patterns with Pd. Ag (Palladium Silver), Pt. Ag. (Platinum Silver), Au, (Gold), Pt. Au. (Platinum Gold) inks. Insulation with high temperature glass dielectric or low temperature glaze. Film Resistors from 1 ohm to 150 megohm, tolerances to ±0.1%, T.C.R. to 50 ppm, 1/10 w to 10 watt power dissipation, laser or abrasive trimming.



SOLDER REFLOW TECHNOLOGY—Compact networks with thick film resistors, IC packages, chip capacitors, inductors, discrete components, SOT package, diode bridge assembly, high and low temperature solder, standard or custom pinouts. Special devices with photo-transistors, LED's and functional sub-assemblies.



CHIP AND WIRE TECHNOLOGY—Microcircuit assembly of functional thin film integrated circuit or component chips into operational devices. All available IC & component chips assembled to a thick film circuit by solder or epoxy bonding. Chips wired into circuit with either gold or aluminum wire. (Thermocompression or thermosonic wire bonding). Special handling for static control. Components actively or passively trimmed to guarantee functional specifications.



CUSTOM PACKAGES—Single-in-line or Dual-in-line pinout packages, conformally coated, metal can, plastic or ceramic covered and sealed. Customer markings as well as manufacturer's identification for traceability. Leak tested, temperature cycling and burn-in before final test to insure reliability. Heat sink attached to either alumina or beryllium oxide to obtain maximum power dissipation.

TECHNICAL SERVICES

• Circuit design • layout (including conversion of existing circuitry to thick film technology) • material selection • rubylith production • screen fabrication • product tooling • product testing • and building to print. Testing includes functional electrical and mechanical parameters • burn-in • leak testing • and temperature cycling.

APPLICATIONS

• Memory • logic • linear circuits • A-D • D-A • timing • filters • isolation • pulse shaping • impedance matching • signal generation • switching • sequencing • and many other medium range energy dissipation functions or a combination thereof.

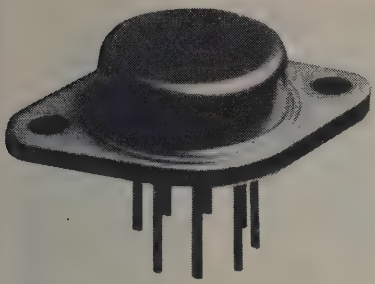
IXYS
SOLUTIONS FOR POWER CONTROL

3685 ENOCHS
SANTA CLARA, CA 95051
TELEPHONE: (408) 733-4045

XPC PWM-CONTROLLERS



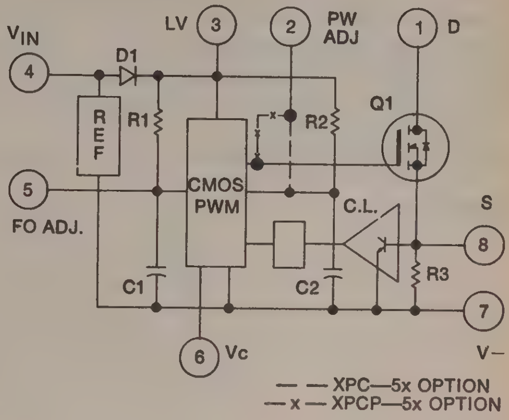
FEATURES:

- CMOS contoller directly coupled to Power-MOS Switch
- Internal Power-MOS catch diode
- Full frequency and duty cycle adjustibility
- Adjustable current limit
- XPCP High Power Option for external paralleling of Power MOSFETS
- Internal thermal shutdown
- Remote shutdown
- Low noise low ground leakage construction
- Internally set for 100KHz operation
- Operational to 250KHz
- High efficiency operation; controller requires less than 2mA for 100KHz operation
- Standard package and heat sink Isolated case

DESCRIPTION

The XPC-5X series are power control circuits with internal CMOS PWM controller and Power MOS switch having 100V, 450V or 850V ratings in a hermetically sealed 8 pin TO-3 package. It facilitates the design of advanced DC to DC converters, Switch Mode Power Supplies (SMPS), servo closed loop control systems and PWM amplifiers/controllers. The controller is internally set for 100 kHz operation, but is adjustable downwards or upwards to 250 kHz. The power MOSFET and controller are electrically isolated from the case to minimize noise and capacitive coupling to ground. The low dissipation controller can be fed via a capacitor from the AC line directly. An optional configuration (XPCP-5X) allows driving external Power MOSFET devices for higher power applications — at the expense of PW adjustability.

EQUIVALENT SCHEMATIC



APPLICATIONS

- Off-Line applications
- DC-DC converters
- Servo switch mode control system
- Switch Mode Power Supplies with lowest component count
- Motion Control
- Temperature Control
- Battery based power control
- PWM-Controller/Regulator circuit designs
- XPCP High Power Option

ORDERING INFORMATION

Part Number	Max. MOS Rating
XPC-5H	100V @ 10A
XPC-5T	450V @ 3A
XPC-5X	800V @ 2A

ABSOLUTE MAXIMUM RATINGS (Tc=25°C unless otherwise specified)

PARAMETER	SYMBOL	XPC-5H	XPC-5T	XPC-5X	UNITS

LEACH® CONTROL PRODUCTS DIVISION

HYBRID CIRCUITS

60 YEARS OF EXCELLENCE . . . . .

LEACH, CPD has consistently demonstrated its excellence in the design, development and manufacture of high quality, thick film hybrid microcircuits for aerospace, military and industrial applications. These high reliability hybrids are currently used on the Space Shuttle, B-1B, navigation satellites, missiles, numerous airborne systems and other similarly demanding applications.

LEACH continues its committment to excellence thru:

DESIGN: .... Proven excellence in the design of multi-layer hybrids using both analog and digital integrated circuits, with "State of the Art" products for 1553B Data Bus requirements, crystal controlled programmable timing arrays, low noise pre-amps, and line drivers satisfy the most exacting applications. Customers are provided with engineering assistance for hybrid circuit applications, specification requirements, and circuit design.

MANUFACTURE: .... Fabrication to various NASA and MIL-STD-883 specification is available. Production can handle both high volume commercial and high reliability space and military projects.

QUALITY ASSURANCE .... Established to a MIL-Q-9858 level, the quality program meets or exceeds those requirements relative to MIL-M-38510, MIL-STD-883, MIL-STD-1772, and other customer specifications as required.

TESTING .... Testing capabilities include complete automated electrical testing from chip probing to computerized functional device testing. In addition, LEACH has the ability to perform shock, vibration, thermal cycling, burn-in and life tests to MIL-STD-202 and MIL-STD-883, Method 5008.

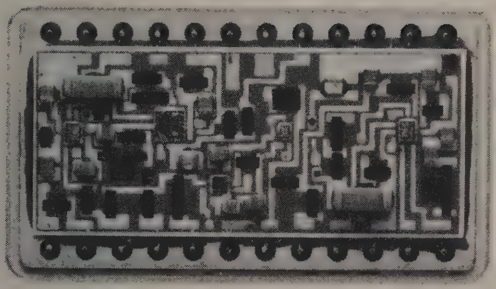
HISTORY OF HIGH QUALITY ELECTRONICS

The need for high quality thick film hybrid microcircuits for aerospace and military applications lead to Leach Corporation's entry into the field in the early 1970's. The initial 400 square foot engineering lab has evolved into a 22,000 square foot facility housing both engineering and total manufacturing capabilities.

Products include both analog and digital circuitry for interface and switching applications, and consist of both proprietary Leach products and customer designed custom hybrids.



MANAGEMENT PHILOSOPHY

Primarily designed for high reliability applications, products are manufactured to MIL-STD-883 requirements. Military environmental specifications and criteria are standard Leach practice, and products are qualified to MIL-R-83726, MIL-M-38510, and NASA standards.

ENVIRONMENTAL TESTING / QUALITY CONTROL

Within a building separate from the manufacturing area, the environmental test lab continuously maintains Leach QPL listings and conducts qualification testing to customer requirements.

Testing in accordance with MIL-STD-202 includes:

- Sine vibration with concurrent temperature testing
- Shock
- Altitude/temperature altitude
- Thermal shock and temperature cycling
- Load and life testing

HYBRID MANUFACTURING FACILITIES

Total facilities for all aspects of thick film hybrid manufacturing as well as hybrid/electromechanical interfacing are contained within the manufacturing area.

- Screen and firing
- Trimming
- Wire bonding
- Eutectic and epoxy die bonding
- Reflow soldering
- Photo processing
- Computerized testing of hardware
- Laminar flow benches
- Inert storage atmosphere

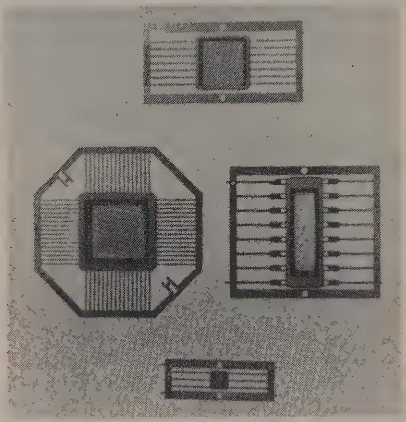
GLASS FLATPACKS & CHIP-CARRIERS



- Most economical means of hermetically enclosing small hybrids
- Easily and economically customized to your needs
- Meet MIL-M-38510 requirements
- Sealed by reflow soldering with combination lids

SELECTION GUIDE

Case Size: Flatpack — case sizes ⅛″ x ⅛″ to 1″ x 1″; Dual-In-Line — case size ¼″ x ¾″

Glass Free Area: Flatpack — .040″ x .070″ to .810″ x .810″

Number of Leads: 1 to 84, depending on case size

Lead Centers: .050″, .040″, .030″, or as specified

Configuration: Leads and pads on 2 sides; Leads on 2 sides; Pads on 4 sides; Leads and pads on 4 sides

Base Material: Metal, ceramic, or beryllia

Plating: Gold or Nickel, all over or selective

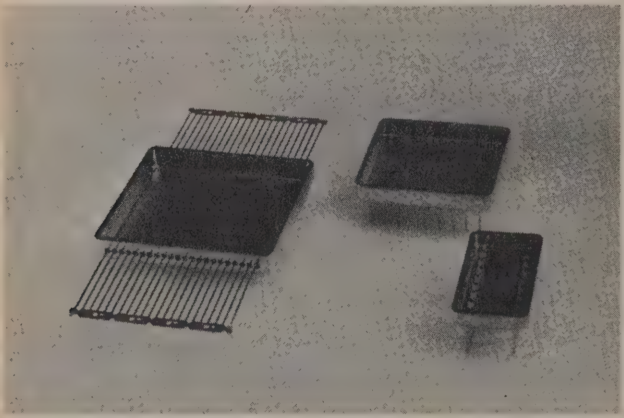
AVAILABILITY

Popular Packages — 2 weeks

Custom Packages — 8 weeks

WRITE FOR OUR DETAILED CATALOG

METAL PLUG-INS AND FLATPACKS



- Strongest and most reliable means of enclosing all size hybrids
- Package variations available built to your requirements
- Meet MIL-M-38510 Class S and all highest reliability requirements
- Sealed by seam welding with stepped lids or reflow combination lids

SELECTION GUIDE

Case Size: Plug-In and Flatpack case sizes ranging from .380″ x .625″ to 1.970″ x 2.970″

Number Pins/Leads: 1 to 188, depending on case size

Pin/Lead Centers: .100″ Plug-In; .050″ Flatpack

Configuration: Pins/Leads on 1, 2, 3, or 4 sides

Plating: Gold or Nickel, all over or selective

AVAILABILITY

Tooled Packages — 4 weeks

Custom Packages — 10 weeks

MOS LOGIC AND SPECIAL FUNCTIONS

LOGIC FAMILIES

SERIES MC54/74HCxxx — The newest addition to Motorola's CMOS logic families, these SSI and MSI functions offer over 100 device types to serve the high performance user. These devices incorporate the LSTTL features of wide fanout and high speed and the CMOS features of low power consumption and high noise immunity. These devices have pinout configurations identical with many of the popular 54/74 series LSTTL and MC14000 series CMOS devices. Devices are available in both −40 to 85°C and −55 to 125°C temperature ranges.

SERIES MC14000/MC14500 — These standard lines of MSI/SSI circuits contain a complement of nearly 200 device types with which to implement complete system designs. They feature the JEDEC B-Series specifications with low-power-Schottky compatible outputs. A faster nonbuffered line of devices is compatible with the B-Series, as well as with standard Schottky TTL, for mix-and-match versatility.

SPECIAL FUNCTIONS

SERIES MC14400 AND MC145000 SERIES — This series of higher complexity dedicated LSI devices consist of single-chip "subsystems" designed for specific applications. Most circuits utilize the latest wafer processing techniques in silicon-gate technology for higher performance. Included in the family of dedicated LSI functions are the following 7 groups or sub-families.

GENERAL PURPOSE FREQUENCY SYNTHESIZERS — Phase-locked loop and programmable divider variations are available in either single or dual modulus configurations. This group offers up to 25 MHz typical input frequency and a programmable reference divider. Parallel, serial, or 4-bit data bus input formats are available with the feature of an on-board reference oscillator.

TV/CATV PLL FREQUENCY SYNTHESIZERS — This family of specific purpose frequency synthesizers are designed for TV/CATV uses. They include circuitry for keyboard scan, both up and down. They operate from a 5 volt power supply. All products have an on-board reference oscillator with full remote control capability. Included in the design is the capability of programming 100 channels in various signalling formats.

CMOS DATA CONVERSION CIRCUITS — A full line of A/D converter products are available in single slope, dual slope or successive approximation formats. Multiplexed channels accommodate up to 15 channels. Full MPU compatible (68xx format). Products are available that can offer a full 8 bits of resolution at 1 MHz with 32 μs conversion times. DACs are also available.

OP AMPS AND COMPARATORS — This family is available with operational amplifier and comparator separately or both on the same chip. The devices are all internally compensated and also offer very low input current <1 nA. Bias currents are externally programmable.

CMOS DISPLAY DRIVERS — These devices can drive LED, LCD, or VF display segments. CMOS technology means very low power dissipation but each device can produce very high current drive. A master/slave combination can drive 48 segments (master) and 44 segments (slave). Segments or dot patterns can be driven up to 1 sq. centimeter in size.

REMOTE CONTROL ENCODER/DECODER PAIRS — This group pairs a transmitter and a receiver for full remote control applications. Decoder configurations can be 5 address/4 data, 4 address/5 data or all 9 address. The decoder can interpret up to 19,683 different codes.

CMOS SMOKE DETECTORS — Smoke detectors are popular for both residential or industrial uses. The package is a small 16-pin DIP with very low power consumption. They are ideal for battery applications. A smoke alarm is triggered via external transducer and internal "on-chip" drivers for lights, horns and other detector unit functions.

INTEGRATED CIRCUITS FOR TOMORROW'S TELECOMMUNICATION

(MOS AND BIPOLAR)

TELECOMMUNICATIONS

Motorola offers a comprehensive line of telecommunications products, including a broad family of modems and modem filters, crosspoint switches, and filters. To service the growing office automation market, Motorola's monocircuits, Time Slot Assigner Circuits (TSACs), Continuously Variable Slope Delta Modulator/Demodulators (CVSDs), and advance voice/data ICs are available. Dialers, ringers, and complete telephone sets are designed to accommodate the rapidly expanding telephone market.

MEMORIES
Selector Guide
RAMs

Motorola has developed a very broad range of reliable MOS and bipolar memories for virtually any digital data processing system application.

New Motorola memories are being introduced continually. **This selector guide lists all those available as of May 1984.** For later releases, additional technical information or pricing, contact your nearest authorized Motorola distributor or Motorola sales office.

Data sheets may be obtained from your in-plant VSMF Data Center, distributors, Motorola sales office or by writing to:

Literature Distribution Center
Motorola Semiconductor Products Inc.

THE M68000 FAMILY — AN INVESTMENT IN THE FUTURE

16-Bit Microprocessor Family

Led by the MC68000 Microprocessing Unit (MPU) and followed by a host of peripherals, the M68000 Family offers the engineer a set of building blocks to construct cost-effective solutions to an ever-widening range of complex 16/32 bit applications. The tremendous popularity of the M68000 Family is not without warrant. HMOS technology, performance, and support are but a few of the many reasons why the M68000 Family continues to be the 16 bit industry leader.

It should be noted that the M68000 Family is a not-so-distant relative of the MC6800. All M6800 Family peripherals interface directly with the MC68000, so upward compatibility is built in. Where low cost and medium performance are required, they present a very attractive alternative. The plan for the M68000 Family is a simple one. Provide the marketplace with the best 16-bit family and back it up with support that is second to none. And it's happening now.

What about expandability? The M68000 Family is designed with this in mind. All the way from an internally microcoded 32-bit architecture to the third-generation EXORmacs development system. Efficient high level language support provided by Pascal allows upward compatibility of software from 8-bit to 16-bit to 32-bit machines.

The majority of today's 16-bit microprocessor applications are quite complex, with long design times. Clearly, the required investment in design resources requires finished products to have increased longevity. Motorola understands this, and is committed to offering a family which will allow these products to remain state-of-the-art for years to come. Thus, the M68000 Family is an investment in the future.

BIPOLAR DIGITAL LOGIC FAMILIES

MECL INTEGRATED CIRCUITS

Motorola's Emitter Coupled Logic (MECL) is a nonsaturating form of digital logic which eliminates transistor storage time as a speed limiting characteristic, permitting very high-speed operation.

Family Characteristics

MECL 10K

Trends in large high-speed systems demonstrated the need for an easy to use logic family with 2.0 ns propagation delays. To fill this requirement, Motorola introduced the MECL 10K series, which has become the industry standard for high-speed applications.

MECL 10KH

Motorola's new MECL 10KH family features 100% improvement in propagation delay and clock speeds while maintaining power supply current equal to MECL 10K. This new MECL family is voltage compensated which allows guaranteed dc and switching parameters over a ±5.0% power supply range.

MECL III

MECL III, with its 1.0 ns gate propagation delays and greater than 1.0 GHz flip-flop toggle rates, remains the industry leader.

SCHOTTKY TTL INTEGRATED CIRCUITS

Low Power Schottky LS TTL has become the industry standard logic in recent years, replacing the original 7400 TTL with lower power and higher speeds. In addition to offering standard LS TTL circuits, Motorola offers the advanced versions of ALS and FAST.

Family Characteristics

LS TTL

The Low Power Schottky (LS TTL) family combines a current and power reduction improvement over standard 7400 TTL by a factor of 5. This is accomplished by using Schottky diode clamping to prevent saturation and advanced processing.

ALS TTL

The Advanced Low Power Schottky TTL family (ALS TTL) provides a 50% power reduction compared to standard 54/74 LS TTL and yet offers improved circuit performance over standard LS due to Motorola's state-of-the-art oxide isolated process (MOSAIC).

FAST TTL

The FAST Schottky TTL family provides a 75–80% power reduction compared to standard Schottky (54/74 S) TTL and yet offers a 20–40% improvement in circuit performance over the standard Schottky due to the MOSAIC process.

The three Schottky TTL families are compared in the table below. Variations are shown for both commercial and military versions within each product family.

Other Logic Families

MHTL Series MC660 — for use in equipment designed for high-noise environments.

MDTL Series MC830/930 — An early logic family manufactured primarily for replacement purposes.

PLL Series — Motorola offers the designer an array of devices to perform phase-locked loop functions, such as phase detectors, dividers, and oscillators. These devices include both TTL and MECL (MC12000/12500) technologies.

SPEED/POWER CHARACTERISTICS FOR (MECL)(1)

BIPOLAR DIGITAL LOGIC FAMILIES

BIPOLAR AND HCMOS MACROCELL ARRAY FAMILIES

The logical approach for proprietary application-specific LSI/VLSI

High Performance ALS-TTL-Compatible Macrocell Arrays

In addition to standard logic lines, Motorola also offers a variety of TTL-compatible Macrocell Arrays. These products provide a means for developing economical custom LSI/VLSI logic circuits. Performance is achieved by the combination of an advanced MOSAIC I (Motorola Oxide-Isolated Self-Aligned Implanted Circuit) oxide isolated bipolar integrated circuit process and a series gated emitter-coupled logic (ECL) macrocell circuit technology. Input and output circuits provide level translation to and from the internal array logic for standard TTL/MOS interface.

ECL 10,000 Macrocell Array Family

The Macrocell Array Concept combines a pre-diffused array of components with computer-aided design techniques to offer system designers a rapid, cost-effective means for implementing semi-custom, high-speed digital logic systems with VLSI circuitry.

Compared with equivalent systems developed with discrete logic (separately packed SSI/MSI logic functions) the high packing density of the Macrocell array chip offers up to 100-to-1 reduction in system component count, with a power dissipation improvement (reduction) of as much as 12 to 1.

MECL Macrocell Array family members presently consist of the MCA1200ECL (68 Pin) Array, the MCA600ECL (28, 40 and 68 Pin) Array, and the MCA2500ECL (149 Pin) Array.

HCMOS Macrocell Array Family

The HCA6300 Series Macrocell Arrays are fabricated using a 3.0 µ silicon gate CMOS dual level metal technology. This technology allows for the high speed performance of Schottky TTL while maintaining the high noise immunity and low power consumption of CMOS.

A macrocell library provides a selection of fully characterized logic functions, similar to an IC data book. Using the library, a designer can draw schematics for LSI macrocell array circuits similar to drawing printed circuit board schematics. The only restrictions are that designs are limited to logic functions that can be implemented using the library, the number of primary cells on the array, and the number of available signal pins.

Motorola's Computer Aided Design system is the engineering design interface between Motorola and customers for developing macrocell circuits (options). Customers can access the CAD system either from terminals at their own location or a Motorola Regional CAD Design Center, in both cases using phone lines or data communication networks. The CAD software contains programs to assist in each stage of option design, as well as special programs to catch syntactical errors or design violations during the design procedure rather than at test.

The CAD system is common to both the HCA6300 Series HCMOS Macrocell Arrays and the MCA II Series Bipolar Macrocell Arrays such that designing with one array is only "cosmetically" different from designing with another. Motorola offers families of ECL, ALS and HCMOS array products so that array size, performance, power dissipation, and package can be optimized to match system requirements.

Compared with gate arrays, the macrocell array approach, which makes use of higher component density and more efficiently designed logic elements (macros), yields a substantial improvement in performance (circuit speed), while a greater utilization of on-chip components reduces potential system costs.

UNIVERSAL MICROPROCESSOR POWER SUPPLY CONTROLLER

The TCA5600, TCF5600 is a versatile power supply control circuit for microprocessor based systems and mainly intended for automotive applications and battery powered instruments. To cover a wide range of applications, the device offers high circuit flexibility with minimum of external components.

Functions included in this IC are a temperature compensated voltage reference, on chip dc/dc converter, programmable and remote controlled voltage regulator, fixed 5.0 V supply voltage regulator with external PNP power device, undervoltage detection circuit, power-on RESET delay and watchdog feature for orderly microprocessor operations.

VOLTAGE REGULATORS

Switching Regulators

These cost-effective ICs are designed to improve reliability and performance by providing all necessary circuit functions to control various configurations of off-line and dc to dc switching regulators through pulse-width modulation (PWM).

CONTROL IC FOR LINE ISOLATED FREE RUNNING FLYBACK CONVERTER

TDA4600

The bipolar integrated circuit TDA4600 drives, regulates and monitors the switching transistor in power supplies based on the free oscillating flyback converter principle.

Wide regulating range and the high-voltage stability during large load changes provides excellent switch mode performance in hi-fi equipment, active loudspeakers, as well as applications in TV receivers and video recorders.

The TDA4600 is available in a 9-pin SIP plastic medium-power package. The ambient temperature range is from −15°C to +85°C.

OPERATIONAL AMPLIFIERS

HIGH SLEW RATE, WIDE BANDWIDTH, SINGLE SUPPLY QUAD OPERATIONAL AMPLIFIER

MC34074,A
MC35074,A
MC33074,A

A standard low-cost Bipolar technology with innovative design concepts is employed for the MC34074 series of monolithic quad operational amplifiers. These devices offer 4.5 MHz of gain bandwidth product, 13 V/μs slew rate, and fast settling time without the use of JFET device technology. In addition, low input offset voltage can economically be achieved. Although these devices can be operated from split supplies, they are particularly suited for single supply operation, since the common mode input voltage range includes ground potential (V_{EE}). The all NPN output stage, characterized by no deadband crossover distortion and large output voltage swing, also provides high capacitive drive capability, excellent phase and gain margins, low open-loop high frequency output impedance and symmetrical source/sink ac frequency response.

The MC34074/33074/35074 series of devices are available in standard or prime performance (A Suffix) grades and specified over commercial, industrial/vehicular or military temperature ranges.

TRIMFET is a trademark of Motorola Inc.

Features

- Wide Bandwidth: 4.5 MHz
- High Slew Rate: 13 V/μs
- Fast Settling Time: 1.1 μs to 0.10%
- Wide Single Supply Operating Range: 3.0 to 44 Volts
- Wide Input Common Mode Range Including Ground (V_{EE})
- Low Input Offset Voltage: 2.0 mV Maximum (A Suffix)
- Large Output Voltage Swing: −14.7 V to +14.0 V for V_S = ±15 V
- Large Capacitance Drive Capability: 0 to 10,000 pF
- Low T.H.D. Distortion: 0.02%
- Excellent Phase Margins: 60°
- Excellent Gain Margin: 12 dB

Technology Leadership In Synchro Converters

Natel offers the widest selection of synchro-to-digital and digital-to-synchro converters...as well as synchro instrumentation.

And...Natel means more than technological superiority in standard products. It also stands for the best in Custom Hybrids. Our new, expanded, automated, class 10,000 hybrid facility is at your disposal...fully MIL qualified, and ready for volume production.

Call or write for our product line, 3-ring binder and/or our facilities brochure.

PICONICS

HYBRID MICROCIRCUITS
THICK FILM — THIN FILM — HYBRIDS

Piconics, an innovative microtechnology company has developed an extensive in-house hybrid capability. This capability encompasses hybrid microcircuit design and layout, thick film processing, thin film precision resistor technology and assembly. The assembly area utilizes both chip and wire as well as SMD reflow techniques in both hermetic (parallel seam seal welding) as well as non-hermetic packaging.

Our *in house* Quality Assurance test capability covers hermeticity (gross and fine), shock, vibration, moisture, burn-in, x-ray and most other common military screening tests. Documentation can be provided if necessary.

With Piconics full technology in-house options, we can select your hybrid circuit to the most advantageous cost effective production methods.

Our full source capability provides a choice by combining the best features of thick film, thin film and hybrid assembly technologies.

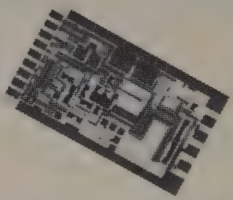
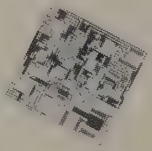
THICK FILM



FEATURES:
Gold, Platinum Gold, Palladium Silver, Silver Conductors
Solderable, Wire Bondable Conductor
Multi-Layer Capability
Resistor Range: 1 ohm to 100 megohm
Tolerance ta: ± .5% Absolute
Adaptable to Standard Assembly Methods
Glazed or Unglazed Resistor Films
Beryllia Subtrates for Higher Power Available

THIN FILM
PRECISION NICHROME THIN FILM



FEATURES:
Gold Conductors
Passivated or non-passivated
TCR: ± 25 ppm — can be tailored to ± 5 ppm within this range
TC Tracking: 1-2 ppm
Tolerance: ta ± .1% Absolute
(Value Dependent) Ratio to 12 Bit accuracy (.005%)
Noise: <– 35 dB Johnson Noise
Stability: Absolute <.1% with 150°C Bake
<.2% with 200°C Bake
Value Range: 2 ohm to 10 megohm

HYBRID

FEATURES:
Thermosonic Automatic Gold Ball Bonds
Eutectic or Epoxy Chip Mount
SMD Solder Capability
Parallel Seam Seal Welding (Hermetic)
Laser Trim Capability
Full In-House Environmental Lab
Hermeticity, Shock, Vibration, Moisture, X-Ray, etc.

Over 30 Years as a Supplier to the Military/Industrial RF Markets.

RF FILTERS, MULTIPLEXERS, CONVERTERS, POWER AMPLIFIERS, MULTIPLIERS, SIGNAL SOURCES, MULTICOUPLERS and COMPLETE RF SYSTEMS.

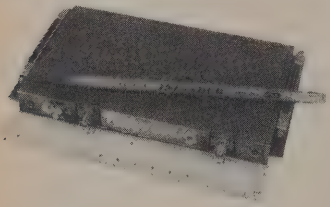
MULTIPLIERS

FREQUENCY GENERATION THROUGH MULTIPLICATION OR PHASE-LOCK TECHNIQUES/VHF to Ku-Band (10 MHz to 1.5 GHz)

Applied Research offers many proven designs using either technique or combinations. And we're capable of meeting your exact requirements, precisely.

Our Phase-lock loops, comprised of I.C. components, together with RF devices, yield outputs of up to 10 watts at microwave frequencies. And our multipliers are available as passive devices or in combination with amplifiers having multiplication factors of from 2 to 2000. In combination with varactor multiplier devices output in Ku-band can be obtained.

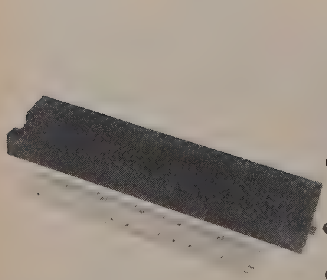
What's more, we can supply crystal oscillators, or internal drivers to provide a self-contained source.



Frequency sources with mutiplication up to 29 and multiples thereof are available deriving signals in the L, S, and C-bands.

ELECTRICAL CHARACTERISTICS (TYPICAL)

- Input Frequency: 100 MHz ±10 MHz
- Output Frequency:
  Type-1, 6400 MHz (X64)
  Type 2, 5800 MHz (X58)
- RF Power
  Input Power: +5 dBm, ±3 dB
  Output Power: +5 dBm, ±2 dBm over temperature
- Discrete spurious outputs: Harmonics below −60 dBc, others at a maximum of −60 dBc.
- Temperature: −54°C to +85°C



ELECTRICAL CHARACTERISTICS
C-BAND PASSIVE BROADBAND HIGH POWER MULTIPLIERS

- Input Power: +40 dBm
  Output Power: +32.6 dBm ±0.5 dB
- Spurious Response: >−70 dBc inband
- Bandwidth: 5.9 to 6.4 GHz

MULTICOUPLERS

Multicoupler Model HFM-2 (TX)-230-8-40 is one of a series of multicouplers designed and manufactured by Applied Research Inc. This model, operating over a frequency range of 2 to 32 MHz, has 8 to 32 independent outputs for inputs of up to +20 dBm.

PERFORMANCE SPECIFICATIONS
Frequency Range: 0.5 to 32 MHz
Number of Outputs: Up to 32
Isolation Between Outputs: To be specified by customer — Up to 70 db.
Overall Gain (Input to Output): 0 dB
Connectors: To be specified by customer.

The HFM Series covers the frequency range of 0.5 MHz to the Telemetery Bands, and has been designed for applications where weight and space are critical such as submarine, shipboard, or mobile installations.

MODEL	NO. OF OUTPUTS	FREQUENCY RANGE
HFM-2(TX)0532 8/40	6 to 32	500 KHz-32 MHz
HFM-2(TX)232 8/40	6 to 32	2 MHz-32 MHz
HFM-2(TX)140 12/40	6 to 32	10 MHz-400 MHz
HFM-2(TX)2410 8/40	6 to 32	20 MHz-1100 MHz
HFM-2(TX)1415 6/50	6 to 32	1400 MHz-1600 MHz
HFM-2(TX)2223 8/50	6 to 32	2200 MHz-2300 MHz
HFM-2(TX)1423 8/50	6 to 32	1400 MHz-2300 MHz

SOLID STATE TRANSMITTERS and POWER AMPLIFIERS in P, L, S and C BANDS.

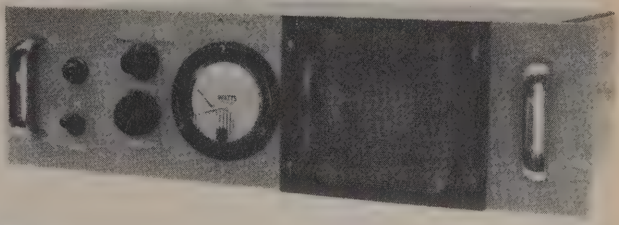
TRANSMITTERS

Transmitter (P/N 504488)

RF OUTPUT
Range: 400-550 MHz
Control: Field Tuneable in 0.5 MHz increments
DC/AC Power: 24-30 volts at 9 amperes/115/230 VAC 5/2 Amps

Stability: ±0.005%
Power: 30 watts, minimum
MODULATION: Frequency Modulation

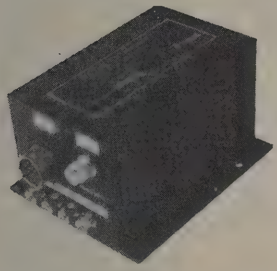
POWER AMPLIFIERS



200 Watt RF Power Amplifier (P/N 504495)

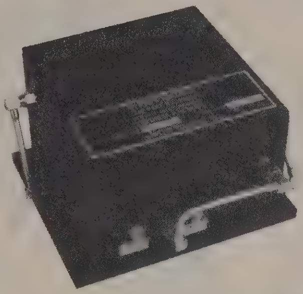
Frequency Range: 400 to 550 MHz

AEROSPACE COMPONENTS



L-BAND TRANSMITTER

Frequency: Tunable, 1650-1670 MHz
Power Output: +28 dBm min.
Modulation: FM; 1-35 KHz
Stability: ±3 MHz
Power Input: +22 to +34 VDC, .75A max.
Weight: 1 kg max.



G-BAND RECEIVER

Frequency: 4.4 to 5.0 GHz*
Stability: ±.005%
Sensitivity: −90 dBm for 10 dB S/N and ±250 KHz deviation
IF Bandwidth: 1 MHz nominal
Power Input: +21 to 30 volts, .75A max.
Weight: 3.5 lbs. max.
* Factory set

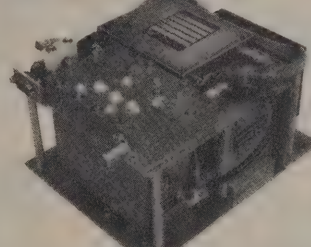
FIXED PAD ATTENTUATORS & TERMINATIONS (DC-2GHz)

FOR TYPES BNC, TNC, C, N, AND OSM CONNECTORS

Integrated line of fixed pad attenuators, terminations, and impedance-matching transformers provides means for rapid and accurate division of voltages over the frequency range of DC-2 GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

GENERAL CHARACTERICTICS
Frequency Range: DC-2 GHz
VSWR: 1.25:1
Attenuation Accuracy:
−0.1 dB +0.3 dB for values of 1 to 12 dB
−0.2 dB +0.5 dB for values of 15 to 20 dB
Impedances (Nominal): 50, 75 90 ohms
Attenuation Values:
1, 2, 3, 4, 6, 10, 12, 15, 20 dB (standard).
Other values up to 30 dB Special

TELEMETRY CONVERTERS



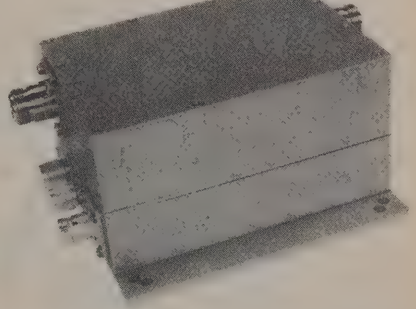
Down converters for military and commercial application are available throughout the frequency range from VHF to K-band. Applied Research manufacturers the filters, oscillator sources, the IF amplifiers, and complete packages that are associated with down converters.

These units permit the ready adapting of existing UHF telemetry receiving equipment for use in the 1435 to 1540 and 2200 to 2300 MHz telemetry band with high conversion gain.

GENERAL CHARACTERISTICS
Long Term Stability: Better than ±.1 PPM over temperature range
Image Rejection: >50 dB
Noise Figure: Better than 5 dB for 100 mc bandwidth (2.2 to 2.3 GHz)

Converters meeting special requirements which include group delay or phase and amplitude characteristics can be designed to meet special needs.

MULTIPLEXERS



State of the Art Multiplexers, applying Applied Research Inc.'s experience in the design and manufacture of NOTCH FILTERS, BANDPASS FILTERS, and BAND REJECT FILTERS allows for the ultimate in performance.

TYPICAL TRIPLEXER CHARACTERISTICS
Frequency Range: 5 kHz to 500 MHz
Frequency Breaks: 500 kHz and 32 MHz
Passband Attenuation: 1.5 dB maximum
Crossover Losses: 4.5 dB maximum
Reject Characteristics: 42 dB minimum, other bands
Ripple: 0.5 dB peak to peak maximum
Impedance: All ports shall be 50 ohms unbalanced
VSWR: 1.5:1 maximum, 2:1 through crossover

DAICO

MIC SWITCHES

The M.I.C. (Microwave Integrated Circuits) Switches are built utilizing Daico's inhouse Hi-Rel Thin Film Technology, which provides excellent stability over temperature extremes. All switches are encased in shielded hermetic enclosures providing maximum protection to the circuitry with minimum RF leakage. The switches include drivers compatible with TTL or CMOS. Frequency ranges from DC-6000 MHz with isolation over 75 dB are available.

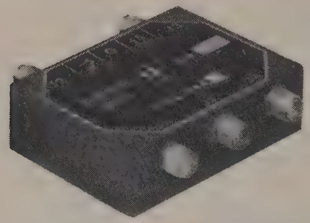
CONNECTORIZED SOLID STATE RF SWITCHES



The Solid State Connectorized Switches are available with SMA connectors. Units with BNC, TNC or N type connectors are offered on special order. Frequency ranges from DC-2000 MHz with switching speeds from 15 nano-seconds are obtainable. Switches with RF peak power to 3000 watts with reduced switching speed are also available.

DAICO HIGH SPEED RF SWITCHES

HIGH SPEED MIC SWITCHES

Daico's High Speed Switches are available in both M.I.C. (Microwave Integrated Circuit) as well as connectorized form. Switching speeds as low as 15 nanoseconds are available. The M.I.C. units are packaged in hermetic DIP configurations, while the connectorized units have SMA connectors for convenient cable attachment.

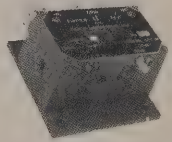
DAICO HIGH POWER RF SWITCHES



The Daico High Power RF Switches handle peak power to 3000 watts with CW power to 1000 watts. Frequency ranges from 1-2000 MHz are available. These High Power Diode Switches have been used successfully in numerous CW and pulse systems.

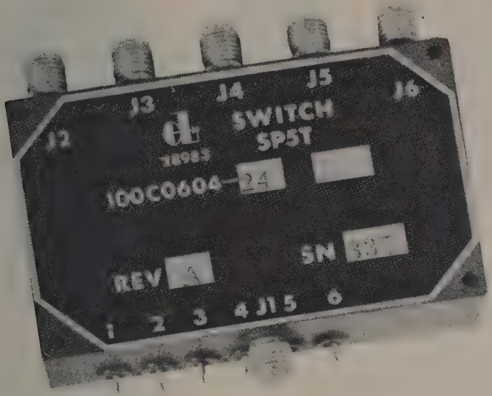
DAICO

RF RELAYS



Daico Industries RF relays employ hermetically sealed switching elements which provide extreme resistance to the severe environments encountered in military aircraft and communications systems, including 20 g's vibration to 3 kHz, 80 g's shock and altitude in excess of 100,000 ft. A continual test and evaluation program assures switch performance in excess of 20 million operations. These units are operable at extremely low current levels and may be ordered with 6-, 12-, 18- or 24-volt coils.

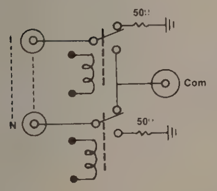
Switching Speed: 5 millisec. max

RF Power: 50W CW, 50W Peak

Drive Current: 24 mills nom. at 24 VDC. Other coils available include 6, 12, 18 VDC.



Units can be provided with Fail Safe (no power) to a through path.

Can be operated directly from TTL with integrated circuit 75450 Dual Driver, 54 45 Decoder or equivalent.

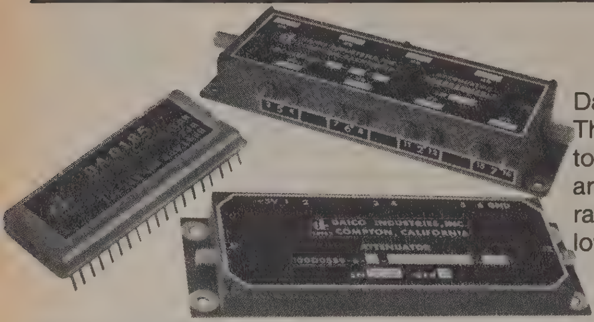
DAICO

STEP ATTENUATORS



Daico's complete line of Programmable Step Attentuators include Thin Film M.I.C. (Microwave Integrated Circuits), Solid State Connectorized, as well as RF Relay Control. Binary steps from 1 through 10 are available with total attenuation values to 111 dB. Frequency ranges from DC to 2350 MHz are covered with switching speeds as low as 25 nanoseconds.

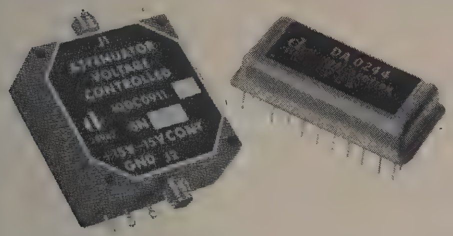
VOLTAGE CONTROLLED ATTENUATORS

DAICO



The Daico Voltage Controlled Attenuators are available both as M.I.C. (Microwave Integrated Circuits) as well as in Solid State Connectorized form. Linearity of ±.75 dB from best straight line is achieved with frequency ranging from 10 to 1300 MHz. Constant impedance of 50 ohms is maintained at input and output ports over full attenuation range. VSWR over band is 1.25 typical.

DAICO

PERFORMANCE NOTES

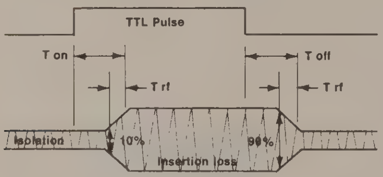
SPECIFICATION FREQUENCY vs. USABLE FREQUENCY

Although a device is designed for optimum characteristics over a specified frequency, the part is functional with slight performance reduction over a broader frequency range. This broader band is the Usable Frequency.

SWITCHING SPEED

A review of the adjacent figure will reveal that the switching time T_{on} is measured from the 50% point of the leading edge of the square wave control (TTL, CMOS or ECL) to the 90% point of the leading edge of the resultant RF envelope. Similarly, T_{off} is measured from the 50% point of the trailing edge of the square wave control pulse to the 10% point of the trailing edge of the resultant RF envelope. Switching speed is defined as the greater of these two values.

Of specific interest is the RF switching envelope which is defined as T_{rf} from 10-90% of the RF envelope. Systems requiring excessively high speed operation occasionally program the switch operation with a delay or anticipatory circuit to be able to accommodate only the T_{rf}. Values of five nanoseconds are readily available.



TRANSIENTS

During the switching of one part to another, video transients are incurred with characteristics that are occasionally disturbing to RF components following the switch. Daico Industries has over the years developed balanced designs which will provide less than 10-15 millivolts of in-band transients at switching speeds (T_{rf}) of 5-10 nanoseconds. Where lower transients are required during the switching period, it is recommended that slow switching speeds be tolerated or discussed with the manufacturer.

ISOLATION

The minimum isolation in dB is the worst case condition over the specification frequency between any two ports, with all other ports terminated in 50 ohms.

INSERTION LOSS

Insertion loss is defined as the worst case path loss between the input port and any output port in the "ON" state with all other ports "OFF" and terminated in 50 ohms. Insertion loss for attenuators is measured with zero or minimum attenuation level from the input to output and is as the reference level for all attenuation values.

NOISE FIGURE

Experience has shown that the Noise Figure (N.F.) of a switch may be assumed to be equal to the Insertion Loss. This assumption can be made without introducing substantial error.

RF POWER

The RF power level (measured in dBm) is the level of CW input power that results in not more than 0.1 dB compression at the output. The maximum RF power level is also the maximum signal level at which the device will meet all RF specifications.

VSWR

The maximum VSWR in a 50 ohm system applies only to the thru condition, unless otherwise specified. Devices with open or short to ground terminations exhibit total refection.

DC POWER

The typical current for the maximum regulated DC supply voltage is listed. Exceeding the DC voltage may damage the device. Nominal ±0.25V.

CONTROL

The driver control circuitry is listed as either TTL or CMOS. TTL devices may be driven directly from system TTL outputs. 5 volt CMOS devices may be driven directly from system TTL outputs with a pull up resistor to +5 volts. Hi-voltage CMOS devices (8 to 15 volts) may be driven with TTL using a pull up resistor to VCC with an open collector transistor, or the 5400 series of Hi-voltage TTL compatible buffers. CMOS control lines should be pulled up to VCC to prevent possible damage to internal drivers.

RF relays may be made TTL compatible using the SN55450 series of relay drivers. See RF DESIGN AIDS.

TERMINATION

Internally terminated switches are so defined.

PACKAGE OR SIZE

The outline configuration is given in inches or standard DIP configurations. The DIP package has .100" pin spacings with .300" pin rows. A DDIP has .600" pin rows.

PHASE SHIFT OF VOLTAGE CONTROLLED ATTENUATORS

The phase shift of Daico VCAs is a function of the attenuation. The phase at the output will vary smoothly from the reference value at minimum attenuation to its maximum value at maximum attenuation. The maximum phase shift for a single section VCA can be as little as a 10° lead at low frequencies to as much as an 80° lead at high frequencies. With some effort the phase vs. attenuation can be held constant to within +2° to +5° (again depending on frequency) at an increase in price of about 20% and some NRE depending upon quantity. We will be pleased to quote on any specific applications.

STEP ATTENUATORS

Actual attenuation value and associated accuracy applies with actual insertion loss subtracted from total attenuation value.

TEMPERATURE

Specifications are applicable from −55°C to +85°C. Some derating of performance may occur when operated over the MIL temperature of −55°C to +125°C.

DESIGN AIDS

DAICO

ELECTRICAL PRECAUTIONS

For a device to operate properly, the body must be connected to RF ground and with a M.I.C. device, the body and unused pins must both be grounded.

All unused ports of a switch should be terminated in 50 ohms to obtain optimum characteristics of the unit.

If a control line is to be at logic "0", it must be grounded.

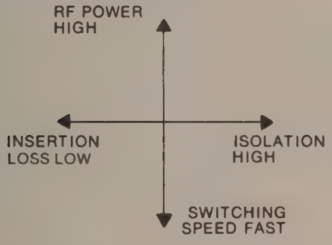
The low current CMOS device drivers are static sensitive and precautions must be exercised to prevent driver damage.

Excess voltage, wrong polarity, or spikes on the DC supply or control lines may damage the device.

Only devices specified as having an all OFF or center position off condition may have all ports OFF. Most devices require one port to be ON at all times for proper operation.

CUSTOM/OPTIMIZED DESIGNS

Daico Industries' engineering department welcomes your inquiry regarding special applications or optimized designs. An approximate guide regarding trade-offs are presented in the attached figure, i.e., high power means lower switching speed: high isolation suggests higher insertion loss.



RF POWER HIGH
INSERTION LOSS LOW
ISOLATION HIGH
SWITCHING SPEED FAST

To switch CMOS Switch control lines with open collector TTL, the above is suggested to avoid damaging the CMOS Driver.

DAICO

QUALITY ASSURANCE

Daico Industries Engineering and Manufacturing teams have proven conclusively that high quality is the most direct and sustaining path to increased profits. Our comprehensive Quality Assurance Program is integrated throughout all the various operational and engineering functions within the company. The quality element in Daico Industries components is planned and built into all the following functions:

- PREPLANNING
  - Customer source control drawing review
  - Contract/P.O. Review
  - Work instruction initiation and maintenance
  - Application Engineering/customer interface
  - Quality engineering/customer interface
- DESIGN
  - Reliability/survivability, designed consideration
  - Engineering model approach
  - Formal design review
  - Standardized process/circuit approach
  - Engineer support/follow up in manufacturing/test
  - MTBF analysis
- MATERIALS
  - Certified high reliability procurements
  - Positive control of non-conforming materials
- MANUFACTURING
  - Comprehensive process controls
  - Quality auditing
  - 100% fab and assembly inspection
  - Formal material review board
  - Quality documentation
  - Positive control of non-conforming material
  - Corrective action system
  - Personnel training and certification
  - State-of-the-art assembly/inspection equipment
  - Automatic, computer-controlled bonding and die attach equipment
- TESTING
  - 100% in-house MIL-STD 883B screening
  - Comprehensive test program (please see chart)
  - Trained/certified technicians
  - State-of-the-art automatic test equipment
  - ATP—Engineering/customer interface

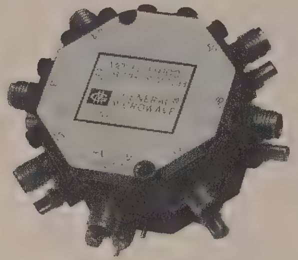
PIN DIODE CONTROL DEVICES FROM GENERAL MICROWAVE

PIN Diode Switches

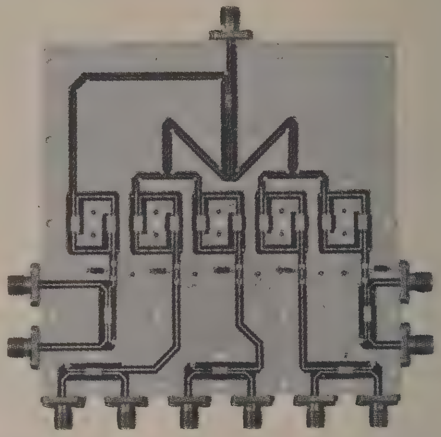


General Microwave's complete line of high performance broadband switches, with and without integral drivers, are available in three basic series.

- Ultra Broadband Series: 0.2 to 18 GHz, SPST to SP5T
- Multi Octave Band - Miniature Series: 0.2 to 4 GHz (Series 92) 2-18 GHz (Series 91); SPST TO SP7T
- Octave Band - High Speed Series: 10 nsec switching speed, 2-18 GHz; SP2T

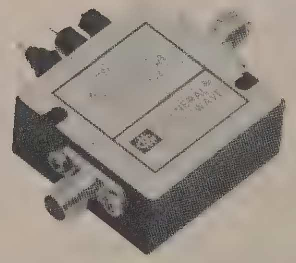
Many models of each type are available to satisfy most requirements. Non-reflective switches, space qualified units and other special designs are also available.

MIC Assemblies



General Microwave MIC assemblies can combine: • Frequency Translators • High Speed Digitally Controlled Attenuators • Power Combiners and Dividers • High Speed Switches • Mixers • Amplifiers • Isolators • Directional Couplers • Phase Modulators • Filters and other signal conditioning and processing devices.

PIN Diode Modulators/ Attenuators



General Microwave's Series of PIN diode modulators/attenuators provide octave-band and greater than octave-band performance from 0.5 to 18 GHz. All at low cost.

Series	Bandwidth	Atten. Range (dB)	Control
D195	Octave	60	Linear Voltage
D196	Multi-octave	60	Linear Voltage
195	Octave	60	Current
M180	Ultra-broadband	60	Linear Voltage

Digitally Programmable PIN Diode Attenuators

GENERAL MICROWAVE
PROGRAMMABLE

General Microwave's Series of Digitally Programmable PIN Diode Attenuators provide octave-band and greater than octave-band performance from 0.2 to 18 GHz with wide programming flexibility. All at low cost. Their compact, rugged packages are well suited to military applications. They are available in drop-in module type configurations and hermetically sealed packages. Nanosecond switching speed modules are also available.

Series	Bandwidth	Atten. Range (dB)	LSB (dB)
329	Octave	80 & 120	0.1
345	Octave	60	0.25
346	Multi-octave	60	0.25
325	Ultra-broadband	120	1.0

Fixed Attenuators

MODEL 50F-XXX-BNC MODEL 50F-XXX-SMA
MODEL 50F-XXX-TNC MODEL 50F-XXX-N

Frequency Range
DC-2000 MHz

Impedance
50 Ohms

Attenuation Values
1 thru 20 dB in any 1 dB increment (XXX) insert value, i.e., 50F-020-BNC, specifies an attenuator with attenuation of 20 dB.

VSWR (Max.)
DC-1000 MHz 1.2:1; 1000-2000 MHz 1.4:1

Accuracy
DC-1000 MHz ± .5 dB; 1000-2000 MHz ± .8 dB

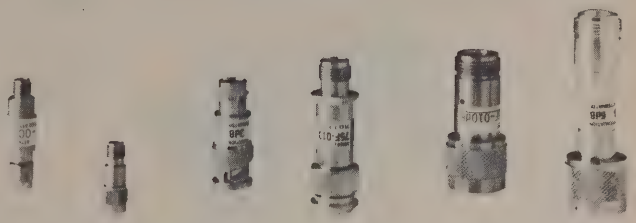
Input Power
1 Watt average

Operating Temperature Range
−20 °C to + 85 °C

Connectors
BNC, TNC, SMA, and N

Dimensions

BNC: Length; $1\frac{13}{32}$,	Body Dia: $\frac{7}{16}$
TNC: Length; $1\frac{15}{16}$,	Body Dia: ½
SMA: Length; $1\frac{13}{32}$,	Body Dia: ⅜
N: Length; 2⅓,	Body Dia: ½



These extremely small, low-cost fixed attenuators provide a flat frequency response and low VSWR.

75 Ohm models are also available.

MODEL 50HF-XXX-SMA

Frequency Range
DC-18 GHz

Impedance
50 Ohms Nominal

Attenuation Values
1 thru 40 dB in any 1 dB increment (XXX) insert value, i.e., 50HF-020-SMA, specifies an attenuator with attenuation of 20 dB.

HIGH QUALITY ATTENUATORS!

Kay switch attenuators are constructed with patended switches using teflon housings and gold plated silver contacts. These high quality switches have been field proven for over 10 years. All Kay attenuators are equipped with precision resistors.

Kay rotary switch attenuators are gold plated printed circuit contact with dual contacts at each connector. This design provides superior electrical contact.

Kay has designed over 200 special attenuators for OEM applications using our extensive design capabilities. We can adapt our current line to fit specific requirements.

Please call or write for our complete attenuator catalog.

OEM PROGRAMMABLE ATTENUATORS

- LOGIC ADAPTORS AVAILABLE

4000 SERIES

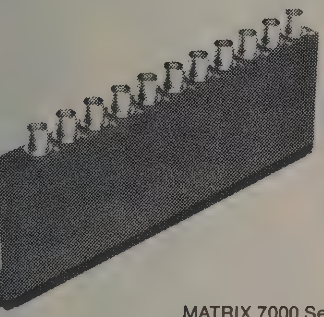
COAXIAL RELAY MODULE



FEATURES

- Two to twenty four throws
- Continuous shield continuity
- Rugged machined aluminum housing
- Crosstalk always less than isolation
- Switchpoints individually field replaceable
- Extremely low EMI
- Low VSWR
- Maitrix configuration easily assembled using 9000 series cross straps
- Signal circuits isolated from control circuitry

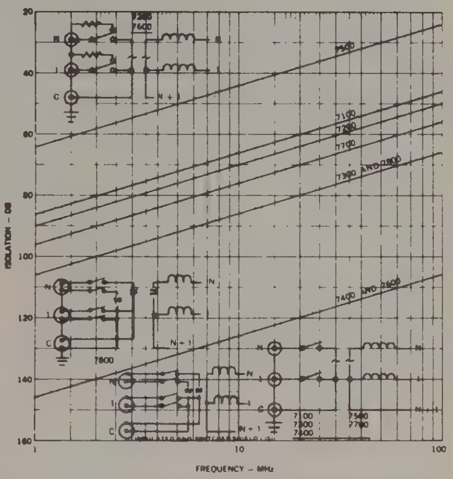
MATRIX 7000 Series Switch Modules are designed to maintain coaxial switching continuity over a wide range of critical and high environmental applications. The switch housings are constructed on precision machined aluminum alloy for structural integrity and hard anodized for durability. All signal shield paths are silver plated with covers gasketed for maximum EMI protection. The basic reed switch elements are hermetically sealed in nitrogen filled gas envelopes and employ rhodium plated contacts to insure non-stick operation. Applications for MATRIX 7000 Series include:

— R.F. and I.F. switching where a low VSWR is required .

— CCTV, base band video and pulse switching where low phase distortion and high pulse fidelity are required.

— Applications requiring a high degree of shielding integrity and low contact and induced noise such as pre amp input switching or the switching of high impedance operational amplifier inputs.

Matrix and hybrid switching systems are easily constructed by using Series 9000 (no output), 9100 (one output) or 9200 (two output) push-on cross straps which mate with the BNC connectors on the switch modules. The cross strap output connectors are BNC female type UG 1094/U. The model number of the cross strap is assigned by replacing the two zeros of the series number with the number of inputs desired. For example, a Model 9108 has eight inputs and one output.



SERIES 7000

7100— Standard
7200— Self-terminating
7300— High isolation
7400— Highest isolation
7500— High power
7600— Highest isolation self-terminating
7700— Mercury wetted contacts
7800— Twinax

MODEL NUMBER ASSIGNMENT

7 X XX -X

Series
Number of throws
Coil suppression diodes — DR
TNC connectors — T
Self-terminating resistance — ohms
Insulated shield — I
Insulated and switched shield — IS
Expander output — E
Chassis mount — C

SPECIFICATIONS

FREQUENCY RANGE:	0 - 300MHz
CHARACTERISTIC IMPEDANCE:	50 ohms - 75 ohm optional
SWITCHING CONFIGURATION:	Single or double pole, two thru twenty four throws
SWITCHING SPEED:	Less than one millisecond
ISOLATION:	See graph
CONTROL - CONNECTOR:	28 VDC,30 MA D type - subminiature connector
SIGNAL CONNECTOR:	BNC - UG1094/U, TNC and SMA optional
OPERATING TEMPERATURE AND HUMIDITY RANGE:	−30°F to + 150°F, 0 to 98 percent R.H.
OPERATING SHOCK AND VIBRATION:	50 G's -1MS,2G's p-p 20-2000 Hz
DIMENSIONS:	.625″ W × 3.25″ H × 1.44″ + .625″ × Number of throws
MOUNTING:	Three 6-32 tapped holes in base

RF/IF signal processing components guide
finding new ways . . .
setting higher standards
Mini-Circuits

at Mini-Circuits
we're dedicated to pursue
product innovations and
improvements to satisfy
our customers' current
and future needs.

finding new ways...
such as a proprietary HTRB
diode-screening technique,
computer-automated performance
data (CAPD) documentation
and off-the-shelf TX mixers.

setting higher standards
with the industry's only 3-year
guaranteed mixers,
+55 dB guaranteed third-order IM mixers,
highest output (1000 mv) phase detectors,
widest bandwidth directional couplers
...just to name a few.

Our committment to
the customer never ends.

ordering information *Federal supply code: 15542*

how to order

Your local representative or distributor is the contact for both sales and service assistance for products listed in this catalog. These local offices have the latest price and delivery information on all models. They can also provide details on ordering procedures, service information and application engineering data.
Your order may be sent directly to Mini-Circuits or to any of the local sales offices listed.
Prices listed in this catalog are domestic F.O.B. Brooklyn, New York. Mini-Circuits reserves the right to change specifications, models, prices or designs without prior notice and without liability for such changes.

shipping instructions

Shipments can be made by either air or surface carriers. If specific shipping instructions do not accompany the order, Mini-Circuits will specify the carrier to be used.

terms

Net 30 days from date of invoice. If credit is not established with Mini-Circuits, shipments will be made C.O.D. (cash on delivery) or prepaid. When sending prepayments, please include freight.

warranty

Scientific Components Corporation, Mini-Circuits division, warrants each product manufactured by Mini-Circuits to meet all published specifications and to be free from defects in material and workmanship. The Company's liability under this warranty is limited to repair, adjustment and/or replacement of defective parts returned, freight paid by Buyer, to the factory within a period of one year from date of shipment from the factory unless a shorter period is specified. International customers may ship to the Company's nearest Distributor.
Damage by misuse or abnormal conditions of operation, or evidence of partial or complete disassembly voids this warranty.
SINCE MINI-CIRCUITS HAS NO CONTROL OVER CONDITIONS OF USE, NO WARRANTY IS MADE OR IMPLIED AS TO SUITABILITY FOR CUSTOMER'S INTENDED USE, BEYOND SUCH PERFORMANCE SPECIFICATIONS AS ARE MADE A PART OF THE PURCHASE ORDER. Equipment shipped F.O.B. Mini-Circuits' plant shall become the property of the Buyer upon delivery to carrier. Damage in shipment should be handled by the Buyer directly with the carrier by immediately requesting carrier's inspection upon evidence of damage in shipment.
A fee will be charged to the Buyer to cover the costs of inspection and test of units returned under this warranty and subsequently found to meet specifications or to be faulty for reasons which are not Mini-Circuits' responsibility. This warranty excludes all other warranties expressed or implied. Mini-Circuits shall not be liable for any special, indirect or consequential damages.

Mini-Circuits

how to use this catalog

Over 1,000 RF/microwave signal-processing components are available to the design engineer from Mini-Circuits. This catalog has been organized to simplify the process of selecting the component best suited to your application and need, to speed location of specs for a particular model, and to provide helpful application assistance.

A complete listing of all the product family groups — from frequency mixers to power splitters to RF transformers — plus warranty and ordering details are found on page 3.

Looking for data on a specific model? Page 4 contains a list of all models in alphabetical/numerical order, available from Mini-Circuits with reference to specific data pages.

For a concise production/test flow diagram illustrating Mini-Circuits quality-control procedures. Turn to pages 6 and 7. Also detailed information on our Hi-Rel, HTRB and TX products for your military, space or rugged industrial applications.

CAPD
now available!
computer-automated performance data
(see technical section)

Computer-automated-performance data (CAPD) is a Mini-Circuits' innovation offering the most complete data base for catalog RF signal-processing components. What's involved in CAPD and its benefits towards your new designs are described on pages 8-13.

"Mastering the Mixer Maze"...
Mixer selection, with hundreds of models to choose from, can be confusing. The penalty for improper selection? Overspecify and pay extra; underspecify and face marginal performance. Read pages 14-15 for a clearly-detailed procedure for choosing the optimum mixer for your needs.

Data pages are grouped by product line. Each data page is organized by series within the product line and by models within the series.

Information given includes CAPD data, National Stock Numbers (NSN), equivalent MIL — part numbers, pin connection designations, case styles, and notes to the tables.

Full technical data for each model is given in table form. The tables are arranged by sequence of model number for each series. The various models within a series differentiate from each other by the frequency range they cover. Frequency range is defined in the tables by the lowest frequency fL to the highest frequency fu. For most models, the frequency range is further subdivided into three segments; L = low range, M = mid range, and U = upper range. Each range L, M, U is defined at the bottom of each table in terms of fL and fu.

Mixer selection is primarily determined by selecting a mixer level suitable for the application. Therefore, to aid the designer, frequency mixers are organized in sequence of mixer level — Level 7, 10, 13, 17, 17S, 23, 23S and 27. A Level 7 mixer operates with +7 dBm LO drive, a Level 13 mixer operates with +13 dBm LO drive, etc. For each level mixer, a maximum RF input level for linear operation is specified.

Power splitters are organized in numerical sequence of power split; from 2 way 0°, 2 way 90°, 2 way 180°, 3-, 4-, 5-, 6-, 8-, 12-, 24-, to 48 way 0°.

Case style and dimensions are easy to find... each data page includes a photo of the particular case style for each series and, within the data, there is reference to case style number and outline drawing letter. Turn to pages 58 to 62 for case style dimensions, tolerances and bracket options where applicable.

For example, the SRA-1 mixer detailed on page 16 calls for case A01. The dimensions and outline drawing are given in the table on page 58 and figure A on page 59.

Need Mini-Circuits components in a hurry? Refer to page 63 for a listing of our world-wide network of sales representatives and distributors ready to serve your needs, supply your orders, and answer your questions promptly and courteously.

reliability and hi-rel components

All Mini-Circuits' RF signal-processing components are subjected to rigid quality control procedures starting from raw material procurement through product production and final inspection; the objective—to supply our customers with the finest RF signal-processing components available. Here's a list of some of the procedures taken to insure high-quality performance and product reliability:

A. 100% testing of each diode.

B. 100% testing of each unit.

C. 100% inspection of every solder connection.

D. All transformers bonded to the header for protection against severe shock and vibration.

E. All diodes, resistors and capacitors bonded to the header for protection against severe shock and vibration conditions.

F. Diode and resistor power dissipation derated greater than 50%.

G. All components rated for greater than + 125°C.

H. All transformer leads double wrapped.

I. Heavy coated wire insulation for HiPot/altitude.

J. Completely encapsulated for protection against mechanical shock and vibration as well as temperature shock.

K. Permanent case marking of model number cannot be removed by cleaning agents.

L. Cupro-Nickel case for long-lasting finish especially under salt atmosphere conditions.

Every unit shipped from Mini-Circuits carries a full-year guarantee; in fact, our industry-standard SRA-1 mixer offers an exclusive three-year guarantee.

High-temperature, Reverse-bias (HTRB) testing is an accelerated-life screening test generally reserved for space applications. Here the Schottky and PIN diodes are subjected to a one-volt negative bias at 150°C for 168 hours. The objective of this accelerated aging stress is to force time/temperature-related failures and thus screen out potentially unreliable devices; in conventional "baking" processes, the diode does not experience anywhere near the stress imposed by the HTRB program. The result: highly-reliable Schottky and PIN diodes ready for wiring into assemblies.

Next, the assembled units are subjected to additional testing procedures including
(1) burn-in for 96 hours at 100°C with 8 ma at 1 KHz
(2) thermal shock per MIL-STD 202, Method 107
(3) Gross and fine leak tests according to MIL-STD 202, Test Method 112B, Conditions A and C

As a consequence of the above HTRB, final seal, and burn-in testing, Mini-Circuits components offer an unprecedented high level of reliability. In fact, Mini-Circuits' industry-standard SRA-1 is the only double-balanced mixer in the world to be offered with an exclusive *three-year* guarantee.

TX mixers

For the most critical space, military or industrial applications in hostile environments, Mini-Circuits offers TX mixers. Stringent screening and stressing are applied to the TX mixers which employ TX hermetically-sealed diodes that have passed the following tests per MIL-STD-750:
(1) high-temperature storage for 340 hours at 150°C, Method 1032; (2) thermal shock, Method 1051, Test Condition C (−65°C to +150°C, 10 cycles); (3) constant acceleration, Method 2006, Y1 orientation, 20,000 G's; (4) fine leak, Method 1071, Condition H; (5) gross leak, Method 1071, Condition C; (6) burn-in for 96 hours at 25°C, 75mW/junction at 60 Hz, Method 1038, Condition B.
Those diodes that pass these rigid tests are then electrically tested to ensure that they meet specifications. They are then assembled into TX mixers which are then further exposed to these stress tests: (1)thermal shock, MIL-STD 202, Method 107; (2) burn-in for 96 hours at 100°C, with 8 ma at 1 KHz; (3) gross and fine leak, MIL-STD 202, Method 112B, Conditions A and C
The SRA-1TX is the first off-the-shelf TX mixer in the industry available for immediate delivery. All other Mini-Circuits' mixers are available with TX screening and testing.

environmental specifications

All MCL components are manufactured under exacting quality assurance and control standards. They will meet or exceed published specifications over the operating temperature range of −54° to +100°C, and after being subjected to any or all of the following physical or environmental tests of MIL-STD 202E which are applicable.

	TEMPERATURE CYCLING: −65° to +125°C	102 C
	ALTITUDE: 656,000 feet	105 G
(2)	HUMIDITY: 90% RH, 65°C	106
	THERMAL SHOCK: −65°C to +125°C	107 B
(1) (2)	SEAL: Less than 10^5 Atm. cc/sec	112 A
	DROP: Random, 45 min.	203
	VIBRATION: 2 to 2,000 cps, 20g, 12 hrs.	204 D
	SOLDER HEAT: 260°C, 10 sec.	210 B
(1)	SOLDERABILITY: 95% coverage	208
	TERMINAL TENSILE STRENGTH: 4½ lbs., 10 sec.	211 A
(1)	TERMINAL FATIGUE: 2 lbs., 3 cycles	211 C
	MECHANICAL SHOCK: 100g, 6ms	213 I
	SOLVENT RESISTANCE: Alcohol, Trichloroethan, Freon	215

NOTE:

(1) These specifications do not apply to coaxial connector models.

(2) Exceptions are non-hermetic case styles 6, 38, 46.

absolute maximum ratings

OPERATING AND STORAGE TEMPERATURE −55°C to +100°C

eliminating guesswork in systems design

CAPD (computer-automated performance data)

Today, RF and Microwave subsystem and system designs must be more precisely detailed as performance demands become more stringent. Radars must be more accurate, communications systems must be more noise-free, and guidance systems must be more rigorous, and all are required to meet quality and reliability levels considered unattainable a decade ago. These new demands place a heavy burden on the design engineer, the project manager, the quality assurance group...and the suppliers of the components to be assembled into these systems. In addition to the stricter performance and reliability specs, the designer faces escalating costs if, at the last stages before system delivery, unexpected surprises occur in the form of spurious signals, high VSWR or other pitfalls not anticipated.

Until now, the designer selected his RF/Microwave components, such as mixers, power splitters, and amplifiers, using manufacturers' data sheets to provide detailed specs, performance curves, and environmental ratings. Indeed, the design engineer did receive a workable package of information to see how his design might proceed...but it was not a detailed, close-up look. The reason is simple—it has just been too expensive to take an enormous number of test points, at a considerable number of specific frequencies, tabulate the results and then repeat at other input levels.

As an example, a two-tone intermodulation distortion chart for mixer performance would require at least 100 measurement points plus 10 additional calibration points and would take an experienced technician at least a half-day to complete.

For those customers who required their data at specific frequencies or under conditions other than is offered on the manufacturers' data sheets, extra charges were justifiably added to offset the additional labor costs.

Now, a new computer-automated performance data (CAPD) service offered exclusively by Mini-Circuits to its customers at no additional charge. Based on over 20 years of RF test experience and six years of engineering manpower-hours, the CAPD service provides detailed specs never available previously on mixer conversion loss, isolation, VSWR and intermod; for directional couplers and power splitters, details on insertion loss, isolation, phase unbalance and VSWR vs. frequency; for amplifiers, VSWR, gain changes and compression point vs frequency. In fact, all Mini-Circuits' products are available with CAPD specs.

test setup is self checking

The heavy investment in CAPD, using a Hewlett-Packard Model 85 computer and HP8566A spectrum analyzer as key elements, allows the previously-mentioned, two-tone IM test to be completed in less than ten minutes compared with the manually performed sequence requiring 4-5 hours. Here's how stringent the computer-automated set up dictates each measurement: each point is measured three times, with a maximum allowable deviation of less than 0.05 dB between the three; otherwise the test is repeated. Before each measurement is taken, the computer checks the reference voltage level for any variation due to line voltage, temperature, etc., changes and compensates as required. Similarly, frequency is monitored before each test and any drift is automatically corrected. Such continuous and rapid inspection and correction ensure highly-reliable CAPD data. And, by using a large number of closely-spaced frequency points for component measurement, effects of narrow-band suck-outs or resonances (often missed with manual test procedures) are immediately identified.

Mini-Circuits P.O. BOX 166, Brooklyn, New York 11235 (212) 934-4500

Mini-Circuits

a close-up view of performance

What's the significance of CAPD to the designer? Is it a sales "gimmick" or is it truly a design tool? Review these points and judge for yourself.

A competent RF/Microwave design engineer, drawing on his experience and expertise over years of varied projects, still must be concerned with unforeseen problems when the prototype is first turned on. Generation of spurious signals, changes in dc offset level, affects of LO drive variations and other vexing problems often become evident to extend delivery time and escalate costs. In many instance, a more precise definition of the component specs could have pinpointed the potential problem areas; with CAPD, it's now possible.

Let's assume you are specifying a double-balanced mixer for a wideband front-end design. Here are a number of profound questions you face:

- In a wideband design, the local oscillator (LO) output might vary over the band and could fall below the level required by the mixer spec. Should you spend additional money to flatten LO output or do you boost LO output if it is not sufficient?... Wouldn't it be valuable to know exactly how performance will be affected since you might find performance acceptable without any additional investment? with CAPD, a close point-by-point printout of key parameters as a function of LO level is available (fig. 1) — now you can make your decision based on a close-up, view of LO drive effects on mixer performance.
- How about VSWR over the full range of receiver specs? Generally, mixer VSWR specs are given at one particular frequency. With manual-test procedures, it's a time-consuming task for the components manufacturer or systems house; with CAPD it's available at no extra charge (fig. 2).
- How does the filter in the design match the mixer IF output and what is the impedance match in-band as well as out-of-band where spurious responses become a threat? CAPD VSWR data tells it all. How will the mixer conversion loss affect receiver sensitivity over the full frequency range? And, how will flatness of conversion loss affect the degree of image rejection in an image-reject mixer? CAPD data (fig. 1) will pinpoint these details.

If the mixer is being used as a phase detector, it may be critical to know how dc offset voltage varies with frequency. Most mixer specs list dc offset at only one frequency; with CAPD, this parameter is given over the full range of frequency (fig 4).

- Harmonic and intermod signals invariably plague your final design. The effects of, for example, a 4th harmonic of the LO mixing with the 5th harmonic of the RF is given on many spec sheets, but at a specific LO and RF level. The effects of LO level changes might be crucial to your design; with manual point-by-point testing, extensive and costly technician test time would be demanded or, more likely, such tests just won't be performed. With CAPD capabilities, such intricate interactions are quickly run, and made available to the designer (fig. 3).

If you are specifying directional couplers and/or power splitter/combiners in your systems, you can now closely examine how VSWR, insertion loss, isolation and amplitude/phase unbalance vary at closely-spaced points over the frequency range of interest, (fig. 5). You can now evaluate the effects of the VSWR of the termination at the S-port and, another industry-first, inspect intermod data of a power splitter caused by saturation of the cores within the unit.

Amplifier performance is clearly shown with CAPD data as a function of dc power supply changes, (fig. 6). You'll be able to closely examine how VSWR, compression point and gain are influenced by dc supply fluctuations; this could reduce your power-supply costs, since it will conveniently point to the degree of voltage regulation required to meet the amplifier performance needed. Also, it's common to furnish amplifier specs over the frequency band of interest, but CAPD testing offers an opportunity to examine the amplifier characteristics, outside the band to foresee the effects of harmonic and spurious signals; for example, an amplifier that is flat to 1200 MHz offers what gain and what VSWR for second-harmonic 2400 MHz signals? Knowing these details can thwart potential systems problems.

Even a relatively common component such as an RF transformer is now available with CAPD data, (fig. 7). The significance...previously insertion loss vs frequency was considered flat over a specified frequency range. With closely spaced CAPD test prints, even slight variations which could affect systems performance become apparent.

CAPD is your microscope

Look at CAPD as a microscope, revealing the "real world" details affecting your design decisions. Most important, CAPD was involved with one uppermost objective—to assist you, the design engineer, in producing a more effective end product. To accomplish this, you may require CAPD data at very specific frequency points not provided by our programmed steps. Not to worry...just furnish us with precise needs for your specific application. Be assured we'll do our best to comply.

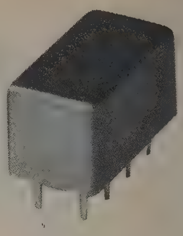
FIG. 6



mastering the mixer maze...

or selecting the right model for your application.

Mixers are abundant in electronic systems ranging from inexpensive consumer products to sophisticated military hardware. You'll find them in video games, TV sets and video cassette recorders as well as communications gear, test instruments, radar units and countermeasure systems. Mini-circuits offers well over a hundred different off-the-shelf models with thousands of variations. Different connector configurations, tighter specs, Hi-Rel options are available on request. Improper mixer selection bears a penalty—underspecify and face marginal performance; overspecify and pay extra for unnecessary performance characteristics.

making the right choice

Simply stated, there are three basic steps—
(1) deciding on a printed-circuit (PC) or connector version, (2) selecting the mixer level required in the applications, and (3) picking a model that extends over the frequency range involved. Sounds simple enough so let's examine some of the details.
The first step involves the decision on whether the mixer will be mounted to a PC board or be connected by cable to other subsystem components. The next two steps require understanding your specific needs; so it is strongly recommended that you organize the requirements for your application and put it in writing. Decide what frequency range is involved, the LO drive available, the level of harmonic and two-tone, third-order intermodulation (IM) distortion you can tolerate and other dynamic range factors, see Fig. 1.

1 dB compression point key to mixer level

What does the 1 dB compression point signify? As RF input level is increased, IF output should follow in a linear manner. However, after a certain point, IF output increases at a lower rate until mixer output becomes fairly constant. The point at which IF output deviates from linearity with RF input 1 dB is termed the 1 dB compression point. This figure is useful in comparing dynamic range, maximum output and two-tone performance of various mixers. It is a basis on which mixer level is established.

The 1 dB compression point, which defines the linearity of a mixer at high RF input levels, is relatively simple to test and thus this parameter is included on data sheets supplied by all mixer manufacturers. But, in real life, mixer linearity may be specified in accordance with the intended application. For example, in a receiver application, two-tone, third-order intermod may be the critical parameter; for TV applications, percent distortion or intercept point may be specified; and in an attenuator measurement system, compression point may be important for a given RF input level. With this in mind, the engineer needs a convenient means to relate the particular parameter for his application with the published spec, the 1 dB compression point.

Fig. 1 lists the various ways mixer linearity might be specified.

FIG. 1

Dynamic range parameters affecting mixer selection

1. maximum RF input level anticipated
2. percent distortion acceptable
3. intercept point
4. Two-tone, 3rd order IM ______________dB
   at ________dBm, RF input
5. 1 dB RF input compression level
6. LO power available
7. none of the above specified

Let's convert every parameter with the published 1 dB compression point and then show how simple it is to select the proper mixer level, *see Fig. 2 for Mini-Circuits' mixer level/1 dB compression point chart.*

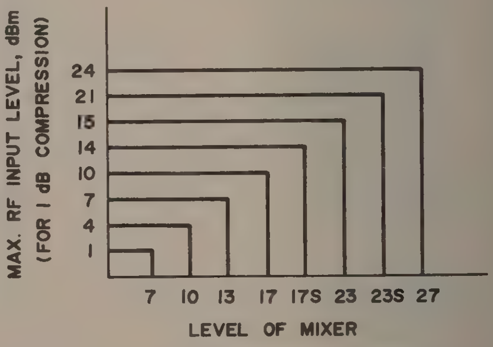


FIG. 2 THE 1 dB COMPRESSION POINT AS A FUNCTION OF THE LEVEL OF MIXER.

1. Maximum RF input level anticipated. If you know this parameter, simply select the lowest level mixer whose maximum RF input level exceeds your requirement. For example, if the maximum encountered RF level is +5 dBm, select a Level 13 mixer, rated at +7 dBm maximum RF input for 1 dB compression point.

2. Percent distortion. The percent distortion is usually specified in voltage. Thus, a 0.1% distortion figure means 0.999 of the input voltage appears at the mixer output. Next, convert this voltage ratio to a power ratio in dB by squaring and taking ten times the log. The resultant figure is the amount of compression for the specified RF input level. Now this must be extrapolated to 1 dB compression for a corresponding RF input level. As a rule of thumb, extrapolation may be achieved by assuming a linear relationship, in dB, between compression and RF input level. So a ten-times increase in compression corresponds to a ten-times increase in RF input level.

Let's illustrate with an example using a 0.1 percent distortion spec at −10 dBm RF input level. The 0.1 percent corresponds to a 0.999 voltage output; squaring this yields 0.998 power ratio or 0.009 dB. We, therefore, know that 0.1% distortion at −10 dBm input means the maximum allowable compression is 0.009 dB. Extrapolating, using the rule-of-thumb relationship, states that 0.09 dB compression corresponds to an allowable RF of 0 dBm, and further extrapolating results in 0.9 dB compression at a maximum allowable RF input level of 10 dBm. So which mixer level is appropriate? A Level 17S, with +13 dBm RF Input level at the 1 dB compression point, see Fig. 2.

3. Intercept point.

This parameter is a figure of merit corresponding to the amount of intermodulation products generated relative to the desired IF output. An intercept point can be defined for a second order, third order, fifth order, product, etc. As a rule-of-thumb, two-tone third order intercept point is approximately 15 dB above the 1 dB compression point. So, if the intercept point figure is given, merely subtract 15 dB from this figure and pick a mixer which meets the 1 dB compression point spec, see Fig. 2.

4. Two-tone, third-order intermodulation (IM).

When a two-tone, third-order IM spec is given, the intercept point can be calculated. Remember that for each 10 dB increase in signal level, there is a 20 dB degradation in two-tone, third-order product. Once the intercept point is calculated, simply subtract 15 dB from the figure to find the 1 dB compression point and select the appropriate mixer.

5. 1dB Rf input compression level.

This key parameter is listed on mixer spec sheets so merely choose the lowest level mixer that will meet the requirement.

6. LO drive.

The LO dirve is critical since the function of the LO drive is to switch the mixer diodes fully on and off for lowest distortion. So, for optimum performance, select the mixer level to match the LO drive. Mini-Circuits conveniently identifies its mixer levels by the LO drive requirement; thus a Level 7 mixer refers to a LO drive level of +7 dBm. If there are constraints on the LO power available, select the lowest level mixer closest to the available LO power. For example, if +12 dBm LO drive is available, select a Level 10 mixer.

7. No particular spec to meet.

Choose a Level 7 mixer. Why? Because it is the most popular and it offers the widest choice of models at lowest cost.

Freq. range last deciding factor

Once the mixer level has been decided, you may find a wide variety of models to exercise your decision making. You may notice models within a series with overlapping frequency ranges. Why? So you can choose the optimum mixer for your requirement. Each model within a series has a different low-frequency limit. Select a mixer with the highest low frequency limit and whose mid-band range best covers your application.

Specs on the data sheets are given in three ranges. The lower frequency range, L, covers the lowest specified frequency to one decade higher; the upper frequency range, U, covers the highest frequency to one octave lower and mid-range, M, covers the frequency between L and U. Thus, a mixer specified from 0.5 to 500 MHz could offer a low-frequency range of 0.5 to 5 MHz, an upper frequency range of 250 to 500 MHz, and a mid-range of 5 MHz to 250 MHz.

What about "Specials"?

Although most Mini-Circuits mixers are 50 ohm devices, models are available in 75 ohms. Need connector types different than those listed for standard models? No problem. Some applications require matched mixer pairs that must be amplitude (conversion loss) and phase matched. Most Mini-Circuits mixers are tested to within 0.2 dB for the entire production run. Not tight enough? Let us know your exact requirement and we'll screen and test to meet it.

In summary, contact us about "specials" and we'll do our best to satisfy your needs without excessive cost or delivery date extensions. Sometimes, "special" means shipping a quantity of mixers within a very short time span; since Mini-Circuits is the largest manufacturer of mixers in thè world, this may hardly be considered "special" and you may be pleasantly surprised. Try us.

L = low range (f_L to 10 f_L) M = mid range (10f_L to f_U/2) U = upper range (f_U/2 to f_U)

NOTES:

■ Denotes 75 ohm models, 75 ohm BNC connectors are standard.
● Model PSC-3-1 manufactured under license protected by patent 3,428,920.
▲ On Model ZFSC-4-2-75-1, up to 15V and 15mA DC may be passed from input to all outputs.

1. For quality control procedures, see page 6.
2. For environmental specifications see page 7.
3. Absolute Maximum Ratings;
   Matched power rating ZA3PD, ZA4PD, ZB4PD(10W.)
   all other models (1W)
   Internal load dissipation
   all 3-way models (0.375W) all 4-way models (0.25W), see page 7.
3. For connector types and case mounting options, see case style outline drawing.
4. Prices and specifications subject to change without notice.
5. All 3-way power dividers with exception of ZA3PD are licensed under U.S. Patent 3,428,920; reissued as RE 27,299.

description

These new high efficiency phase detectors are the only units in the world offering a figure-of-merit greater than 125 for only $15.95.

The figure-of-merit M or efficiency of a phase detector can be defined as the ratio of maximum DC output voltage (in mV) divided by the RF power (in dBm). The maximum DC output from these units is 1000 mV with +7 dBm applied to the LO and RF ports, and DC offset is typically 400 micro-volts. Thus, its figure-of-merit M is 143, which indicates a highly efficient phase detector. For comparison, a double-balanced mixer used as a phase detector offers 350 mV DC output with the same LO and RF inputs for a figure-of-merit M of 50.

Both the RPD-1 and MPD-1 are packaged in a hermetically-sealed EMI-shielded metal case. The miniature RPD-1 measures 0.4 x 0.8 x 0.4 in. and the micromin MPD-1 is only 0.2 x 0.5 x 0.25 in.

So when your system requires a high output phase detector, specify the new RPD or MPD series.

NOTES:

1. Maximum RF input power, 50mW.
   peak IF current, 20mA.
2. Refer to table of contents for quality control procedures, environmental specifications, absolute maximum ratings, and hi-rel testing.
3. Prices and specifications subject to change without notice.

outline drawings pages 58-62

T, TH, case W 38, X 65
TMO, case A 11, †case B 13
FT, FTB, case H 16

For PC applications, select from the low-cost, plastic-case T series (small enough to be inserted into a standard 1/3 DIP socket), or the hermetically-sealed RFI shielded TMO metal-case series (requiring less PC area than a flatpack or TO-5 can), or the plastic-case T-H series designed to handle up to 100 mA in the primary winding without appreciable saturation or change in RF characteristics.

Transformer core saturation is influenced by (1) dc current through the winding, (2) RF input power, and (3) frequency of operation. These three variables interact to affect the point at which saturation occurs, see Figs. (1) and (2). These curves show the point where distortion occurs, by visual observation, and illustrate how saturation is influenced by dc current through the winding, RF input power level and frequency of operation: See that (1) if the dc current through the winding increases, the allowable RF input power decreases and the minimum frequency of operation will increase, (2) if RF input power increases, the maximum allowable dc current through the winding will decrease and the minimum frequency of operation will increase, (3) if the frequency of operation increases, then the RF input power can be increased and the dc current through the winding can also be increased.

Now comparing the T-H series to the conventional T-series in Figs. (1) and (2), note that saturation effects are negligible with the T16-1H; so for wide dynamic range applications, specify the T-H series.

Coaxial connector models are available from 10 KHz to 500 MHz and are offered with 50 ohm and 75 ohm impedances; 75 ohm connectors are used at 75 ohm ports. The FT1.5-1, with unbalanced input and output, is especially useful for 50 ohm to 75 ohm matching applications. The FTB series with unbalanced output and balanced input (connector ground insulated from the case) helps eliminate ground loop problems, especially when long cable runs are involved.

As shown in the data chart on the following page, models are available in five basic configurations.

These transformers may be operated as low as 12.5 ohms at the primary with essentially the same impedance matching ratio and only a slight change in frequency response.

For each RF transformer model, the minimum and maximum frequency is given for the insertion loss at the 3 dB, 2 dB and 1 dB points, as shown in Fig. (3) and listed in the data chart. For example, the T1-1 insertion loss is 1 dB from 2 to 50 MHz and 3 dB from 0.15 to 400 MHz.

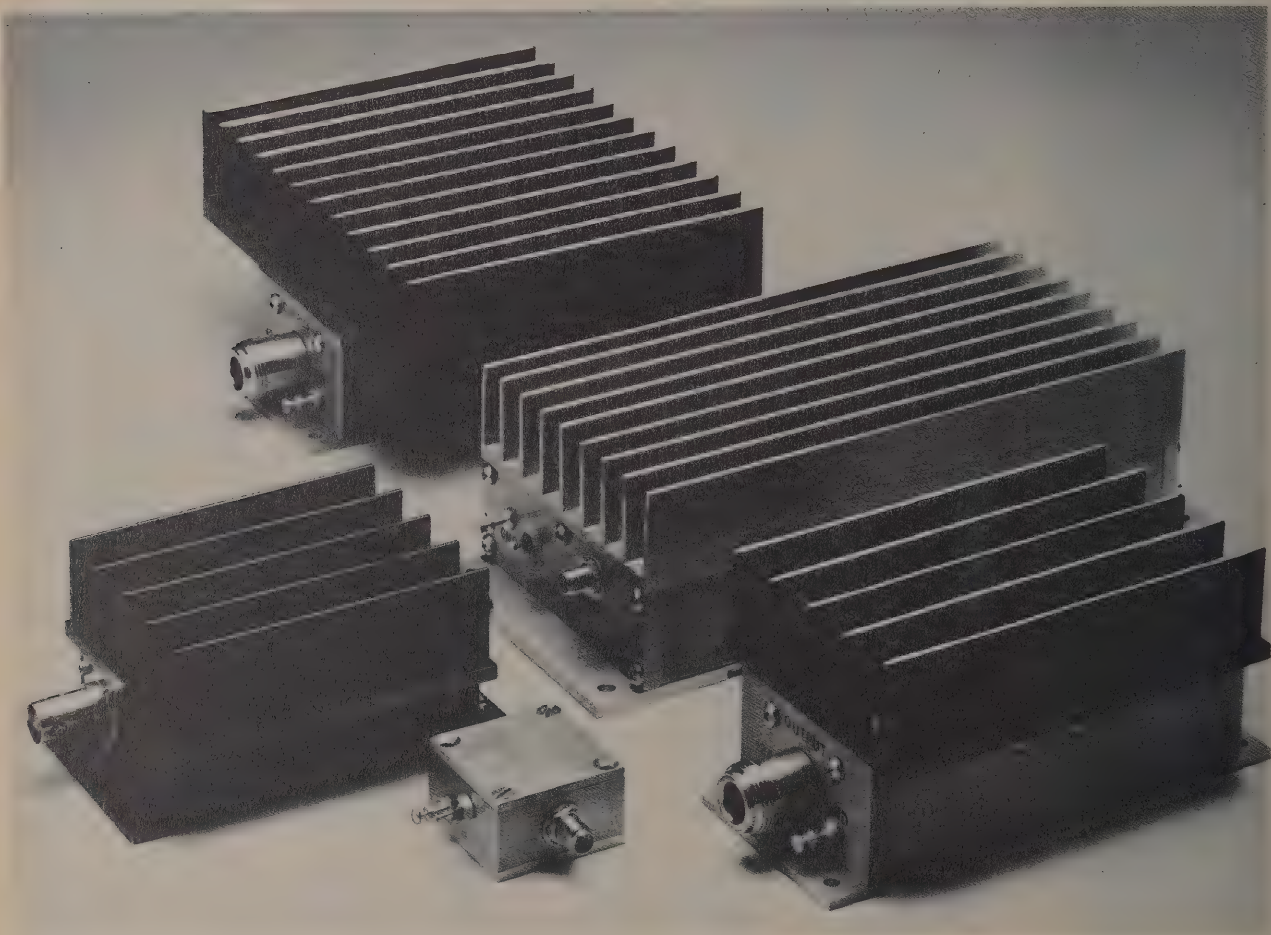
broadband linear

Power Amplifiers

up to 2 Watts (+33 dBm)

50 KHz to 4.2 GHz



Up to 1 watt linear output at 4.2 GHz, 2 watts at 800 MHz are now available at exceptionally low prices with Mini-Circuits' line of broadband amplifiers. Ultra-linear Class A design provides unconditional stability so any load impedance may be connected without concern for damage or oscilation. These amplifiers are ideally suited for TACAN, mobile radio, telemetry, anti-collision and satellite communications systems. Use these amplifiers to boost signal/sweep generator output to achieve broadband isolation, and to provide four test setups, using only one generator with a 4-way splitter...to name just a few applications.

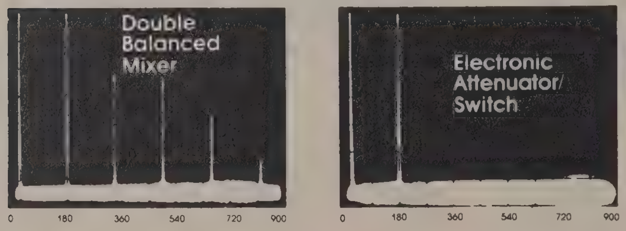
Double Balanced Mixer Vs. Electronic Attenuator



NOTES: (both pages)

1. Maximum RF input power, 1 watt. Maximum control current, 40 mA.
2. Refer to table of contents for quality control procedures, environmental specifications, absolute maximum ratings, and hi-rel testing.
3. For connector types and case mounting options, see case style outline drawings.
4. For PSW and ZMSW models
    a) VSWR 1.5 max. ("on" state)
    b) Switching speed 1μ sec. max.
    c) Maximum RF input +20 dBm
    d) Control voltage +5V (5mA max.) on condition
    0V off condition
5. Prices and specifications subject to change without notice.

*NOTES:

MATERIAL & FINISH

A1. Header material CRS; Pin material; #52 alloy. Finish: electro tin hot-oil flowed, Cover material; cupro-nickel.

A2. Case material CRS; Pin material; #52 alloy; Covers stainless steel. Finish; gold flash per MIL-G-45204.

A3. Case material plastic. Pin material; iron-nickel alloy. Finish; bright tin-plate per MIL-T-10727.

A4. Case material aluminum. Finish; iridite.

A5. Case material CRS. Finish; baked grey enamel over hot-tin dip.

A7. Case material aluminum. Finish; black enamel. Heat Sink; black anodize.

A8. Case material aluminum. Finish; iridite. Heat sink; black anodize.

A9. Case material brass. Finish; nickel plate.

MOUNTING

B1. Mounting bracket available on request. Add suffix B to part number.

MARKING

C1. For port markings 1, 2, and 3 see specification data sheet.

C2. Consecutive marking, n = no. of way power splitter.

CONNECTORS

D6. Connectors: Female SMA only. Male SMA available on request, consult factory.

D9. Connectors: BNC standard, TNC on request (add $10.00 to unit cost), Female SMA on request (add $25.00 to unit cost).

D10. Connectors: BNC standard, TNC on request (add $20.00 to unit cost), SMA on request (add $45.00 to unit cost).

D11. Connectors: BNC standard, TNC on request (add $35.00 to unit cost), SMA on request (add $65.00 to unit cost).

D12. Connectors: BNC standard, TNC on request (add $15.00 to unit cost), SMA on request (add $35.00 to unit cost).

D14. Connectors: Please specify: Type N or SMA

D15. Connectors: male BNC, female BNC standard. Other combinations with SMA available on request (add $2.00 to unit cost).

D16. Connectors: male SMA, Female SMA only.

D17. Connectors: male N, female N standard. Combinations with BNC, SMA, TNC available on request (add $3.00 to unit cost).

D18. Connectors: male TNC, Female TNC only.

D20. Connectors: please specify, unless otherwise noted. BNC is standard, TNC, SMA or Type N (add $10.00 to unit cost).

*NOTES:

MATERIAL & FINISH

A1. Header material CRS; Pin material; #52 alloy. Finish: electro tin hot-oil flowed, Cover material; cupro-nickel.

A4. Case material aluminum. Finish; iridite.

A5. Case material CRS. Finish; baked grey enamel over hot-tin dip.

A6. Case material aluminum. Finish; blue baked enamel over phosphoric etch per MIL-C-15328.

MOUNTING

B1. Mounting bracket available on request. Add suffix B to part number.

B2. Mounting bracket available on request. Add suffix B to part number. Add $1.50 to unit cost.

MARKING

C1. For port markings 1, 2, and 3 see specification data sheet.

CONNECTORS

D1. Connectors: SMA Standard. BNC on request (no charge). Male SMA on request (add $5.00 to unit cost).

D2. Connectors: please specify, unless otherwise noted; BNC is standard, TNC no charge, SMA and Type N add $5.00 per unit. (ZAPD only, Dash – 4 units not available with BNC).

D3. For Type N or TNC connectors this dimension, "C*", changes from 0.75 to 0.94 inches.

D4. Isolated BNC connectors are standard, FTB models only.

D5. Connectors: BNC standard, TNC on request (no charge).

D6. Connectors: Female SMA only. Male SMA available on request, consult factory.

D7. Connectors: BNC only.

D8. Connectors: BNC standard, TNC on request (add $10.00 to unit cost), Female SMA on request (add $15.00 to unit cost).

D9. Male BNC, Male N available: (add $2.00 to unit price. Specify ports for Male connectors).

Mini-Circuits
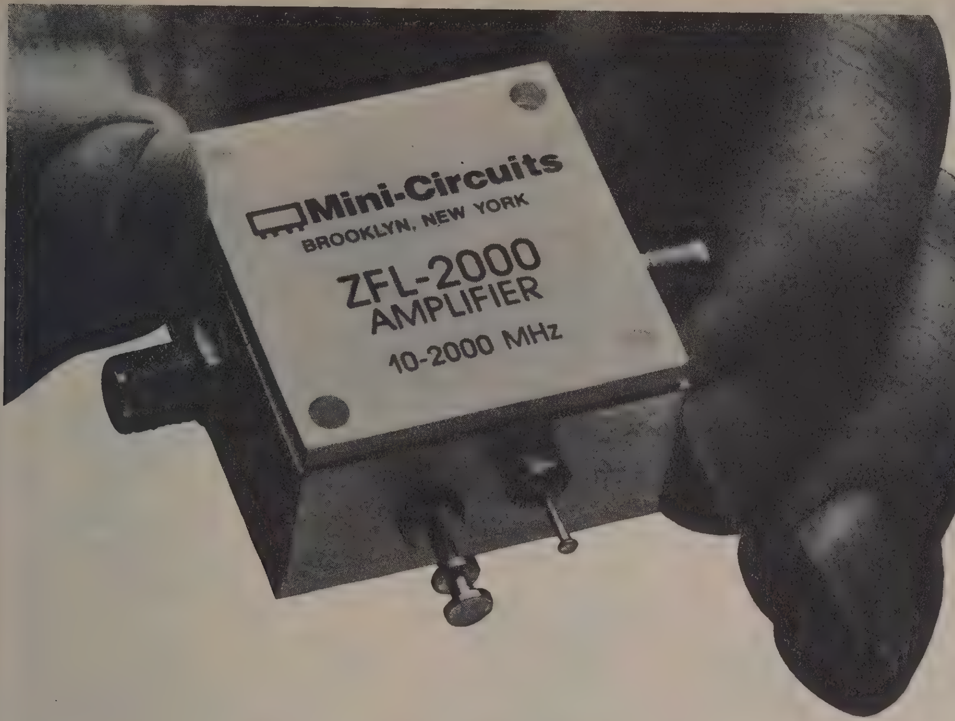
1 watt 0.7 to 4.2 GHz amplifiers...only $895



amplify or isolate? it does both.

22 dB gain and 40 dB isolation, 10-2000 MHz. . . only $179

Either way, the ZFL-2000 miniature wideband amplifier is an engineer's problem solver. Some examples of solutions offered by the ZFL-2000 are

- Boosting signal/sweep/synthesizer outputs to 50 mW.
- Achieving broadband isolation, especially when combining 2 signal generators for a two-tone intermodulation measurement.
- Increasing the dynamic range of spectrum analyzers.
- Driver for power amplifiers, such as Mini-Circuits' 1 and 2 watt ZHL series.
- Extending the frequency range of signal generators when using a frequency doubler, filter and then amplifying.
- Creating multiple output ports for one signal generator when amplifying and then adding a Mini-Circuits power splitter or divider.

These unconditionally stable wideband amplifiers are available with SMA connectors and are housed with an internal heat sink in a rugged 1.25 in. sq. by 0.75 in. high RFI shielded case.

Meets MIL-STD 202, these units operate from −55°C to +100°C.
One week delivery and a one-year guarantee, of course.

For complete specifications and performance curves refer to the Goldbook, EEM, EBG, or Mini-Circuits catalog

ZFL-2000 SPECIFICATIONS

WIDEBAND POWER DIVIDERS/COMBINERS, HYBRID TRANSFORMERS, & TERMINATIONS

North Hills

POWER DIVIDERS/COMBINERS

0.2 - 110 and 30 - 225 MHz
2, 4, and 8-way
50 and 75 ohms

Series 01 and 10 Power Dividers are designed for low power applications in the 0.2 to 110 and 30 to 225 MHz frequency ranges.

Hybrid Junction Techniques are employed to assure superior isolation and minimal insertion loss. VSWR is optimized at all ports.

50 and 75 ohm impedances are standard. Other impedances available on special order.

SPECIAL UNITS — 10 Hz to 1 GHz

In addition to our standard lines, North Hills custom designs to specific requirements. Examples of these include:

- Active unity – or high-gain power splitters, adders and combiners.
- High power dividers.
- Resistive dividers from dc to 500 MHz
- Power dividers for video applications with response down to 1 kHz.
- Non-standard impedances.

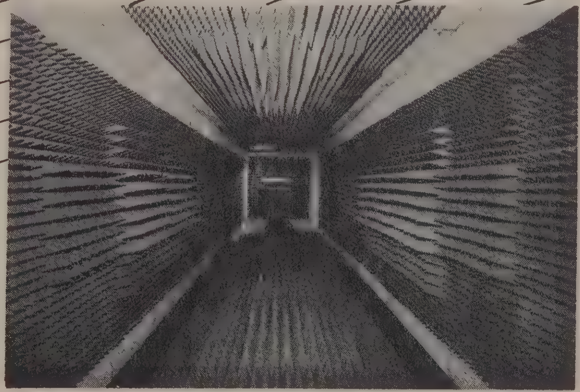
Test Facility



Premier Microwave Corporation has been serving the Microwave Industry for almost half a century with narrow- and broad-band waveguide, strip and coax components and sub-systems. We design, manufacture and test fixed, variable and dc-controlled products, both active and passive, with emphasis on a superlative ferrite engineering section.

Write for a complete catalog of standard and custom microwave components and sub-systems, or send your specifications for evaluation/price/delivery to:

PMC

PREMIER MICROWAVE CORP.
a subsidiary of Comtech, Inc.
33 New Broad St., Port Chester, NY 10573. (914) 939-8900

Designers and manufacturers of Rotary Joints, Ferrite Devices, Front Ends, Antennas and other microwave system components. Automated-computerized antenna test pattern facility available.

Qualified personnel are invited to send resume and salary requirement to Director of Personnel, Premier Microwave Corp., 33 New Broad Street, Port Chester, N.Y. 10573.

Since 1960, Telonic has been a leading name in precision electronic components. Telonic's approach is to offer an *exceptionally wide* choice of standard filter types that can be delivered promptly—and which meet your specification requirements. Electrical test design data accompanies each order on request—and is your guarantee of quality assurance.

In the early 1960's when Telonic needed a precision step attenuator for one of their newly designed sweep generators, they had to revert to the ultimate supplier—themselves—to get the performance and dependability the instrument engineer demanded. Today, the product line has expanded into a complete series of rotary step, toggle, fixed, programmable, and custom units.

■ Technical assistance ■ Custom designs ■ Competitive prices ■ Outstanding product quality—backed by full warranty ■ Prompt delivery of stock items.

Call toll free for specs, prices and delivery on standard or special orders.

µicropuck® Circulators & Isolators

The Micropuck™ family of circulators and isolators was designed to maximize the use of isolators and circulators in stripline and microstrip applications. They are easy-to-mount devices with magnetic shielding which prevents detuning or changes in performance when operating in magnetic fields or in close proximity to ferrous metals. The round design and tab lead configuration allow installation at a reduced cost, replacing milling operations with a simple drilled hole.

The Micropuck™ isolator is also available in a flange mount similar to the mounting used on some power transistors. This construction has input and output tabs located 180° from each other as opposed to the 120° separation of the round version. This provides an alternative choice for system designers who prefer the screw-down mounting and can allow the extra space it requires.

Specifications for these microminiature ferrite devices are as good as you'll find anywhere. Look at the data and call our ferrite sales group or local representative.

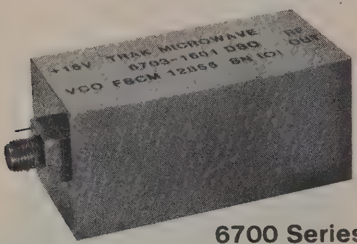
Power Supply:	-15 VDC @ 40 mA nom.
Frequency stability:	10ppm/°C, max. 5ppm/°C, typical
Temperature:	-54 to +95°C.

NOTE: Contact factory regarding improved stability requirements.

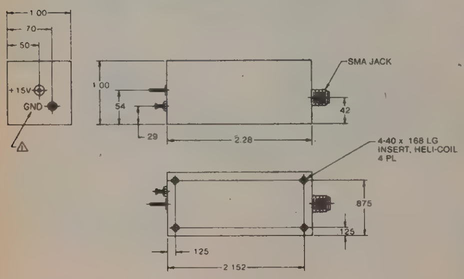
8 - 18 GHz GaAs FET Dielectrically Stabilized Oscillators (DSO's)

ENVIRONMENTAL CONDITIONS

Operating temperature range:	-54 to +115°C.
Storage temperature:	-54 to +125°C.
Shock:	100g, 11ms
Vibration:	20g, 20-2000cps



6700 Series



ELECTRICAL PARAMETERS

Frequency:	Factory set between 8 and 18 GHz
Frequency set accuracy:	±1 MHz
Power output:	+10 dBm minimum
In-band spurious:	None
Stability:	
Frequency vs temperature:	5ppm/°C max., 2.5 ppm/°C typical
Frequency pulling:	1 MHz peak to peak, maximum, into 3:1 load VSWR
Frequency pushing:	2 KHz/volt, typical
Power vs temperature:	±1 dB
Power supply:	+15 VDC @ 80 mA, nominal

MECHANICAL PARAMETERS

Size:	2.28 x 1.0 x 1.0 inches (58 x 25.4 x 25.4 mm) nominal, excluding projections
Weight:	100 grams, nominal
RF connector:	SMA female
DC connections:	Solder terminals

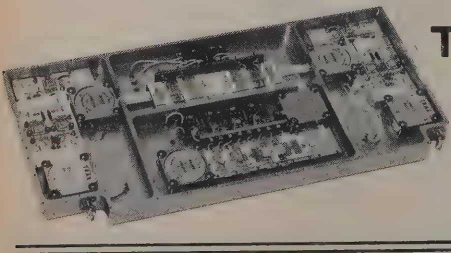
Options: The following components can be added to tailor the oscillator to meet specific system requirements and to obtain the optimum cost-performance tradeoff.

- PIN switch for dual frequency mode.
- Amplifier stages for increased output power.
- RF coupler for RF power monitoring or other functions.
- Power dividers for driving multiple mixers.
- PIN attenuator for external amplitude modulation.
- Varactors for external frequency modulation.
- Heater for increased frequency stability.

In addition to adding other functions, TRAK can provide special models to provide minimal FM under 50g operating vibration. Models with mechanical tuning capability are also available.

Specifications subject to change without notice.

Tacan Band Dual Channel Power Amplifier



Frequency Range:	960 - 1215 MHz	Duty Factor:	20%
Power Output:	165 watts peak per channel	Bandwidth:	255 MHz
Gain:	42 dB		

Dept. E-4 4726 Eisenhower Boulevard • Tampa, Florida 33614 • (813) 884-1411 • TLX: 52-827 • TWX: 810-876-9140

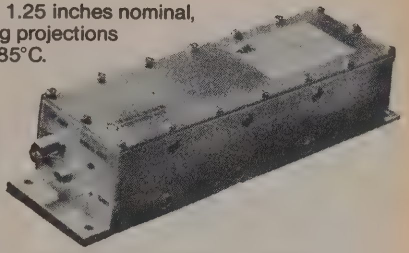
TRAK MICROWAVE

Oscillators, Comb Generators, IF Amplifiers & Power Amplifiers

Ovenized Ku Band Crystal Controlled Oscillators

Frequency:	12, 13, or 14 GHz
Power Output:	+10 dBm minimum
Frequency Stability:	±5ppm (-20°C. to +71°C.)*
Frequency Set Accuracy:	±2ppm (at +25°C.)
Harmonics and Spurs:	>40 dBc
Load VSWR:	1.5:1 maximum
Power Supply:	+15V @ 430 mA steady state (800 mA max. at turn-on)
Warm-up Time to meet 5ppm frequency stability:	120 sec. max.
Size:	5 x 1.5 x 1.25 inches nominal, excluding projections
Temperature Range:	-55 to +85°C.

*Includes heater stabilized.



2.5 - 18 GHz Miniature Crystal Controlled Oscillators

ELECTRICAL PARAMETERS (general)
Frequency set accuracy at room temperature: ±0.001%
Freqeuncy stability: ±0.003%
Aging rate: ±0.005% per year
Power variation with temperature: ±2 dB
Power supply: +15 VDC (other voltages optional)
Load VSWR: 1.5:1 maximum
Temperature Range: -55 to +85°C. (to +125°C with degradation)
Contact factor for other frequencies and/or power levels.

MODEL #	FREQUENCY (GHz)	POWER OUTPUT AT +25°C. (dBm min.)	OUTPUT HARMONICS AND SPURIOUS (dBc)	CURRENT (mA nom.)
5044-1311	2.5 - 4.0	+10	>40	100
5044-1611	4.0 - 8.0	+10	>40	110

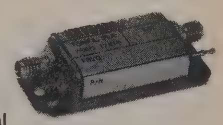
5045-1240	12.0 - 18.0	+10	>40	150

Wide Dynamic Range Low Noise IF Amplifer
Model 8400-1080



Center Frequency:	Customer specified 20 to 150 MHz
3 dB Bandwidth:	10 MHz, nominal
Bandpass Ripple:	1 dB, typical
Skirt Selectivity:	12 dB/octave, typical
Gain:	70 ± 3 dB
Noise Figure:	3 dB max.
Input Impedance:	50 ohms nominal
1 dB Compression Point:	0 dBm min.
3rd Order Intercept Point:	+10 dBm nominal
Input Dynamic Range (with AGC):	80 dB min.
AGC Range:	60 dB min.
AGC Voltage:	0 to + 5 volts
Size:	1.28 x .71 x 0.5 inches, nominal excluding projections
Temperature Range:	0 to + 50°C (see note)

NOTE: Temperature compensation circuits are optionally available for higher stability and/or wider temperature range.

Custom Designed Switched Multiple Output Oscillator

This custom designed unit provides several electrically selectable output frequencies. Output signals can be in various bands and with various power levels. Thin-film hybrid techniques minimize size. Contact TRAK with your needs.

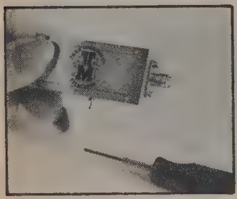
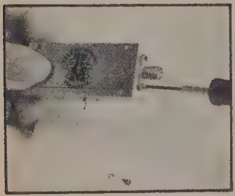
TRAK® MICROWAVE

GaAs FET Amplifiers (Drop-In Wide Band Temperature Compensated Type)

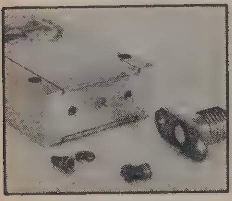


Amplifier is shipped with connector in place to simplify testing.



After test, screws are removed.

Connector is removed. Unit remains hermetically sealed. TRAK PAK™ impedance remains 50 ohms.



Amplifier is ready to drop into microstrip circuit.

TRAK. MICROWAVE WESTERN DIVISION

YIG Components (Military Grade)

TRAK can provide you a wide variety of Military Grade YIG tuned filters, oscillators and harmonic generators, covering frequencies 0.5 - 40 GHz. The following is a sample of our specs for MIL-grade units; however, tighter tolerances for commercial applications are also available. All designs are available with or without integral tuning devices.

WAVETEK
FILTER

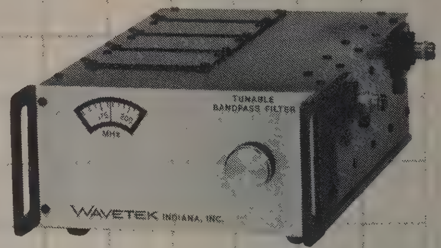
Filters in TO-5 size packages are only 0.36 inches in diameter and weigh less than 0.046 oz. Standard models cover 10 to 2000 MHz frequency range. Other frequencies are available on special order. Bandpass, lowpass, highpass and bandstop filters are available. Models are available that meet MIL-E-5400 and MIL-STD-202. A glass-to-glass hermetic seal is standard on "T" packages.

TUBULAR AND LC FILTERS

- 2 MHz to 10 GHz
- Computer Designed (CAD)
- Nine Series
- Meet Military Specifications

TUNABLE BANDPASS FILTERS

- 30 to 2000 MHz
- Octave Frequency Bands
- 2.2 Typical Form Factor
- ± 1% Accuracy and Resetability
- Gear Drive



MODEL	FREQUENCY RANGE
5201	31 to 62 MHz
5202	62 to 125 MHz
5203	125 to 250 MHz
5204	250 to 500 MHz
5205	500 to 1000 MHz
5206	1 to 2 GHz

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

Weinschel RF components . . .

DC-40 GHz

Weinschel Engineering offers the industry's most comprehensive line of high quality microwave components. Covering the frequency spectrum from DC to 40 GHz, these components include fixed, continuously variable, and step attenuators as well as precision terminations, connectors, adapters and power dividers. Consistent performance and virtually flat attenuation versus frequency characteristics are well-known qualitites of Weinschel components. Power ratings from 1 watt to 250 watts are available.

Conservatively rated, Weinschel's high power attenuators handle at least 24% more power than specified. Due to innovative engineering and state-of-the-art manufacturing techniques, our high-power line is continually being improved and expanded. Not only do we offer a 250 watt attenuator but high power attenuators with broadband capabilities are also now available. For example, Weinschel's model 48, rated for 100 watts average, 1 KW peak, operates from DC to 18 GHz. Proprietary film processes produce resistive elements with features such as low temperature coefficients, low aging rates and immunity to overload. By eliminating the need for heat conducting liquids, size can be reduced while reliability is improved.

For more information about our component line contact your nearest Weinschel representative or call us toll free.

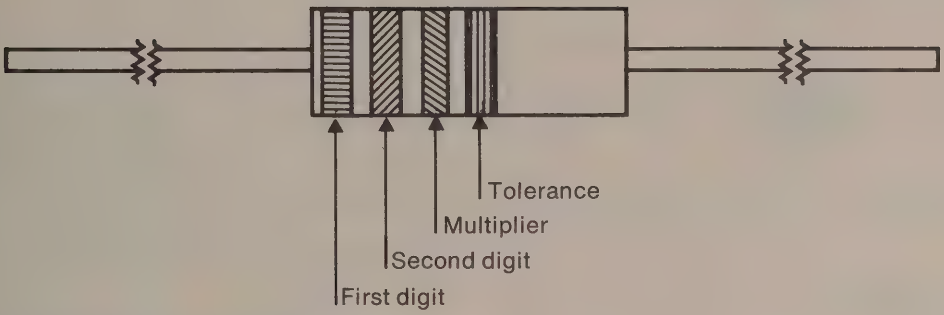
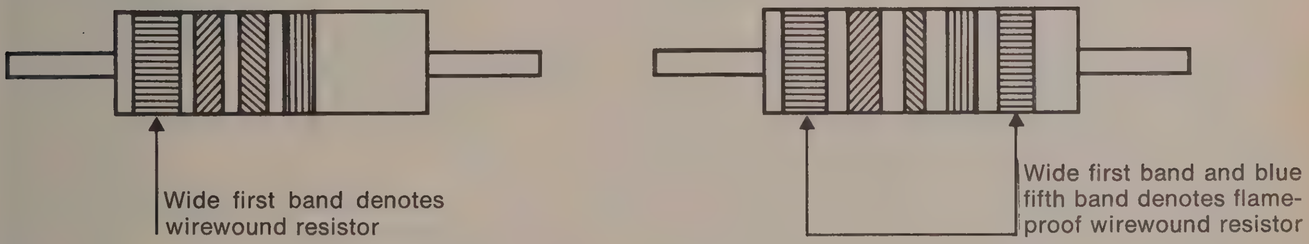
MINIGLOSSARY
RESISTOR COLOR CODES

EIA/MIL Resistor Color Codes



Tolerance
Multiplier
Second digit
First digit

Color code for general-purpose industrial resistors

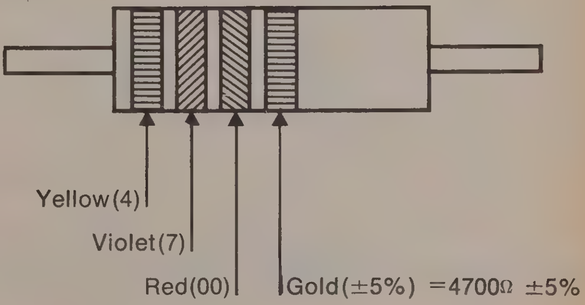


Wide first band denotes wirewound resistor
Wide first band and blue fifth band denotes flame-proof wirewound resistor

Color code for general-purpose wirewound resistors

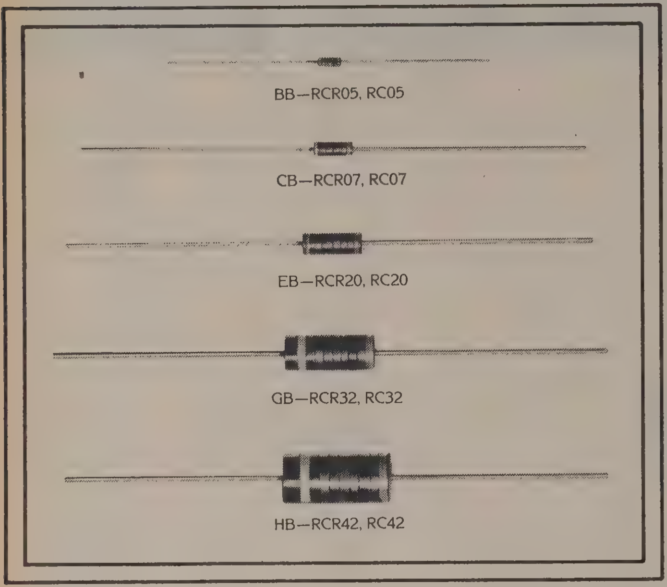
Color	Significant digit	Multiplier	Tolerance
Black	0	1	—
Brown	1	10	± 1%
Red	2	100	± 2%
Orange	3	1000	± 3%
Yellow	4	10,000	± 4%
Green	5	100,000	—
Blue	6	1,000,000	—
Violet	7	10,000,000	—
Gray	8	—	—
White	9	—	—
Gold	—	0.1	± 5%
Silver	—	0.01	±10%
No color	—	—	±20%

Example:



Yellow(4)
Violet(7)
Red(00)
Gold(±5%) =4700Ω ±5%

Types BB, CB, EB, GB, HB, GM, HM Hot-Molded Fixed Resistors



Allen-Bradley hot-molded composition resistors are high quality units intended for general purpose use in the electronics industry.

Allen-Bradley Style RCR resistors not only meet all requirements of MIL-R-39008 but also exceed the S level (best level) of Established Reliability of 0.001% failure rate per 1000 hours. And only Allen-Bradley resistors are available in S level reliability in all five wattage sizes over the entire resistance range. The S reliability level is indicated by a yellow 5th color band on the resistor body.

Metal-clad hot-molded resistors (Types GM and HM) are fitted with metal clamps which surround the major portion of the resistor. The metal clamps provide rigid mounting and efficient heat transfer from the resistors to the metal chassis or panels on which they are mounted.

For more information request Publication EC5021-2.1.

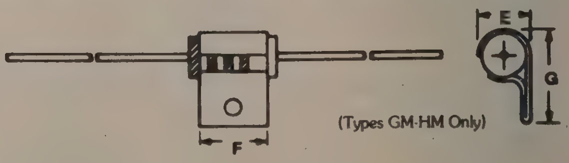
(Types BB-CB-EB-GB-HB)



(Types GM-HM Only)

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

Types RN,RNK

Metal Film Fixed Resistors

Type RN

Type RNK

1/4 Watt at 70° C
10 Ohms to 1 Megohm
±1% Tolerance, ±5% Tolerance
±100 PPM/° C, ±200 PPM/° C

FEATURES

- Highly Stable Metal Film
- Tight TCR
- Laser Trimmed Element
- High Quality Performance
- Standard Tape Reel Packaging
- Automatically Insertable

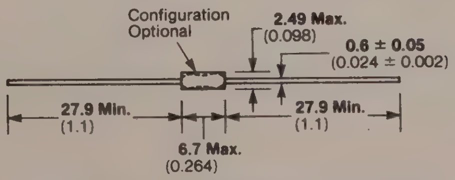
Allen-Bradley metal film resistors are high quality units intended for general purpose use in the electronics industry.

Nichrome resistance element provides stable performance under load, in various environments, and on the shelf. Type RN performance characteristics are better than MIL-R-22684 (RL07) requirements. Type RNK performance characteristics are better than MIL-R-10509 (RN55D) requirements.

For more information request Publication EC5030-2.1 (Type RN) or Publication EC5032-2.1 (Type RNK).

SPECIFICATIONS

Type	Power at 70°C	Resistance Range	Tolerance	RCWV	Maximum Ambient Temperature
RN	¼ Watt	10 Ohms to 1.0 Megohm	± 5, 2%	250V or Less	+ 155°C
RNK	¼ Watt	10 Ohms to 1.0 Megohm	± 1%	250V or Less	+ 155°C

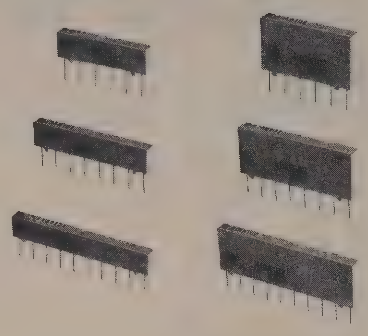


Note: Dimensions in Millimeters (inches).

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

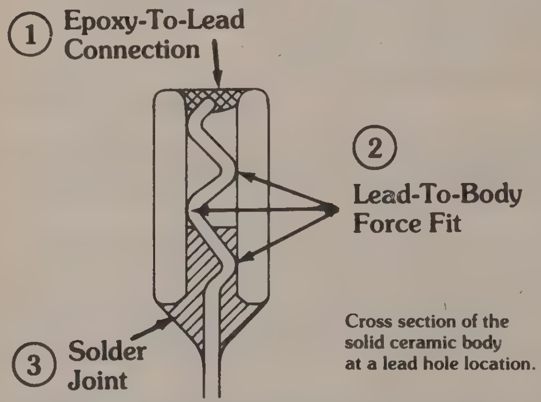
Series 100 400 Cermet Resistor Networks



I-SIP
Single In-Line Package

Tough new package

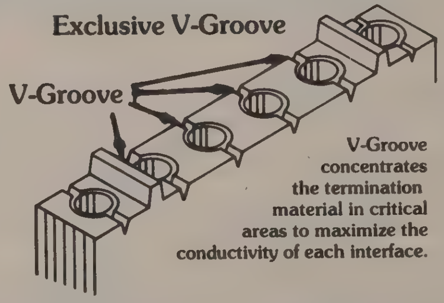
Triple-Strength Leads



①
Epoxy-To-Lead Connection
②
Lead-To-Body Force Fit
③
Solder Joint

Cross section of the solid ceramic body at a lead hole location.

Exclusive V-Groove



V-Groove concentrates the termination material in critical areas to maximize the conductivity of each interface.

FEATURES

- Solid Ceramic Body, with V-Groove
- Triple-Strength Leads
- 0.100 Inch (2,54mm) Lead Spacing
- Two Package Heights:
  0.190 Inch (4,83mm), 0.350 Inch (8,89mm)
- 6, 8 and 10 Pins
- Automatically Insertable
- Permanent Laser Marking
- Part Markings — Side and Top

For more information request Publication EC5420-2.1

DIP
Dual In-Line Package

Series F08, F14, F16 Thin Film Resistor Networks

FEATURES

- 99.5% Alumina Substrate
- Molded Epoxy DIP Package
- 0.100 Inch (2,54mm) Lead Spacing
- Low Profile
- 8, 14 and 16 Pin Construction
- Automatically Insertable
- Meets Specifications of Characteristic V of MIL-R-83401

For more information request Publication EC5512-2.1.

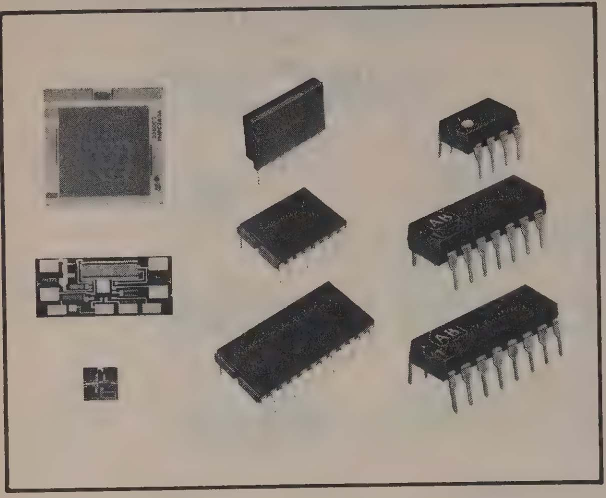
Series FC, FG

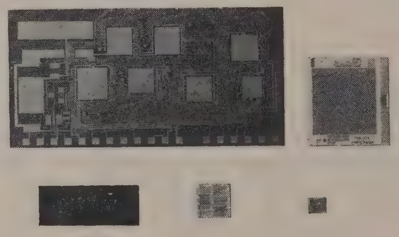
Precision Thin Film Custom Resistor Networks



Applications

These precision networks are ideally suited for use on any electronic equipment requiring close tolerances and/or low temperature coefficient resistors. Some of these applications are listed below.

- Ladder networks
- Digital multimeters
- Current summing applications
- Precision attenuators
- A/D and D/A converters
- Communication equipment
- Precision voltage dividers
- Telemetry equipment
- Coding and decoding circuitry
- Measurement bridges
- Paging systems



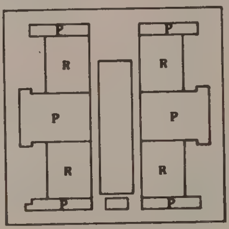
Chip Networks and
Hybrid Network Substrates

Hybrid network substrates — Allen-Bradley hybrid network substrates contain resistors, bonding pads and interconnections used in producing hybrid networks. Allen-Bradley does not manufacture complete hybrid circuits, but does manufacture the basic hybrid network substrates.

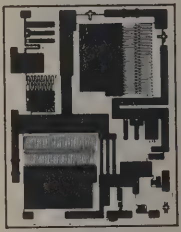
FEATURES

- 1K Ohms to 10 Megohms
- ± 0.015% Tolerance
- ± 0.015% Ratio
- ± 25 ppm/°C TCR
- ± 5 ppm/°C TCR Tracking
- SIP Package (ceramic)
- DIP Packages (molded and ceramic)
- Chip Resistor Networks (alumina or glass)
- Hybrid Network Substrates (alumina or glass)

For more information request Publication EC5510-2.1.



Chip Network



Hybrid Network Substrate

Termination and bonding pad material — Gold, with a minimum thickness of 5000A, is used for all termination pads, bonding pads and interconnections. This material is compatible with ultrasonic and thermocompression bonding methods for attaching gold or aluminum wire, integrated circuit dice, LID's or beam leaded IC's. Chip capacitors can be attached by reflow solder methods.

Substrate material — Glass: Corning 7059 glass (Barium Alumino Silicate - electrically inert [Alkali-free]) .032 ±.005 inch (0,81 ±0,13mm) thick. Ceramic: 99.5% Alumina, .010 ± .001 inch (2,54 ±0,3mm) thick.

User trimmable option — Chip and hybrid network resistors can be trimmed to tolerance by Allen-Bradley or, if needed, resistors can be

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

designed for active trimming by the user during final hybrid assembly operations to meet predetermined functional requirements. The amount of adjustment available is dependent on the initial resistance value, resolution, final value and available substrate area. The active trimming results in a positive resistance change only and can be done by mechanical methods or a laser. These networks are referred to as user trimmable resistor networks.

Standard substrate sizes (in inches) —
.150 x .150 .350 x .150 .200 x .200 .600 x .200
.250 x .150 .450 x .150 .400 x .200 .250 x .250

Bonding pad sizes — 5 mils x 5 mils minimum.

Resistance range — 1K ohms to 10 megohms.

Tolerances — Absolute: as low as ± 0.015% at + 25°C. Ratio: as low as ± 0.015% at + 25°C.

TCR — ± 25 ppm/°C
TCRT — ± 5 ppm/°C

Temperature ranges of operation — –55°C to +125°C or 0°C to +70°C. Other ranges available.

Power rating — Up to 50mw per resistor.

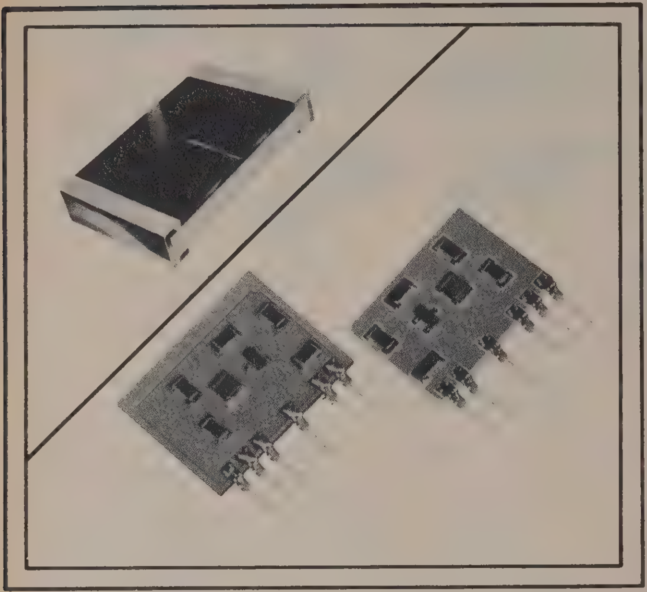
ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

Type BC Chip Resistor

1/8 Watt at 70° C
±5%, 200 PPM/° C
±1%, 100 PPM/° C
Zero Ohm Jumper



FEATURES

- Thick Film Resistance Element
- High Purity Alumina Substrate
- Glass Passivated
- Tight TCR
- Standard Size, 1.6 x 3.2 x 0.6 mm
- Wrap-around Termination
- Inner Electrode Protection
- Wave or Reflow Solderable
- Surface Attachable

For more information request Publication EC5110-2.1.

Nominal resistance range -
5% - 10 ohms to 2.2 megohms, E24 series
1% - 49.9 ohms to 2.2 megohms, E96 series.

HIGH PERFORMANCE FILM RESISTORS

High Performance Film Resistors

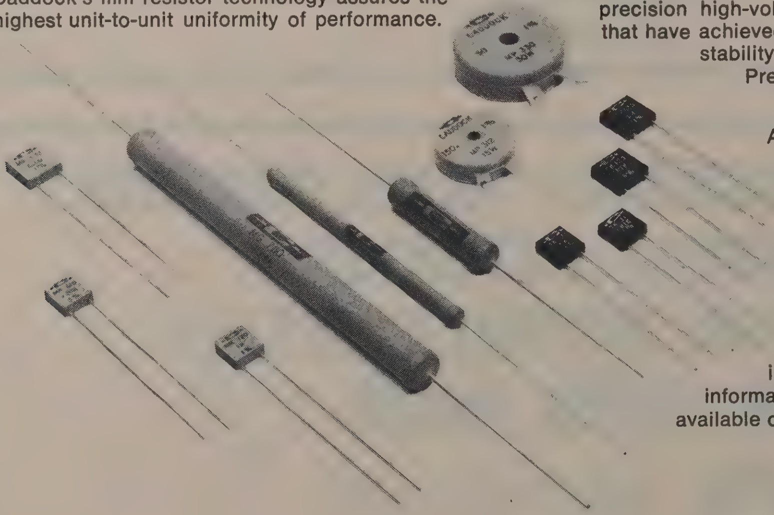
This 20th Edition of the Caddock Electronics General Catalog describes over 150 in-production models of precision discrete resistors and resistors networks that utilize Caddock's high-stability, extended-life Micronox® and Tetrinox™ resistance films. With 20 years of experience and an exceptional record of in-circuit performance and reliabilility, Caddock Electronics continues to lead the industry in the development, production and on-time delivery of high performance film resistors.

Caddock's Advanced Resistor Technology Provides Many Exceptional Performance Advantages:

Caddock's advanced resistor technology began in 1962 with the introduction of Micronox® harsh-environment high-power and high-voltage resistors. The Caddock technology was further extended in 1975 with the development of the Tetrinox™ resistance system that made possible the introduction of low TC, ultra-stable resistors and resistor networks.

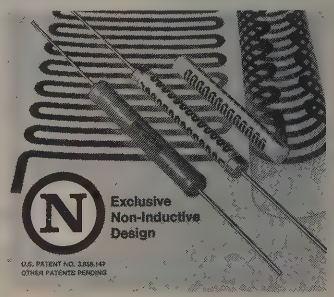
These technological advances have provided the electronics industry with a selection of precision resistor types that achieve many high-performance advantages:

- **Precision** — Tolerances as close as 0.01%.
- **Long-Term Stability** — Better than 0.005% per 1000 hours of operation under full load operating conditions.
- **Higher Power Ratings** — Up to five times higher than other resistor technologies.
- **High Operating Temperatures** — Up to +275°C.
- **Ultra-Low Temperature Coefficients** — Standard to less than 10 PPM/°C and custom values as low as 2 PPM/°C.
- **Unit-to-Unit Uniformity** — The inherent consistency of Caddock's film resistor technology assures the highest unit-to-unit uniformity of performance.



Caddock's Exclusive Non-Inductive Performance Is Available in Both High-Power and High-Voltage Micronox® Film Resistors.

For wide-band, high frequency applications, the advantages of Caddock's Exclusive Non-Inductive Design are available in most models of Micronox® resistors. This special serpentine pattern provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.



The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

The High-Performance Capabilities of Caddock Film Resistors Can Provide Improved Accuracy and Stability to Precision Circuitry:

Because of the special advantages of Caddock's resistance film technology, Caddock High Performance Film Resistors are often specified in the precision circuits that ultimately establish the overall accuracy and stability of the equipment.

Examples of such applications include many types of precision high-voltage supplies and voltage references that have achieved improved accuracy and extended-life stability through the use of Caddock Type MG Precision High-Voltage Resistors and Type T912 Precision Resistor Networks.

Additional examples of the application of this advanced resistor technology include the industry-wide use of Caddock Type 1776 and Type 1787 Precision Decade Divider Resistors in the signal input circuits of laboratory and bench-type digital voltage and current measuring instruments.

An introduction and index to these Caddock resistor technologies is provided on the next page. Additional information and technical assistance is also available directly from our technical staff.

We welcome your call.

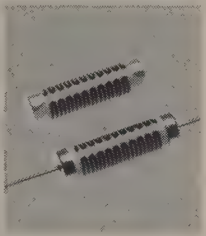
High Performance Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Micronox® Resistance Films



For harsh environmental conditions, Caddock Micronox® resistors are truly unsurpassed. Produced by firing complex-oxide Micronox® resistance films onto ceramic core materials at temperatures above +1400°F, these precision resistors can withstand extremes of temperature, thermal shock, overvoltage and input power.

The result is a family of high voltage, high power precision resistors with an exceptional combination of performance advantages:

- **High Power Ratings** — to 30 watts.
- **High Voltage Ratings** — to 30,000 volts.
- **High Stability** — as close as 0.01% per 1000 hours in 50,000 hour extended life.
- **High Operating Temperatures** — up to +275°C.
- **A Wide Range of Resistance Values In Many Sizes** — from 30 ohms to 2000 Megohms.

These performance advantages make Caddock Micronox® film resistors ideal for use in many types of electronic circuitry, including —

- **Voltage Reference Circuits**
- **High Power Density Packaging**
- **Precision Feedback Circuits**
- **Matched TC Resistor Pairs**

Type MG Precision High-Voltage Resistors
Highest stability at continuous operation to 30,000 volts in single-resistor values as high as 2000 Megohms.

Pages **1A**•1810 and **1A**•1811

Type MS and MR Power Film Resistors
Power ratings to 15 watts at 6000 volts in a single axial-lead resistor - plus, Non-Inductive Performance is available.

Pages **1A**•1812 and **1A**•1813

Type ML and MM Precision Film Resistors
Molded case encapsulation to meet high temperature industrial and aerospace requirements.

Page **1A**•1814

Type MP Chassis Mounted Power Film Resistors
High power density in both 15 and 30 watt ratings with center-screw chassis mounting.

Page **1A**•1815

Type MK Low Cost Precision Film Resistors

MK 132
10MEG
0.1%

.75 watt rating at +125° C. Resistance range from 30 ohms to 100 Megohms.

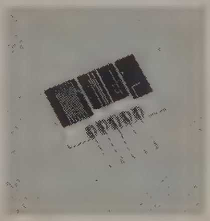
Pages **1A**•1816 and **1A**•1817

Type 1787 Current Shunt Resistor Networks

2-, 3- and 4-decade input networks for accurate current sensing in multi-range instrumentation.

Pages **1A**•1818 and **1A**•1819

Tetrinox™ Resistance Films



In high-accuracy instrumentation where outstanding circuit performance is required through variations of temperature and through long-term operation, Caddock Tetrinox™ resistance films are the answer.

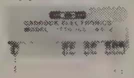
Constructed with advanced technology complex-oxide resistance films that are fired onto ceramic substrates, Caddock Tetrinox™ film resistors provide a unique combination of performance characteristics:

- **Ultra-Low Absolute and Ratio TC** — standard to less than 5 PPM/°C.
- **Ultra-Precision** — tolerances as tight as 0.01%.
- **High Resistance Range** — values to 10 Megohms in a miniature package.
- **Ultra-Stable in Loadlife** — ratio stability to within ±0.01% per 2000 hours.

This special combination of advantages make Caddock Tetrinox™ film resistors the optimum choice in many high stability applications, including —

- **Input Voltage Dividers in Precision Laboratory Instrumentation**
- **Precision Bridge Circuits**
- **Precision Voltage Reference Circuits.**
- **Ultra-Stable Voltage Dividers.**
- **Ultra-Low Power Precision Circuitry.**
- **Decade Resistance Networks.**

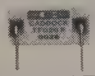
Type 1776 Precision Decade Resistor Voltage Dividers



33 models of decade voltage dividers for accurate voltage-division in multi-range digital instrumentation.

Pages **1A**•1820 and **1A**•1821

Type TF Low TC Ultra-Precision Film Resistors



The cost-effective replacement for precision high-value wire-wound resistors.

Page **1A**•1822

Type T912 and T914 Precision Resistor Networks

Resistor pairs and quads with ultra-precision ratio characteristics for analog circuits.

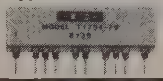
Page **1A**•1823

Type TK Temp-Stable Precision Film Resistors.

Temperature coefficients to less than 5 PPM/° C in single resistor values as high as 10 Megohms.

Pages **1A**•1824 and **1A**•1825

Type 1794 Custom Precision SIP Resistor Networks



Resistor networks with custom package size and custom performance.

Page **1A**•1826

If you should need additional information on any type of Caddock resistor, please call or write to our engineering and manufacturing offices in Riverside, California.

CADDOCK

HIGH PERFORMANCE FILM RESISTORS

Type MG Precision High-Voltage Resistors

Highest Long-Term Stability Combined with Precision Tolerances and TC of 80 PPM/°C.

Caddock's Micronox® resistance films are the source of the Type MG Precision High Voltage Resistors' outstanding combination of performance features:

- Single-resistor values as high as 2000 Megohms.
- Maximum continuous operating voltages as high as 30,000 volts.
- Overvoltage capabilities of 150% of the standard working voltages for all models and values.
- Resistance Tolerances from ± 1.0% to ± 0.1%.
- Standard temperature coefficient of 80 PPM/°C in combination with resistance tolerances as tight as ±0.1%.

– plus

- Typical extended life stability of 0.02% per 1000 hours as demonstrated by reliability testing.

This exceptional performance has been proven through many years of use in equipment that demands the highest reliability and stability, including TWT amplifiers, X-ray systems, geophysical instruments and medical electronics.

Special High-Voltage Pulse Performance

All power ratings and maximum working voltage ratings are for continuous duty. These ratings are based on pre-stress voltage levels applied during the manufacturing process to provide for stable resistor performance even under momentary overload conditions.

Maximum working voltages up to 60% higher than the values listed in the table can be achieved through special factory conditioning, provided the power ratings are not exceeded. To specify maximum working voltages above the values listed in the table, add a "–15" to the model number (Example: MG750-15) and identify the overvoltage value with the initial order. (Note that the standard overload and overvoltage ratings do not apply to the "-15" resistors.)

Non-Inductive Performance

Caddock's patented Exclusive Non-Inductive Design uses a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor. This efficient non-inductive construction is accomplished without derating of any performance advantages.

Most models are available with Caddock's Patented Non-Inductive Design. To specify this performance, add an "N" to the standard model number. (Example: MG750N)

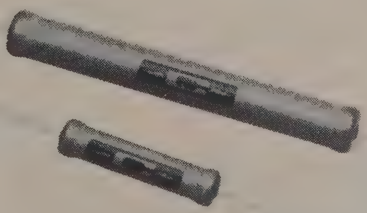
Matched Type MG Resistor Sets with Tight Ratio Tolerances and Ratio TC Tracking.

The temperature coefficients of Caddock Micronox® resistance films can be controlled to provide matched sets of Type MG resistors with tight ratio TC from -55° C to +105° C.

For high voltage divider applications, ±2% ratio tolerance and 25 PPM/° C ratio tracking is available.

For low voltage, high resistance applications – such as electrometer circuits or high-gain amplifiers – ±0.1% ratio tolerance and 10 PPM/° C ratio tracking is available.



CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MR & MS Power Film Resistors

Power Film Resistor Family with Wide Resistance Range and +275° C Maximum Temperature.

With power ratings to 15 watts and voltage ratings as high as 6000 volts in an axial-lead resistor with values to 30 Megohms, the Type MS Power Film Resistors deliver the performance capabilities that can simplify circuit design and reduce equipment cost and complexity.

Type MS Power Film Resistors provide all these features in a single resistor:

- Full power and voltage ratings, without derating —
  - for non-inductive performance.
  - for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability. Tests demonstrate typical stability of 0.05% per 1000 hours over extended life.

Micronox® Resistance Films

Type MS performance begins with Micronox® resistance films, the basic element in every Caddock resistor. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for 20 years in Caddock's precision power resistor products.

Micronox® resistance films are fired directly onto a ceramic core, in air, at 1400°F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This unique approach to precision power resistors opens new design possibilities by providing wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.

N
Exclusive
Non-Inductive
Design
U.S. PATENT NO. 3,858,147
OTHER PATENTS PENDING

There's no derating of performance when you specify Caddock's Exclusive Non-Inductive Design.

When non-inductive performance is specified, we produce these power film resistors with a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

Non-inductive construction is available in most models. Specify by adding "N" suffix to Model Number. (Example: MS 310N)

Carefully Controlled Manufacturing and Test Procedures Assure Compliance with Strict Quality Control Requirements

Manufacturing Control

In addition to these procedures, all Type MS Resistors are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control

From the certification and testing of all materials to the supervision of manufacturing processes, all Caddock Type MS and MR Power Film Resistors are produced under procedures that have been approved for conformance to the requirements of NASA NHB5300.4(1C) and MIL-I-45208 in many recent surveys.

Reliability Verification

Type MS Resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG and MK represent an identical combination of materials—aluminum oxide substrate, Micronox® resistance film and silicone insulating coating.

Type ML & MM Precision Film Resistors

High-Temperature Resistors for Geophysical, Aerospace and Industrial Requirements.

Type MM and ML resistors have a proven performance history in industrial, computer, military and space applications. With power ratings up to 3 watts and resistance values to 15 megohms, these outstanding resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1000 hours.

The Type MM Precision Film Resistors provide a maximum operating temperature range of +275° C and both the Type MM and the Type ML have temperature coefficients of only 50 PPM/° C over the range from −15° C to +105° C.

Exclusive
Non-Inductive
Design
U.S. PATENT NO. 3,858,147
OTHER PATENTS PENDING

Construction includes Micronox® resistance films fired onto a high strength solid ceramic core. End cap construction and a molded case completes the resistor assembly and provides increased resistance to abrasion and solvents.

Caddock's Exclusive Non-Inductive Performance can also be specified for most of these resistors by adding the "N" suffix to the model number. (Example: MM 236N)

†Temperature Coefficient: Referenced to 25°C, ΔR taken at −15°C and +105°C

Specifications

Resistance Tolerance: ±1% (tolerances to 0.1% on special order).

Insulation Resistance: 100 megohms, minimum.

Overload/Overvoltage: 5 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds. ΔR, 0.5% max. or 0.5 ohms max., whichever is greater.

Thermal Shock: MIL-STD-202, Method 107, Cond. F, ΔR, 0.2% max. or 0.5 ohms max., whichever is greater.

Moisture Resistance: MIL-STD-202, Method 106, ΔR, 0.5% max. or 0.5 ohms max., whichever is greater.

Loadlife: 1000 hours at rated power, ΔR 0.5% max. or 0.5 ohms max., whichever is greater.

Lead Material: Gold Plated.

Type MP Chassis Mounted Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MP Chassis Mounted Power Film Resistors are made with Micronox® resistance films fired onto a ceramic substrate which is thermally bonded to an anodized aluminum base. By mounting this assembly directly to a metal surface for improved heat transfer, the high power capabilities of these unique resistors can provide increased packaging densities in many types of electronic equipment.

The special performance features of the Type MP Power Film Resistors include:

- Two case sizes that provide 15 watt and 30 watt ratings.
- Single-screw mounting to simplify attachment to the chassis or other heat conducting surface.
- A molded silicone case that encapsulates the resistor assembly to meet stringent environmental specifications.
- Extended-life stability better than 0.01% per 1000 hours has been demonstrated through a 5½ year, 50,000 hour program of continuous load-life testing.

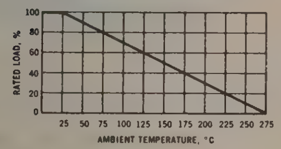
Detailed information on power ratings versus ambient temperature and chassis area has been provided on this page. A detailed report on the results of extended-life stability tests is available from the applications engineering group at Caddock Electronics, Inc.

Model No.	Power Rating†	Max. Voltage	Diel. Str.	High Temp. TC‡	Resistance Range		Dimensions				Terminals
					Min.	Max.	A	B	C	D	
MP312	15 Watts	300	600	50	10Ω	200 K	.600	.188	.185	.092	Gold Plated Solder Lugs
MP330	30 Watts	450	1000	50	10Ω	200 K	.850	.250	.250	.142	Gold Plated Solder Lugs

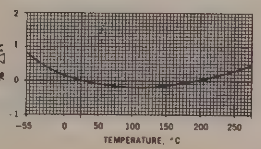
† Power rating based on chassis mounting with MP 312 on a 6″ x 4″ x 2″ x .040″ aluminum chassis and MP 330 on a 5″ x 7″ x 2″ x .040″ aluminum chassis.

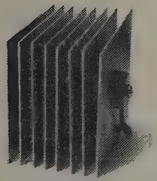
‡ TC: 50 ppm referenced to 25°C, ΔR taken at +150°C and +275°C. (Low temp. TC will be nominally —85 ppm/°C at —55°C. See typical R-T curve.)

DERATING CURVE



TYPICAL R-T CURVE





Stacked Type MP assemblies — constructed by bolting resistors between aluminum heat dissipating plates — provide a simple means of further improving packaging densities.

These charts of power ratings versus ambient temperature and chassis area show the high power levels that can be achieved with forced air cooling and with convection cooling in either vertical or horizontal orientation.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MK Low Cost Precision Film Resistors

Radial-Lead Resistors with Resistance Range from 10 ohms to 100 Megohms.

Here are the low cost precision resistors that provide high density packaging in large volume printed circuit applications. Available in two miniature rectangular package configurations with standard lead spacings, Type MK Precision Film Resistors now cover the entire resistance range from 10 ohms to 100 Megohms.

Constructed with Caddock Micronox® resistance films fired onto a solid ceramic substrate, Type MK Precision Film Resistors combine all of these outstanding advantages:

- ±1% resistance tolerance is standard and tolerances to ±0.1% are available on special order.
- Operating temperatures are from -55° C to +175° C.
- Full power rating at +125° C.
- Temperature Coefficient is only 50 PPM/° C up to 10 Megohms and 80 PPM/° C up to 100 Megohms, referenced to 25° C with the ΔR taken at -15° C and +105° C.
- Extended life stability is typically better than 0.1% per 1000 hours.
- Caddock's Non-Inductive Performance provides greater pulse fidelity and wider bandwidths in high frequency circuits.

This combination of performance advantages in a small, standardized case can simplify many engineering and production problems:

One size of Type MK resistor can replace many sizes of axial lead resistors.

This table of "RN" style axial lead resistors shows the many sizes and power ratings that can be replaced with either of the two models of Type MK Precision Film Resistors within the maximum allowable voltage ratings.

Comparison of Type MK and "RN" Ratings and Dimensions

Resistor Type	Power Rating	Maximum Resistance	Mounting Hole Spacing		
MK 120 or MK 620	**.50 WT.**	**40 Megohms**	**.150**	MK 132 5.0K 1% MK120 7.50K 1%	Even the smallest Type MK resistor can replace all of these RN type resistors.
MK 132 or MK 632	**.75 WT.**	**100 Megohms**	**.200**		
RN50	.05 WT	1 Megohm	.400		
RN 55	.10 WT	5 Megohms	.500		
RN60	.125 WT	10 Megohms	.625		
RN65	.25 WT	20 Megohms	.875		
RN70	.50 WT	40 Megohms	1.000		

All outline drawings full size — dimensions in inches.

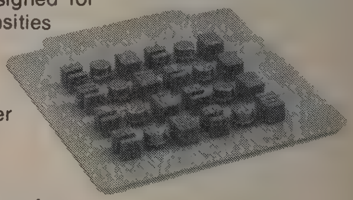
The largest Type MK — rated at .75 watt — requires less board space than even the 1/20th watt RN50.

The smallest Type MK — rated at .5 watt — provides power dissipation **equal** to the RN70 resistor. The RN70 resistor requires a mounting hole spacing of 1" and a side-to-side spacing of .250 inches, resulting in a total mounting area of .25 square inches — **10 times the area required for a .75 watt Type MK resistor!**

MK620
40MEG
1%
MK 63
100 MEG
1%

One standard resistor configuration can simplify board layouts.

With the exceptionally wide range of resistances that are available in each model of Type MK Precision Film Resistors, circuits can now be designed for maximum packaging densities without the need for leaving extra space where resistor value changes can require larger resistors or non-uniform lead spacings.



Standardization of resistor size can speed assembly procedures and reduce procurement costs.

The standardization of resistor size can pay additional dividends by simplifying assembly procedures. The radial leads do not require additional bending prior to insertion, and the standard lead spacing can reduce the time required for assembly.

The combination of higher power rating and smaller size can also lower procurement costs. By reducing the wide variety of sizes and types of axial lead resistors to a single, 'standardized' resistor type, unit prices can be lowered and inventory problems simplified.

Low Quantity Prices — Fast Delivery

Quantity prices for Type MK Precision Film Resistors are low, with many values priced under 60 cents each in medium-to-large production orders.

A pricing schedule for all values and models of Type MK Precision Film Resistors is available upon request. For specific price and delivery information, call or write to the main offices of Caddock Electronics in Riverside, California.

Type 1787 Current Shunt Resistor Networks

Accurate Current Sensing in Multi-Range Instrumentation

Type 1787 Current Shunt Resistor Networks utilize Caddock's Micronox® resistance films and advanced high thru-put laser manufacturing capabilities to achieve many vital advantages in precision current measurement circuits, including laboratory and bench-type digital instrumentation:

- The thin-profile single-package configuration replaces as many as four discrete current shunt resistors.
- The monolithic construction and standardized lead spacing simplifies installation.
- Caddock Micronox® resistance films provide exceptional stability for improved long-term measurement accuracy.

Eighteen standard models in six network arrangements provide the specific accuracy and resistance values required for a wide range of current measuring instruments and circuits.

Prototype quantities of most models of the Type 1787 Current Shunt Resistor Networks can be delivered from stock to within 6 weeks ARO.

★ Correct installation and accurate measurement of the networks' characteristics requires that Pins 4 and 5 be shorted within .100" of the body of the network. All measurements must be made at this point.

Model Nos. 1787-13 and 1787-132 are normally to be used in series with a customer purchased 0.1Ω wirewound resistor with Kelvin terminations.

CADDOCK
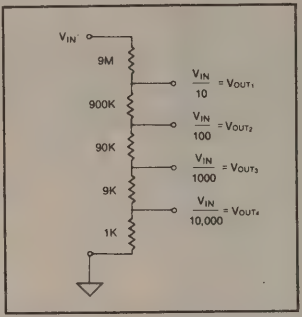
HIGH PERFORMANCE FILM RESISTORS

Type 1776 Precision Decade Resistor Voltage Dividers

Input Voltage Dividers for Digital Multimeters and Range-Switching Instruments.

Produced with Caddock Tetrinox® resistance films to achieve an exceptional combination of accuracy, temperature stability and long-term stability, these edge-mount precision decade resistor voltage dividers are now being widely specified for use in the input signal circuits of bench and laboratory digital instruments.

In addition to requiring less board space, these compact resistor networks deliver higher performance than selected discrete resistor sets and thin-film networks.



V_{IN}

9K
1K
$\frac{V_{IN}}{10} = V_{OUT_1}$
$\frac{V_{IN}}{100} = V_{OUT_2}$
$\frac{V_{IN}}{1000} = V_{OUT_3}$
$\frac{V_{IN}}{10,000} = V_{OUT_4}$

The 33 standard models in the expanded 'family' of Type 1776 resistor networks now include —

- 3-, 4- and 5-decade voltage dividers with ratios from 10:1 to 10,000:1
- 1,200 volts continuous ratings and overvoltage to 2,000 volts.
- Many combinations of ratio and absolute tolerances and ratio and absolute TC.

For complete information on quantity price and delivery, call our main offices in Riverside, California.

*Resistors Isolated

① **Ratio Tolerance:** Maximum ratio difference between any two resistors in the network.

② **Ratio Temperature Coefficient:** Ratio track between any two resistors in the network from 0°C to +70°C.

③ **Voltage Coefficient of Ratio (ppm/volt):** R_1 in series with any combination of R_2, R_3, R_4 and R_5, 100 volts to 1200 volts.

④ **Load Life:** Ratio stability of resistance under full load. 1200 volts DC applied to all resistors in series for 2000 hours at +70°C.

⑤ **Shelf Stability of Ratio:** Six months at shelf conditions.

⑥ **Overvoltage:** Maximum voltage of 1.67 times rated DC voltage. Volts DC or peak AC applied to R_1 and any combination of R_2, R_3, R_4, and R_5 in series with R_1 for 10 seconds.

⑦ **Voltage Rating:** DC or RMS AC voltage applied to all resistors in series.

Storage Temperature: −55°C to +85°C.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

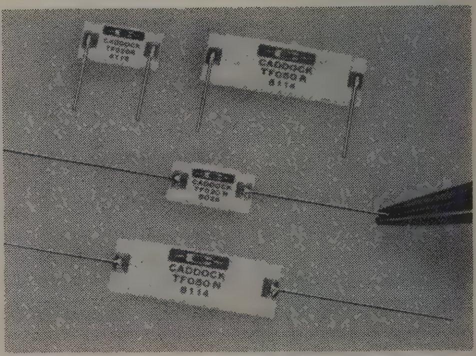
Type TF Low TC Ultra-Precision Film Resistors

Absolute TC to 5 PPM/°C — Values from 1 kohm to 125 Megohms — Absolute Tolerance to ±0.01%.

Type TF precision resistors employ the Caddock Tetrinox® resistance films — the resistance system that sets a new standard for high value, ultra-stable precision resistors that provide an exceptional combination of performance characteristics:

- **Ultra-Precision** – Seven standard resistance tolerances from ±1% to ±0.01%
- **A Wide Range of Resistance Values** – from 1 kohm to 125 Megohms.
- **Low Temperature Coefficients** – 5 PPM/°C, 10 PPM/°C and 15 PPM/°C.
- **Long-Term Stability** – to 0.01% per 1000 hours.

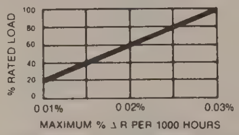
This completely new approach to quantity production of ultra-precision resistors is the result of combining our unique complex-oxide technology with an advanced high thru-put laser manufacturing capability.



Type TF – Standard Resistance Range – 1 kohm to 10 Megohms.

Model Number		Wattage @ +70°C.	Maximum Continuous Oper. Voltage	Resistance		Dimensions	
Axial Leads	Radial Leads			Min.	Max.	A	B
TF 020 N	TF 020 R	.33	300	1 K	2 Meg	.75 ±.020	.375 ±.020
TF 050 N	TF 050 R	.75	1400	10 K	10 Meg	1.5 ±.020	.50 ±.020

Load Stability:



Shelf Life: Typically 0.005% per year.

Type TF – Extended Resistance Range – 2 Megohms to 125 Megohms.

Model Number		Wattage @ +70°C.	Maximum Continuous Oper. Voltage	Resistance		Dimensions	
Axial Leads	Radial Leads			Min.	Max.	A	B
TF 626 N	TF 626 R	.33	300	2.01 Meg	35 Meg	.75 ±.020	.375 ±.020
TF 656 N	TF 656 R	.75	1400	10.01 Meg	125 Meg	1.5 ±.020	.50 ±.020

Load Stability: 1000 hours at rated voltage at +70° C, maximum ΔR 0.03%.

Shelf Life: Typically 0.010% per year.

Specifications

Apply to all Type TF resistor models

Absolute Temperature Coefficient: 5 PPM/°C, 10 PPM/°C or 15 PPM/°C. Referenced to 25°C, ΔR taken at –15°C and +105°C.

Resistance Tolerance: ±0.01%, ±0.025%, ±0.05%, ±0.10%, ±0.25%, ±0.50%, ±1.0%.

Storage Temperature: –55° C to +105° C.

Leadwire: Tinned Copper.

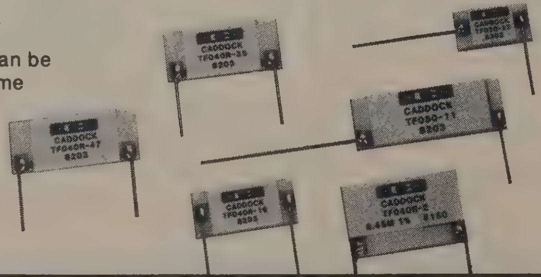
Custom Type TF Resistors

Additional cost savings can be realized when your high volume ultra-precision Type TF resistor is optimized for:

- Voltage rating.
- Power rating.
- Mechanical configuration.
- Ratio matched sets.



And for special requirements, custom Type TF resistors are available with:

- TCs of 5 ppm/°C, 10 ppm/° C 15 ppm/°C or 25 ppm/°C.
- Shelf stability of 0.0025% per year.

Type TF resistors can also be produced with custom-spaced radial leads that will plug directly into your existing circuit layouts.

Type T912 and T914 Precision Resistor Networks

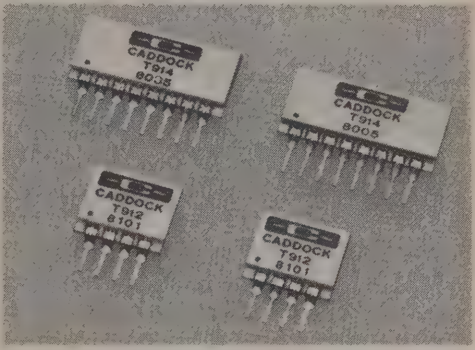
CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Resistor Pairs and Quads with Matched Characteristics for Precision Analog Circuits.

Type T912 and T914 Precision Resistor Networks are constructed with Caddock Tetrinox® resistance films to achieve the matched resistor characteristics and stability required by highly accurate amplifier circuits, voltage reference circuits and precision bridge circuits.

- **Ratio Tolerances** – from ±0.1% to ±0.01%.
- **Ratio Temperature Coefficients** – 10 PPM/°C, 5 PPM/°C or 2 PPM/°C.
- **Absolute Temperature Coefficient** – 25 PPM/°C.
- **Ratio Stability of Resistance at Full Load for 2000 hours** – Within ±0.01%.
- **Shelf Life Stability of Ratio for 6 Months** – Within ±0.005%.

Both the T912 and T914 are available in 14 standard resistance values between 1000 ohms and 1 Megohm. Caddock's high thru-put manufacturing capability assures delivery of prototype and large-volume production quantities from stock to within 6 weeks after receipt of order.



Standard Type T912 and T914 Precision Resistor Networks

In addition to the 14 standard **equal value** models of the Type T912 and T914, the Type T912 can also be ordered with —

- **10:1 resistance ratio** — for use with gain-setting amplifiers.
- **9:1 resistance ratio** — for use in voltage reference dividers.

T912 - A 10K - 010 - 02

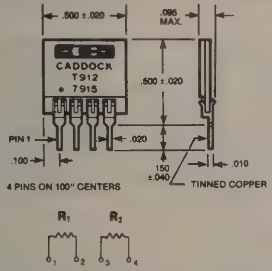
Special or mixed resistance values are available as custom networks. See the custom section at the bottom of this page.

*(This information appears on the back side of the network)

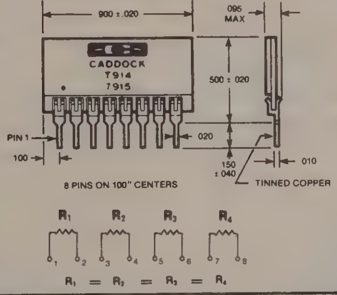
Type T912

Ratios Available: 1:1, 9:1, 10:1 and Custom.



Type T914

Ratios Available: 1:1 and Custom.



Specifications

Absolute Tolerance: 0.1% for all resistors.

Absolute Temperature Coefficient: ±25 PPM/°C. Referenced to 25°C, ΔR taken at 0°C and 70°C.

Voltage Rating: 30 Volts DC or RMS AC applied to R_1, R_2, R_3, or R_4.

Power Rating: 0.10 watt applied to R_1, R_2, R_3, R_4 (not to exceed rated voltage).

Package Power Rating: Type T912, 0.200 watt. Type T914, 0.400 watt.

Storage Temperature: -55°C to +105°C.

Insulation Resistance Between Isolated Pins: Pin 2 to Pin 3, Pin 4 to Pin 5, or Pin 6 to Pin 7, 1000 Megohms, minimum.

Dielectric Strength Between Isolated Pins: 50 volts RMS AC.

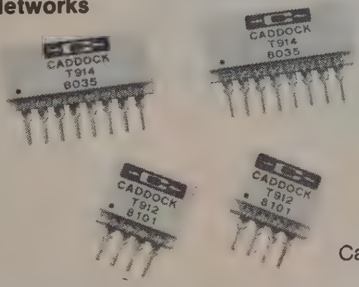
Ratio Stability Under Load: Ratio change between any two resistors in the network under full load for 2000 hours at 70°C, 0.01% maximum.

Shelf Stability of Ratio: Six months at shelf conditions, 50 PPM.

Custom Model T912 and T914 Precision Resistor Networks

For applications requiring non-standard resistance values, the T912 and T914 custom configurations can include these special features:

- Mixed resistance values with a maximum ratio of 250-to-1. (Example: 1.0 Megohm and 4K)
- Absolute TC as low as 15 PPM/°C.
- Ratio TC as low as 2 PPM/°C.
- Custom voltage ratings.
- Matched resistors of any special value between 1K and 2 Megohms.



Identification of the electrical characteristics of each T912 and T914 resistor network is included on the back side of the network.

For performance, price and availability of custom T912 and T914 resistor networks, contact Caddock Electronics' main offices in Riverside, California.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type TK Temp-Stable Precision Film Resistors

Small Package with Low TC of 10 PPM/°C and Resistance Range from 1 kohm to 10 Megohms.

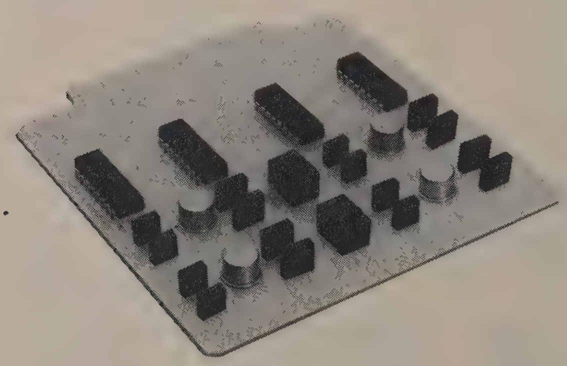
Caddock introduces a new design element for precision electronic circuitry — an advanced technology breakthrough that solves many critical circuit stability problems — the **Type TK Temp-Stable Precision Film Resistors with the Tetrinox® resistance system.**

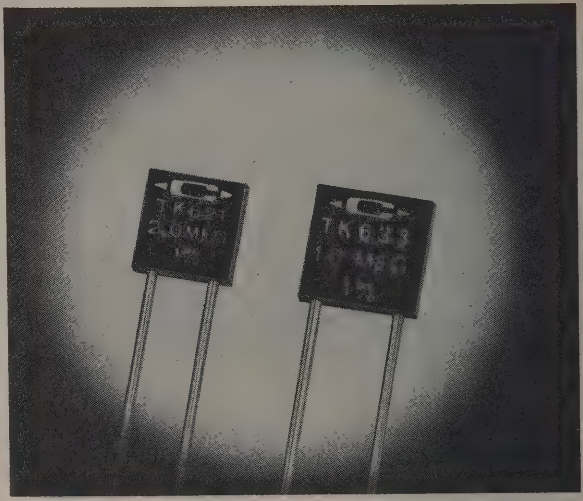
Type TK Temp-Stable Precision Film Resistors provide a combination of performance advantages never before available in a resistive component:

- **Temperature Stability** — better than 10 PPM/°C over the entire temperature range from −55°C to +125°C!
- **Long-Term Absolute Stability** — better than ±0.05% per 2000 hours of operation.
- **Extended Resistance Range** — from 1000 ohms to 10 Megohms.
- **Precision Tolerances** — ±1% is standard, and tolerances as close as ±0.05% are available.
- **Wide Operating Temperature Range**—from −55°C to +175°C.
- **Small Size** — with two miniature rectangular cases for maximum packaging density and minimum mounting area.
- **High Power Density** — with power ratings of .2 watt and .3 watt in molded cases, the largest of which is a standard CK 06 package.
- **Highest Performance-to-Cost Ratio** — with many values priced below $2.00 each in 1000 lot quantities.

(Photos show resistors full size)

Building on 20 years of experience with our unique complex-oxide technology, Caddock has perfected the Tetrinox® resistance system — the first high resistance system to provide a TC that is well within 10 PPM/°C and that is also essentially linear over the entire temperature range from −55°C to +125°C.





The exceptional performance of Type TK resistors can achieve improvements in many circuit applications:

Low TC "Matched-Pair" Voltage Dividers Can be Assembled Without Pre-Selection of Resistors.

An important application for Type TK resistors is in "matched-pair" voltage dividers where the low 5 PPM/°C temperature coefficient provides ratio tracking of less than 10 PPM/°C without resistor pre-selection or special testing.

With factory selection, Type TK resistor pairs can be matched to within 1 PPM/°C.

Extended Resistance Range Reduces Power Requirements

Because the Type TK resistors provide resistance values as high as 10 Megohms — values that are up to 100 times higher than other types of ultra-low TC resistors — engineers can now design precision circuits with lower current drain and lower power requirements.

High Density Packaging

The radial lead mounting and small rectangular case of Type TK resistors permits high packaging densities in low profile electronic circuitry. And because both models of Type TK resistors are available in an exceptionally wide range of resistances, lead spacing and mounting space can be standardized.

For additional information on the Type TK resistors for your high stability circuits, contact the engineering staff of Caddock Electronics in Riverside, California. They can assist you in determining the exact temperature coefficient and tolerances your application requires, and will provide both evaluation and production quantities of these new resistors on fast-delivery schedules.

HIGH PERFORMANCE FILM RESISTORS

Type TK Temp-Stable Precision Film Resistors — Standard Resistance Range

Model No.	Temperature Coefficient ppm/°C †	Resistance		Wattage @ +125°C	Max. Working Voltage	Dielect. Str'gth	Dimensions	Encap-sulation	Leadwire
		Min.	Max.						
TK121	5, 10 or 20	1K	500K	.2	200	300	Ref. Case "A" Dwg.	Transfer Molded Type	Tinned Copper
TK133	5, 10 or 20	1K	1.5 Meg.	.3	300	400	Ref. Case "B" Dwg.	Transfer Molded Type	Tinned Copper
TK139	5, 10 or 20	1K	1.5 Meg.	.3	300	400	Ref. Case "C" Dwg.	Transfer Molded Type	Tinned Copper

† Specify TC when ordering. 10 PPM/°C is standard.

Resistance Tolerance: ±1% Standard. (Tolerances to ±0.05% on special order.)

Operating Temperature: −55°C to +175°C.

TC Temperature Range: −55°C to +125°C.

Overload:* 6.25 times rated power for 5 seconds at voltages not to exceed 1.5 times maximum rated working voltage, R shift less than 0.05%.

Thermal Shock: Mil-Std-202, Method 107, Condition B, R shift less than 0.05%.

Low Temperature Operation:* R shift less than 0.02%.

Dielectric Withstanding Voltage:* R shift less than 0.02%.

Moisture Resistance:* Mil-Std-202, Method 106, R shift less than 0.02%.

Load Life:* 2000 hours at +125°C, R shift less than 0.05%.

Shelf Life (Typical): 25 ppm/year.

Insulation Resistance: 10,000 Megohms.

Vibration:* R shift less than 0.01%.

Shock:* R shift less than 0.02%.

*Test methods per specifications and procedures of Mil-R-55182/9.

HIGH PERFORMANCE FILM RESISTORS

Type T1794 Custom Precision SIP Resistor Networks

Resistor Networks with Custom Package Size and Custom Performance.

For precision analog designs with special circuit requirements Caddock Type T1794 Custom Precision SIP Resistor Networks can include from 2 to 15 resistors per assembly and are available with performance that includes -

- Absolute tolerances from 1.0% to 0.1% - to as close as 0.025%.
- Ratio tolerances from 1.0% to 0.1% - to as close as 0.025%.
- Resistance tolerances from 500 ohms to 50 Megohms.
- Absolute temperature coefficients of 50 PPM/°C, 25 PPM/°C and 15 PPM/°C.
- Ratio temperature coefficients from 25 PPM/°C to 10 PPM/°C - to as close as 5 PPM/°C.
- Ratio stability of resistance at full load for 2000 hours to within ±0.02%.
- Shelf life stability of ratio for six months to within ±0.005%.
- Custom voltage and power ratings.

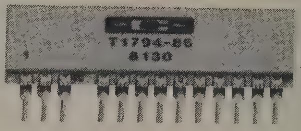
The unique thin-profile, single-in-line edge-mount package design allows the wide range of flexibility necessary to blend the performance of Tetrinox® resistance technology with particular circuit specifications to arrive at the final network package size, pin spacing and pin style.

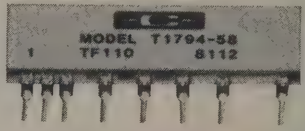
In addition to the normal upright configuration with SIP-socket pin spacing, special low-profile packages with extended leads and right-angle leads are also available.

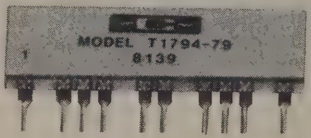
By optimizing both performance and configuration many designers find that these precision networks can achieve savings in both component cost and insertion costs — even in production-lot quantities as low as 1000 units.

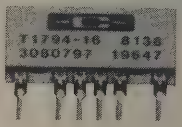
A large part of our high thru-put manufacturing capacity is now committed to the production of these custom precision resistor networks. Custom network designs for requirements that range from 500 networks per year to over 400,000 networks per year are now in production.

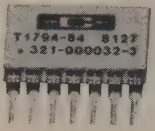
For immediate engineering information on the custom precision resistor network configuration that can best meet your needs, call or write to our Applications Engineering Group in Riverside, California, and we will be pleased to provide both technical performance and pricing information.

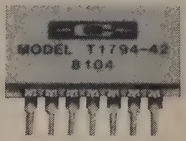


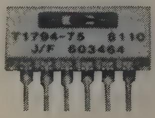




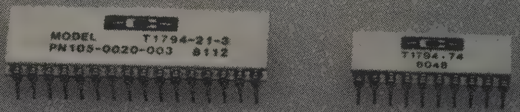




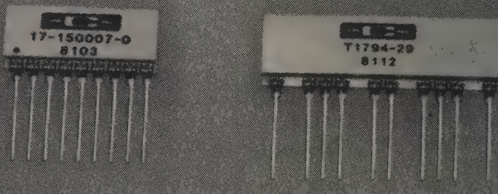




Optional Pin Styles



Low-profile, single-in-line package with one row of right-angle pins.



SIP package with extra-long pin length.

High Performance Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

The outstanding levels of performance and reliability that Caddock resistors provide is maintained through a continuous program of testing and process control that includes every step in the production process.

Manufacturing Control

Our manufacturing controls include processes for power conditioning, over-voltage conditioning and maximum temperature conditioning. We also perform many in-process tests to verify the performance levels and consistency of all of our resistor types, and to screen out defects not detectable by visual inspection.

Quality Control

The Caddock Quality Control System covers every step in the manufacturing process from the examination of incoming raw materials to the final testing and packaging of each resistor.

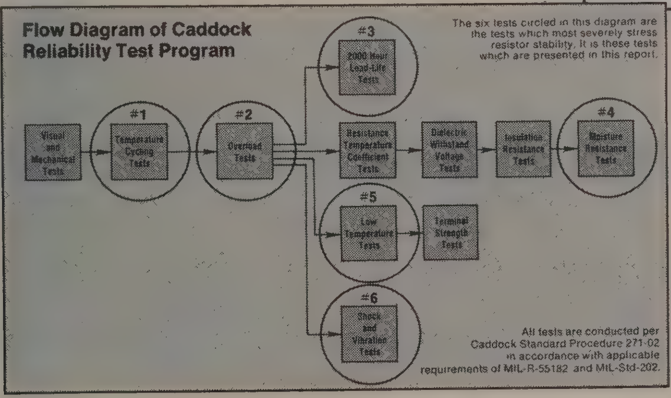
To meet the most stringent QC requirements, Caddock's Quality Control Procedures have been approved as being in conformance to the requirements of NASA NHB5300.4(1C) and MIL-1-45208 in recent surveys.

Reliability Verification

In addition to the tests for tolerance, stability and temperature characteristics that are part of our normal manufacturing procedures, we also perform semi-annual reliability tests to confirm compliance to our exacting product specifications.

The flow diagram of the Caddock Reliability Test Program illustrates the sequence of the eleven tests in this program.

The test procedures in the Caddock Reliability Testing Specification 271-02 generally follow the format of MIL-R-55182 and MIL-Std-202. The results of these tests may be used to qualify Caddock resistors for substitution in existing designs.



Flow Diagram of Caddock Reliability Test Program

The six tests circled in this diagram are the tests which most severely stress resistor stability. It is these tests which are presented in this report.

All tests are conducted per Caddock Standard Procedure 271-02 in accordance with applicable requirements of MIL-R-55182 and MIL-Std-202.

Reliability Test Summary — "Caddock Report No. 1".

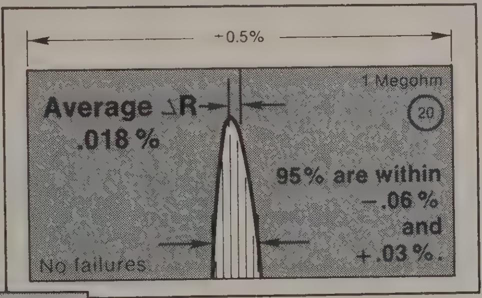
To provide electronic engineers with actual stability data — data that can be used to determine actual improvements in circuit performance — we have compiled test results taken since 1972 from our continuing reliability program.

Of the eleven tests in this program, we have graphically summarized data from the six tests that measure resistor stability under conditions most important to circuit designers:

1 — Temperature Cycling Tests
2 — Overload Tests
3 — 2000 Hour Load-Life Tests
4 — Moisture Resistance Tests
5 — Low Temperature Operation
6 — Shock and Vibration Tests

This stability data appears in a series of 96 graphs that show the actual stability of 740 Caddock High Performance Film Resistors.

The individual and average resistance change is also shown in these graphs for the low, high and 'critical' values, to provide data that can be used to pre-determine actual circuit performance and long-term equipment specifications.



A copy of the 12-page brochure describing the results of these reliability and stability tests is available from the main offices of Caddock Electronics, Inc. in Riverside, California.

PRECISION THICK FILM NETWORKS

Cal-R thick Film Passive Systems develops and produces, to customer requirements, packaged resistor networks including digital to analog A-D binary ladders (through 12 bits), BCD bipolar ladders and custom precision resistor networks.

Cal-R manufactures ceramic substrates for the Digital Watch market and custom R-C networks for hi-rel and commercial applications.

Cal-R thick film resistor compositions fused to a high purity 96% aluminum substrate insure low thermal gradients, high thermal stability and matched electrical characteristics.

CAL-R, INC. WIRE WOUND RESISTORS

PRECISION POWER RESISTORS

FEATURES

1. Copperweld leads standard. Nickel A or Alloy 180 available.
2. Core-alumina and steatite ceramics.
3. Silicone coating to give maximum wire protection and extra high resistance to moisture.
4. Failure rates of less than .006% per 1000 hours @ +25°C with 60% confidence.

ELECTRICAL CHARACTERISTICS

A. TOLERANCES: 5.0% to .01%. 1% standard for off-shelf delivery. Special matching available to .001% tolerance.
B. TEMPERATURE COEFFICIENT: 20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.
C. Dielectric strength greater than 1000 V.A.C.
D. Special configurations available on request.
E. SA (X) Types Thermal shock proof from 275°C to —55°C.
F. SAV (X) Types Thermal shock proof from 350°C to —55°C.
G. STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.1% drift in 2000 hours operation at full Cal-R wattage rating for 1% tolerance parts.
H. RESISTANCE RANGES: .05 ohms to 250K ohms.
I. INDUCTIVE TYPES: Single layer space wound with largest wire permissible.
J. Non-inductive Types feature dual balanced windings for minimum inductance.

ENVIRONMENTAL

Meet or exceed applicable paragraphs of MIL-R-26E and MIL-R-39007.

*—Available in Noninductive (code symbol "X").

1 —Nominal, based on maximum 275°C. Hot spot at 25°C. Ambient. (char. U)

2 —Nominal, based on maximum 350°C. Hot spot at 25°C. Ambient. (char. V).

3 —Tolerance for noninductive types below 150Ω ±.062.

4 —Noninductive maximum resistances are one-half of listed values.

POWER RESISTORS

FOUR STANDARD MC TYPE RESISTOR SPECIFICATIONS IN MIL-R SIZES

OUTSTANDING FEATURES

1. Copperweld leads hot tin dipped for maximum solderability.
2. Completely welded construction terminal to terminal.
3. High density extruded aluminum housing provides superior heat conduction.
4. Housing deep finned for maximum heat dissipation under natural and forced convection.
5. Windings—High uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. MCX (non-inductive) types have dual balanced windings for minimum inductance.
6. Core—Steatite ceramic, centerless ground for uniformity.
7. Silicone coated resistance element to give maximum wire protection and extra high resistance to moisture.

ELECTRICAL CHARACTERISTICS

Tolerances—5.0% to .05%, 1% standard for off-shelf delivery.

Temperature Coefficient—20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.

Dielectric strength greater than 1000 V.A.C. on MC-100 and MC-250, and greater than 2000 V.A.C. on MC-500.

Dielectric Test—performed on 100% basis.

Stability—consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full Cal-R wattage rating for 1% tolerance parts. Resistance ranges—.05 ohms to 210K ohms.

ENVIRONMENTAL

Meet or exceed all requirements of MIL-R-18546D, including "N" characteristic and MIL-R-39009.

CAL-R®, INC. WIRE WOUND RESISTORS

POWER RESISTORS . . . Cont'd.

T-5 (5 WATTS) OUTSTANDING FEATURES

1. Copperweld leads hot tin dipped — Gold plated DUMET or "A" nickel available.
2. High density extruded aluminum housing provides superior heat conduction.
3. Housing deep finned for maximum heat dissipation.
4. Windings — high uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. T5X (non-inductive) types have dual balanced windings for minimum inductance.
5. Core — Alumina ceramic, centerless ground for uniformity.

T-3 (3 WATTS) OUTSTANDING FEATURES

1. Windings — Reverse pie wound — all pies filled for maximum heat dissipation.
2. Unique recessed end cap designed to isolate winding termination from all lead stress.
3. Protective overcoating covering entire resistor before molding insures maximum protection and secures winding without introducing stress.
4. Resistor element encased in nonburning epoxy by transfer molding techniques.
5. Copperweld leads hot tin dipped standard — Gold plated DUMET or "A" nickel available.

T-5 ELECTRICAL CHARACTERISTICS

TOLERANCES: 5.0% to .05%. 1% standard for off-shelf delivery.
TEMPERATURE COEFFICIENT: 30 ppm/°C standard. Special T.C.'s to 5 ppm/°C available.
STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full CAL-R wattage rating for 1% tolerance parts.
RESISTANCE RANGES: .5 ohms to 3 K ohms.
DIELECTRIC STRENGTH: greater than 500 V.A.C.
DIELECTRIC TEST: performed on 100% basis.

T-3 ELECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.
TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.
STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.
WINDINGS: multiple pie reversed type to minimized inductance. Special windings available to provide fast rise times.
RESISTANCE: Ranges 3 K ohms to 300 K ohms.
MAXIMUM WORKING VOLTAGE: 200V.

PRECISION RESISTORS

OUTSTANDING FEATURES

1. All pies filled for maximum heat dissipation.
2. Unique recessed end cap designed to isolate winding termination from all lead stress.
3. Terminals welded to end cap for maximum strength — will withstand 15 lbs. linear pull.
4. Double slots tangent to mandrel to prevent shorting between pie windings eliminating space-wasting construction features or the need for insulating tape.
5. Protective overcoating covering entire resistor before molding insures maximum moisture protection and secures winding without introducing stress.
6. Standard leads — copperweld hot tin dipped or annealed Dumet gold plated.
7. Special matching available to .001% tolerance.

ELECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.

TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.

STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.

WINDINGS: multiple pie reversed type to minimized inductance (except on Miniature Series). Special windings available to provide low rise times.

RESISTANCE: Ranges 1 ohm to 10 megohms.

PHYSICAL CHARACTERISTICS

MATERIAL: Hi-Temp epoxy with matching coefficient of expansion between core and case. Leads are gold over Dumet.

ENVIRONMENTAL

PRECISION RESISTOR NETWORKS

Cal-R engineers, specialists in advanced network design, offer precision assemblies, packaged to meet the most exacting specifications, allowing the circuit designer maximum freedom without costly packaging problems.

GENERAL SPECIFICATIONS

RESISTOR VALUES: From 1 ohm thru 5 megohms
FULL SCALE ACCURACY: to .005%
TEMPERATURE COEFFICIENT TRACKING: to 1 PPM/°C.
TEMPERATURE COEFFICIENT ABSOLUTE: to 2 PPM/°C.
AMBIENT TEMPERATURE RANGE: —55°C to +125°C.
STANDARD TEMPERATURE COEFFICIENT: 0 to ±10 PPM.
STABILITY: to 10 PPM per year.
FAST RECOVERY TIME: to within .02% of final value within 100 ns.

CARBORUNDUM NON-INDUCTIVE POWER RESISTORS

Choose Type SP for great A-C power handling capability, whether it be at power frequency or many megahertz.

Choose Type A when high resistance is required in a high power non-inductive resistor.

Choose Type AS for its ability to absorb huge amounts of energy and for its non-inductive property at high voltage.

CHARACTERISTICS	Type SP	Type AS	Type A
Maximum Operating Temperature: °C	350	230 150*	230
Temperature Coefficient: Percent per degree C, −55°C to maximum rated temperature	±0.075	−0.075	−0.20
Voltage Coefficient: Maximum percent per kilovolt per inch active length (overall length less termination)	1.0	1.0	—
Short Time Overload: Maximum percent change after 5 cycles 10 times rated power, 5 seconds on, 90 seconds off	2.0	2.0	—
Moisture Resistance: Maximum percent change when tested per MIL-STD-202 method 103	2.5	2.5	2.5

*with epoxy insulation for use in oil

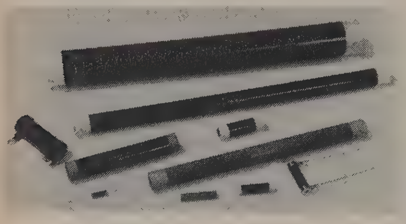
SERIES 800 AND 1000

This general line is available in a wide variety of sizes and terminations. They retain the non-inductive and heavy load characteristics of all Carborundum ceramic resistors. These resistors can handle up to 1000 watts, 165 KJ and 165 KV in resistance values from 1 ohm to 1 megohm.



Parts are specified by the four or five character type number (for example 885SP, 888AS, 890A), the first two digits of the resistance, a single digit to indicate the power of ten multiplier, and a "J" for ±5%, a "K" for ±10%, or an "L" for ±20%. Where the resistance is less than ten ohms, the power of ten multiplier is not used, and an "R" replaces the decimal point. Thus R50 = 0.50 ohm, 7R5 = 7.5 ohm, 220 = 22.0 ohm, 152 = 1500 ohm, etc. *Type AS with a suffix letter to part number denotes optional construction: "D" for dielectric coating; "O" for oil application; "N" for No Arc terminal. Consult Customer Service for additional options and part number detail. A typical part number would be 886AS501KD. This represents a type AS resistor, 5" long x ¾" diameter, 500 ±10% ohms, with dielectric coating.

CARBORUNDUM

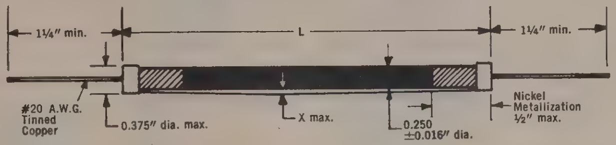
CARBORUNDUM NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

Series 102/104/106/109AS & SP Pencil-type Resistors

These ¼″ diameter resistors are available in a variety of lengths. Pencil shaped resistors offer unique non-inductive and high-voltage properties in a compact, easily-wired configuration.

Type AS for high voltage and energy applications.

Type SP for high AC power handling capabilities.



Length	Type No.	Resistance Available (ohms) Min.	Resistance Available (ohms) Max.	Average Power @ 40°C (watts)	Peak Energy (joules)	Peak Voltage (volts)

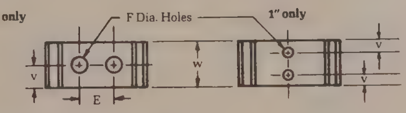
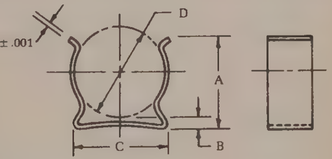
Termination and Mounting

Electrical connection to the resistive bodies of resistors is made by flame-sprayed metal end bands. The standard metal is aluminum for type SP, nickel for types AS and A. Special terminations of brass or copper overspray or tinned ends are readily available specials. Add "B," "C," or "T" respectively to the part number to designate these special terminations.

In most cases, connections to the resistors may be made by stock clips such as these:





CLIPS DIMENSIONS

Stock No.	Size	Holes	A	B	C	D	E	F	T	V	W

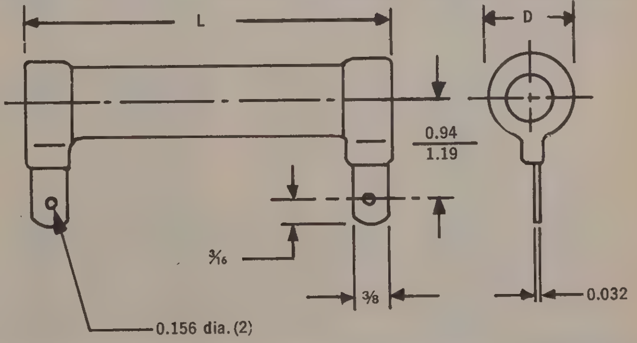
Material: Beryllium Copper
Finish: Electro Tin Plate

TYPE AS EPOXY COATED STYLE

Carborundum Type AS High-Energy Ceramic Resistors are available with an epoxy coating which protects the resistors body from contaminants. It is especially useful where the resistor is employed in an application where it is not protected from a dirty ambient atmosphere or where it is immersed in a cooling or dielectric fluid.

In air the coated resistor can safely dissipate 75% of the power dissipated by an uncoated part. Energy level in oil should not exceed 300 joules/cc.

The overall length, L, of the coated resistor is approximately 0.25″ longer than the uncoated part; the diameter, D, is approximately 0.30″ greater.



The Carborundum Company
Electric Products Division, Post Office Box 339, Niagara Falls, N.Y. 14302
Tel: (716) 278-2521 • Telex: 91-555 (CARBO GLO NGF)

CARBORUNDUM

CARBORUNDUM NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

TYPE AS DISC AND WASHER STYLES

Carborundum Type AS Disc and Washer Ceramic Resistors are a bulk-type low resistance element, and therefore have the ability to absorb instantaneously great surges of energy with virtually zero inductance.

Maximum Peak Voltage: 5000 volts.

Maximum Temperature: 230°C.

Power Rating: In free air, parts will safely dissipate 2.5 watts per square inch of surface area at 40°C.

Temperature Coefficient of Resistance: −0.1%/°C to 0.0%/°C.

CARBORUNDUM® VARISTORS

Standard varistors described below have a 10% tolerance on voltage. Also available: leadless discs and rods, voltages specified at intermediate values or at other currents, and voltage tolerances of ±15% and ±20%. Available at extra cost: voltage tolerances of ±5% and ±7%, color coding, and special coatings.

Standard rod varistors have a blue epoxy coating. Available at extra cost: formed leads for printed circuit board insertion.

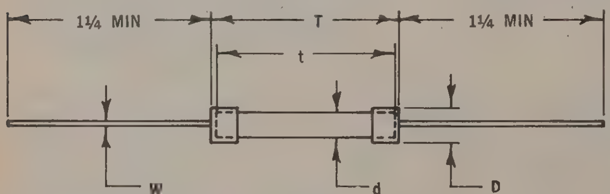

Figure 1

Standard disc varistors have a black flame-retardant PVC coating. Also available: Glyptal coating and kinked leads for printed circuit board insertion.

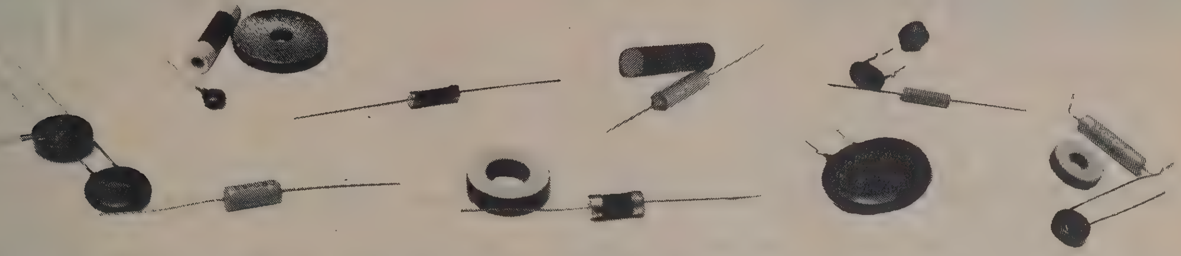
CARBORUNDUM

CARBORUNDUM® VARISTORS



Carborundum silicon carbide varistors are voltage-dependent resistors which are offered in a wide variety of configurations, including discs, rods, and washers. In addition to the sizes shown on these pages, rods are available up to 18 inches in length, washers are available up to 3½ inches in diameter. Typical uses include limitation of peak discharges, spike suppression, stabilization of voltages, and generation of non-linear functions.

Varistors are specified by the voltage measured across them, suitably toleranced, at some constant current. The slope of the voltage-current characteristic is most often given by the maximum voltage ratio for two specified currents.

In general the characteristic for a varistor may be approximated by the equation:

$$i = Ke^n$$

where i and e are instantaneous current and voltage respectively, K is a proportionality constant, and n is an exponent applicable in the range in which the varistor is used: most often it is between 3 and 5.

The silicon carbide varistor is a "forgiving" component. When hit by a voltage surge, the energy is absorbed throughout its body, not at a junction. A voltage surge beyond the design level causes substantial increase in current and energy absorption, but not a catastrophic failure.

SMALL DISC VARISTORS

Carborundum Part Number	Volts ±10% @ 1.0 ma.	Volts @ 1.0 ma. ÷ Volts @ 0.1 ma. (maximum)

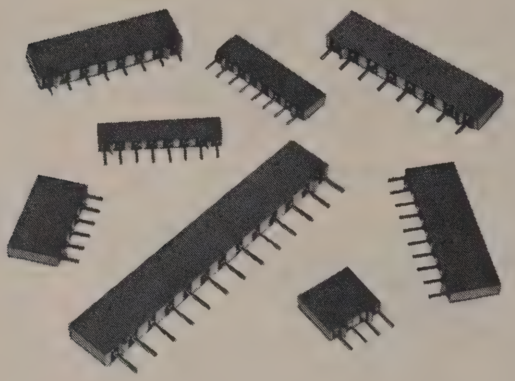
SINGLE-IN-LINE CERMET RESISTOR NETWORKS

CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS . . . Leader in the field of **Low Profile** space-saving Cermet Resistor Modules. Readily recognizable because of the familiar CTS Blue.

As is well illustrated, these modules have been specifically designed to save space.



750 Series

Environmental Performance Characteristics		
For units less than .340″ high, refer to page 8 for performance characteristics. Test	Allowable Resistance Change CTS Max△ R	CTS Avg. △ R
Load Life: 1,000 hrs., 0.1 watt per resistor at 70°C	±0.40%	±0.20%
Moisture Resistance: 0.1 rated wattage at 70°C, 90-98% humidity, 1,000 hrs.	±0.50%	±0.20%
Insulation Resistance: Measured wet after moisture resistance test, 200 VDC	Greater than 1000 megohms	
Low Temperature Exposure: −63°C, 4 hrs.	±0.10%	±0.04%
Thermal Shock: 5 cycles, −63°C to +125°C, no load	±0.10%	±0.03%
Short Time Overload: 2.5 times rated voltage, 5 sec.	±0.25%	±0.05%
Terminal Strength: 5 lb. tensile & compression, 30 sec.	±0.10%	±0.03%
Effect of Soldering: 60/40 solder, 246°C, 2 sec.	±0.10%	±0.05%

So if you want to reduce the size of your design or add more complex circuitry without increasing size, CTS rates top consideration.

Most appealing is the fact that "The Little Blue Brick" is an extensive "Off The Shelf" item with CTS.

FEATURES:

- Compact edge mount modules
- Ultra high stability and reliability
- Automatic insertion capabilities
- Reduced insertion time
- Fewer items to inventory
- Space savings over individual resistors
- Available with capacitors and/or active devices*
- Available with .100″ and .125″ lead centers

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: Cermet thick film single-in-line resistor networks.

Standard Resistance Range: 33Ω through 1 MegΩ.

Special Resistance Range: Below 33Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ — 2.5%

Ratio Matching:
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ — ±5%

Standard Temperature Coefficient: ±250 ppm/°C.

Special Temperature Coefficient: ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: to ±0.5% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 60/40 Tin/Lead.

Lead Strength: 5# pull.

Wattage Rating @ 70°C (see chart below).

DUAL-IN-LINE CERMET RESISTOR NETWORKS

CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS Series 760 Dual-In-Line cermet resistor networks are available in 8, 14, 16, and 18 lead styles. CTS now offers you a choice of four popular space-saver packages. All are designed to simplify automatic insertion along with IC's and other DIP products for reduced costs. Easy to hand mount, too. Available without cover coat, so you can trim for circuit balance in your own plant. Choose from standard circuits available off-the-shelf for immediate delivery or custom designed to your specifications.

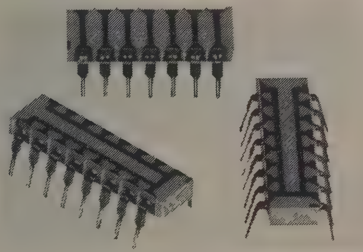
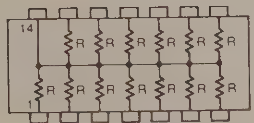
CONDUCTOR MODULES

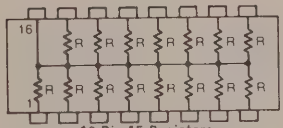
Eliminate time consuming installation of jumper wires.

Density of Jumpers:
Depending on number of pins, screened on both sides of substrate. Built to customer specifications and requirements.



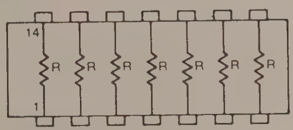


14 Pin-13 Resistors
Part Number 760-1-R+value

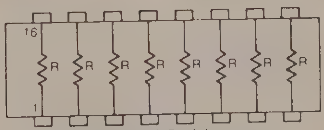


16 Pin-15 Resistors
Part Number 761-1-R+value

APPLICATIONS: MOS/ROM pull-up/pull-down; Open collector pull-up; "Wired OR" pull-up; Power driver pull-up; High speed parallel pull-up; TTL unused gate pull-up; TTL input pull-down; Digital pulse squaring.

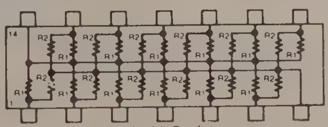


14 Pin-7 Resistors
Part Number 760-3-R+value

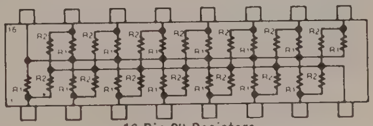


16 Pin-8 Resistors
Part Number 761-3-R+value

APPLICATIONS: "Wired OR" pull-up; Power driver pull-up; Power gate pull-up; Line termination; Long-line impedance balancing; LED current limiting; ECL output pull-down resistors; TTL input pull-down.



14 Pin-24 Resistors
Part Number 760-5-R+values



16 Pin-28 Resistors
Part Number 761-5-R+values

Resistance Values R1/R2	Part Numbers

220Ω/330Ω	760-5-R220/330	761-5-R220/330
1.5K/3.3K	760-5-R1.5/3.3K	761-5-R1.5K/3.3K

Other combinations available upon request

Pulse Squaring TTL Terminators

CTS Terminator networks consist of two resistor pairs of the above value combinations. The resistors are connected together in series with a common line for power and a common line for ground. The junction of each pair is brought out to a separate terminal.

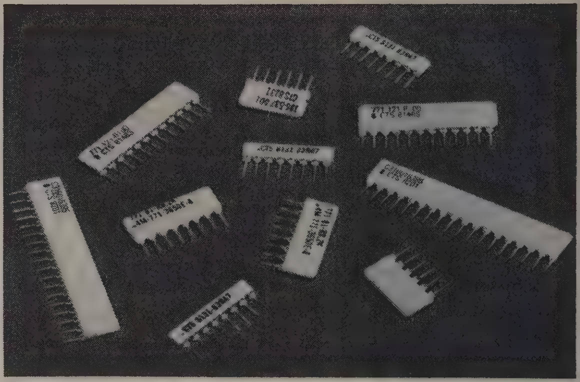
SINGLE-IN-LINE CERMET RESISTOR NETWORKS

CONFORMAL COATED SERIES 770-771

These conformal coated networks are supplied in both the 4.95mm/.195 in. max. and 8.89mm/.350 in. max. height. Custom networks can be supplied with special resistor values and resistor combinations and tolerance to meet most customer applications.



FEATURES:

- High reliability cermet resistors
- Space saving over individual resistors
- Available with capacitors
- Available at 4.95mm/.195 in or 8.89mm/.350 in. high; 2.54mm/.100 in. pin spacing
- 770 series available off-the-shelf in many values

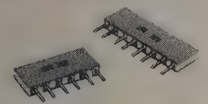
SINGLE-IN-LINE CERMET RESISTOR NETWORKS

750 SERIES SINGLE-IN-LINE CERMET RESISTOR NETWORKS



FEATURES:

- Low profile construction
- High reliability
- Alumina substrate
- Low cost automatic insertion and handling

- 6, 8 and 10-pin modules on .100″ lead centers
- Resistance: 32Ω - 220 KΩ* ±2% (for 750-85 Series, see table below schematic)
- Power ratings @ 70°C per module: 6 pin .9 watt; 8 pin 1.1 watt; 10 pin 1.5 watt
- Typical TC: ±100 ppm°C

SURFACE MOUNT RESISTOR NETWORKS

SPECIFICATIONS

***Resistance Range**	Standard 33 ohm to 1.0 Megohm
Resistance Tolerance:	Standard: ±2%
***Max. Operating Voltage:**	Special: 0.5% or 0.5 ohm (whichever greater)
***Temp. Coefficient:**	50V not to exceed rated power
***Operating Temp. Range:**	±100 PPM @ −55°C to +125°C
Storage Temp. Range:	−55°C to +125°C
Dielectric Strength:	−55°C to +125°C
***Power Rating:**	100V

	Resistor Power	Total Network Power			
		8P	14P	16P	18P
@ 70°C	.07	.25w	.4w	.5w	.62
@ 25°C	.1	.38w	.6w	.75	.9w

* Custom networks can usually be designed to exceed resistance range, individual resistor power, maximum operating temperature and maximum operating voltage standards. TCR may be affected by some custom network requirements.

ENVIRONMENTAL PERFORMANCE SPECIFICATIONS

Test	Max. % △ R	Mil Std. 202 Method	Test Cond.	Test Description
Thermal Cycling	0.5%	107	B	5 cycles −65°C to +125°C
Short Time Overload	0.5%	—	—	2½ x rated voltage 5 sec. (Series 770: 100V max.)
Moisture Resistance	0.5%	106	—	240 hours .1 rated load −10°C to +65°C 90% RH
Load Humidity	1.0%	—	—	1000 hours .1 rated load 65°C 90-98% RH
High Temp Exposure	1.0%	—	—	240 hours no load @ 125°C

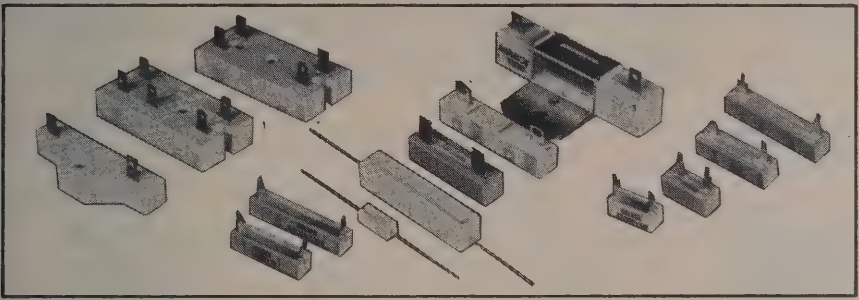
COLBER RESISTORS

WIRE WOUND / TEMPERATURE SENSITIVE / CERAMIC ENCAPSULATED / FUSISTORS (FUSEABLE RESISTORS)



The resistance elements of the Colber resistors are uniformly and tightly wound on glass fiber cores using premium quality wires. Tinned steel or brass terminals are secured to the element by automatic assembly equipment. The high degree of automation used in manufacturing this resistor allows you to use a high quality wire wound unit at a cost of approximately two cents.

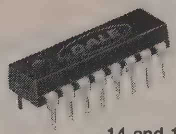
DUAL & SINGLE-IN-LINE PACKAGES
RESISTOR/CAPACITOR NETWORKS

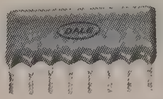
R/C Networks



14 and 16 Pin
Molded DIP styles

FEATURES

- Ideal where repetitive circuits are required.
- Wide range of R/C values for special applications.
- High density packaging for reduced assembly costs, improved performance and simplified board layout.
- Utilize same thick film circuit materials as those qualified to MIL-R-83401.
- Capacitors available to EIA RS 198 or MIL-C-55681.



4 thru 12 Pin
Coated SIP styles

DALE® THICK FILM CHIP RESISTORS

Series RCM and RCWM
Established Reliability
Military Qualification MIL-R-55342/2, /3, /4, /6

FEATURES

- Allows wide design flexibility for use with hybrid circuitry
- One-surface and wrap-around teminations
- Choices of sizes and power ratings
- Dale has complete capability to develop specific reliability programs designed to customer requirements
- Custom sizes can be designed for special applications

RCM and RCWM SPECIFICATIONS

ELECTRICAL

Resistance and Tolerance Range:
RCM/RCWM550: 10Ω to 500K, ±1%, 2%, 5% and 10%
10Ω to 500K, ±5% and 10%
RCM/RCWM575 and 5100:
10Ω to 1 Meg., ±1%, 2%, 5% and 10%
10Ω to 1 Meg., ±5% and 10%
RCM/RCWM5150 10Ω to 1 Meg., ±1%, 2%, 5% and 10%

Resistance Temperature Coefficient:
(−55°C to +125°C) "M" = ± 300 PPM/°C
"K" = ± 100 PPM/°C

Power Rating: Maximum at +70°C
RCM/RCWM550 = 50 MW
RCM/RCWM575 = 100 MW
RCM/RCWM5100 = 100 MW
RCM/RCWM5150 = 150 MW

RC and RCW SPECIFICATIONS

ELECTRICAL

Resistance Range:
RC/RCW550: 5Ω to 2 Meg.
RC/RCW575: 5Ω to 5 Meg.
RC/RCW5100: 10Ω to 10 Meg.
RC/RCW5150: 10Ω to 15 Meg.
RC/RCW1100: 5Ω to 5 Meg.
RC/RCW7225: 10Ω to 15 Meg.
RC/RCW2010: 10Ω to 15 Meg.
RC/RCW2512: 10Ω to 15 Meg.
RC/RCW1206: 10Ω to 10 Meg.

Resistance Tolerance: ±1%, ±2%, ±5%, ±10%, ±20%

Resistance Temperature Coefficient:
(−55°C to +125°C) ±200 PPM/°C

Power Rating (@ 70°C) and Maximum Operating Voltage:
RC/RCW550 = 100 MW, 50 VDC
RC/RCW575 = 150 MW, 70 VDC
RC/RCW5100 = 200 MW, 100 VDC
RC/RCW5150 = 350 MW, 125 VDC
RC/RCW1100 = 400 MW, 100 VDC
RC/RCW7225 = 600 MW, 200 VDC
RC/RCW2010 = 800 MW, 200 VDC
RC/RCW2512 = 1000 MW, 200 VDC
RC/RCW1206 = 250 MW, 100 VDC

Operating Temperature Range: −55°C to +125°C

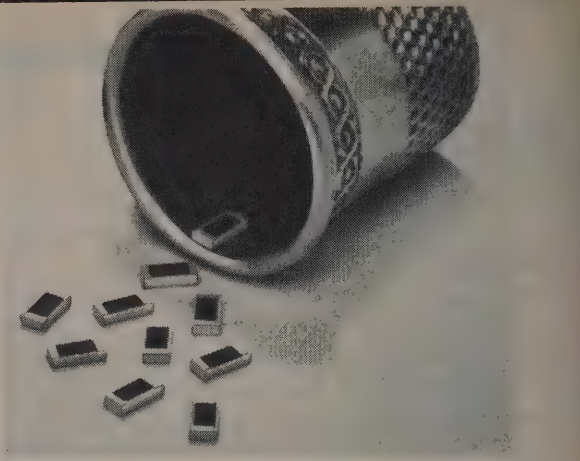
DALE®

COMMERCIAL
THICK FILM CHIP RESISTORS



DALE SERIES CRC

FEATURES

- Internationally standardized size
- Automatic placement compatibility
- Flow solderable • Thick film resistance element
- Wraparound termination • Inner electrode protection

ELECTRICAL SPECIFICATIONS

Resistance Range: 10Ω to 2.2 Meg. (±2%, ±5%)
20Ω to 300K (±1%)
Zero ohm jumper (0.05Ω Max., 2 amp Max.)

Standard Tolerance: ±1%, ±2%, ±5%

Power Rating: 1/8 Watt @ 70°C

Maximum Abient Temperature: 125°C

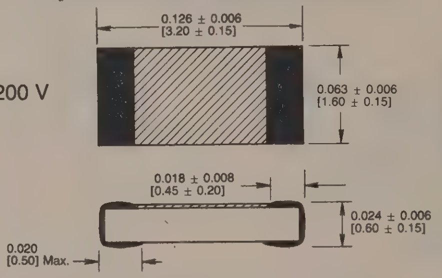
Rated Continuous Working Voltage: $\sqrt{0.125 \times R}$ or 200 V whichever is less (r = nominal resistance value)

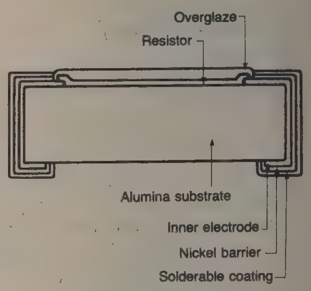
Temperature Range: −55°C to +125°C)

Temperature Coefficient: (−55°C to +125°C)
±1%, tolerance: ±100PPM/°C
±2%, ±5% tolerance: ±200PPM/°C

DIMENSIONAL SPECIFICATIONS:

[Numbers in brackets indicate millimeters]





HOW TO ORDER

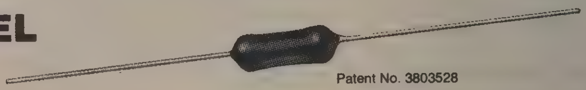
DALE®

ESTABLISHED RELIABILITY
HERMETICALLY SEALED METAL FILM RESISTORS

MIL-R-55182, TYPE RNR, S LEVEL
DALE TYPE SE



Patent No. 3803528

FEATURES

• Meets requirements of MIL-R-55182 • Verified Failure Rate • Very low noise • Controlled temperature coefficient of resistance • Excellent high frequency characteristics • Ceramic-to-metal sealed construction • Final protective coat of special epoxy provides a smooth, non-porous envelope • Leads are OFHC tinned copper • 100% stabilization and screening tests. Group A testing, if desired, to customer requirements • Traceability of materials and processing • Monthly acceptance testing • Dale has complete capability to develop specific reliability programs designed to customer requirements • Extensive stocking program at distributors and factory

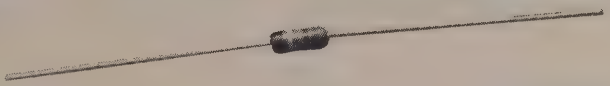
DALE®

DALE TYPE CCF-07 and CCF-55 METAL FILM RESISTORS

Coated, Commercial, 1%, 2% Tolerance

TAPE AND REEL PACKAGING



FEATURES

- 1/4 watt at 70°C power rating
- CCF-07 = 2% tolerance, CCF-55 = 1% tolerance
- 100 PPM/°C temperature coefficient
- Superior electrical performance. CCF-55 meets or exceeds MIL-R-22684 (RL07) and MIL-R-10509 (RN55D). CCF-07 meets electrical requirements of MIL-R-22684 (RL07)
- Flame retardant epoxy conformal coating
- Color band marking for ease of identification after mounting

SPECIFICATIONS

ELECTRICAL

Resistance Range: 10Ω to 1 Megohm

Resistance Tolerance: ±1% (CCF-55) ±2% (CCF-07)

Resistance Temperature Coefficient: ±100 PPM/°C (CCF-07 = −65°C to +150°C; CCF-55 = −65°C to +165°C)

Resistor Power Rating: 1/4 watt at +70°C

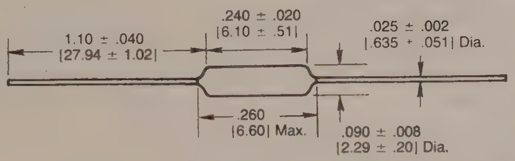
Maximum Working Voltage: 250 VRMS

Insulation Resistance: 10,000 Megohms

Operating Temperature Range: CCF-07 = −65°C to +150°C; CCF-55 = −65°C to +165°C

PHYSICAL CONFIGURATION

[Numbers in brackets indicate millimeters]



RESISTANCE VALUES

The **Dale CCF-07** is available in the standard 24 resistance values per decade. The **Dale CCF-55** is available in the standard 96 resistance values per decade. Values are obtained from the appropriate decade table by multiplying by powers of 10. Example: 24 = 24 ohms, 240 ohms, 2.4K, 24K or 240K.

CCF-07

10	22	47
11	24	51
12	27	56
13	30	62
15	33	68
16	36	75

HOW TO ORDER

CCF-07 CCF-55	241 3010	G F
MODEL NUMBER	RESISTANCE VALUE	TOLERANCE
	First two digits are significant for CCF-07; first three digits for CCF-55. Last digit specifies the number of zeros.	**F** = ±1% **G** = ±2%

EXAMPLE: **CCF-07 241G** = A 1/4 watt metal film resistor with ±100 PPM/°C T.C., resistance of 240 ohms and tolerance of ±2%.

CCF-55 3010F = A 1/4 watt metal film resistor with ±100 PPM/°C T.C., resistance of 301 ohms and tolerance of ±1%.

DALE®

DALE TYPE PTF COATED PRECISION THIN FILM

Low T.C.—Tight Tolerance

FEATURES

- Performance exceeds MIL-R-55182 requirements
- Extremely low temperature coefficients of resistance
- Very low noise and voltage coefficient
- Wide precision resistance range in small package
- 100% laser spiralled
- Very good high frequency characteristics
- Proprietary epoxy coating provides superior moisture protection
- Acceptance testing available
- Can replace wirewound bobbins

MATERIAL

Element: Precision deposited nickel-chrome alloy with controlled annealing

Core: Fire-cleaned high purity ceramic

Encapsulant: Specially formulated epoxy compounds. Coated construction.

Termination: Standard lead material is solder-coated copper. Solderable and weldable per MIL-STD-1276, Type C.

STANDARD ELECTRICAL SPECIFICATIONS

DALE TYPE	85°C RATING	MAX. WT. (Grams)	MAX. WORKING VOLTAGE	RESISTANCE RANGE
PTF 51	1/20 W	.11	200	50 Ω to 100K
PTF 56	1/8 W	.35	300	50 Ω to 499K
PTF 65	1/4 W	.75	500	50 Ω to 1 Meg.

Standard tolerances from 1% to .01%.

PHYSICAL CONFIGURATIONS

TYPE	DIM. A	DIM. B.	DIM. C (MAX.)	DIM. D

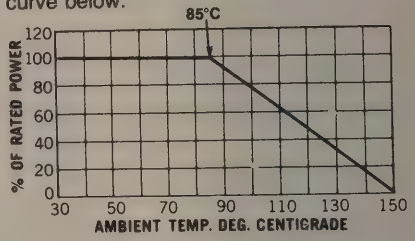
DERATING

Dale PTF resistors have an operating temperature range of −55°C to +150°C. They must be derated according to the curve below.



MATCHED SETS — NETWORKS

Dale's many years of experience in matching resistors for sets and networks, combined with the superb performance of the PTF product, provide the best and most economical solution to your precision resistor requirements. Why? Because most applications for precision resistors depend on two or more discretes having an initial tolerance ratio and a resistance tracking capability over temperature rather than each discrete resistor meeting the absolute requirements of the application.

Cost savings approaching 50% can be realized when relatively tight matching requirements are specified while permitting the absolute parameters of the discrete resistors to have more relaxed specifications.

Dale application engineers are available to assist you in specifying your requirements in the most economical way possible.

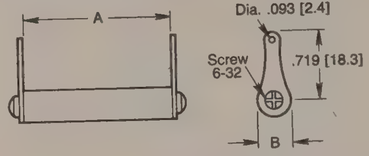
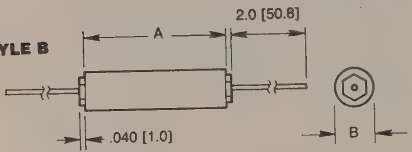
B, E, F, H SERIES*

STYLE A



STYLE B



FEATURES

- Single units to 10W, 40KV, ±3%
- Matched pairs (BP) to 20W, 80KV, ±1%
- Radial lug or axial lead
- Supplied with mylar protective sleeve .002″ [.05] thick
- Series B is general purpose. Also available encapsulated (Series E); non-inductive, varnish coated (Series F); high megohm, varnish coated (Series H).

Style B axial leads are #20 AWG tinned copper. Dimensional tolerances are ±.016″ [.4] or ±1%, whichever is greater.

GENERAL PURPOSE TYPES (±3%, ±5%, ±10%, ±15%)

DALE®

INDUSTRIAL POWER WIREWOUND RESISTORS

DALE TYPE HL, TUBULAR

For inexpensively dissipating larger amounts of power in DC or low frequency AC circuits.

Applications include:

- Grid resistor
- Voltage dropping resistor
- High voltage bleeder resistors in power supplies
- Bias supply resistor
- Voltage divider networks
- Filament dropping resistor
- Load resistor
- Shunt resistor

*Maximum working voltage determined at .0008" diameter wire resistance values.

Tolerance: Standard tolerance is ±5% 1 ohm and above, ±10% below 1 ohm, ±3% available.

Temperature Coefficient: ±90 PPM/°C below 1Ω; ±50 PPM/°C 1Ω to 9.9Ω; ±30 PPM/°C 10Ω and above.

Lead Material: Standard material is tinned copperweld

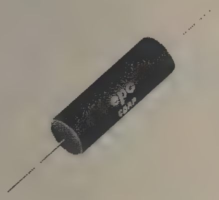
EPC DEVICES — *DESCRIPTION* — Mil Equiv. — *CONDENSED SPECIFICATIONS*

TYPE CA



Encapsulated precision wire-wound resistors offering exceptional resistance stability, T.C. 5 ppm std. and low thermal EMF's. Designed to meet MIL-R-93/MIL-R-39005. Group encapsulization, Radial-lug four terminal and special physical configurations available.

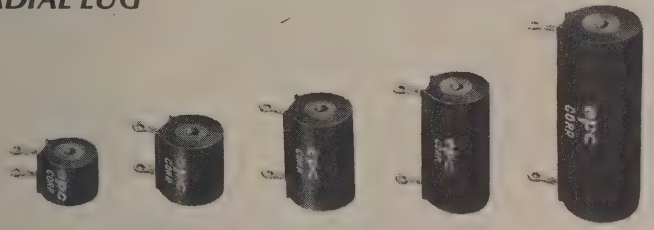
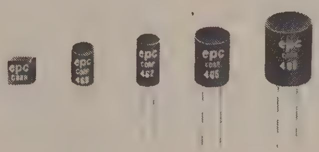
Power: .02 to 2.5W
Range: 1Ω to 20MΩ depending on size
Tolerance: .005%, .01%, .025%, .05%, .1% and 1%
Temp. Coef.: 5 PPM/°C std. on values over 100Ω
Stability: ±35ppm/YR

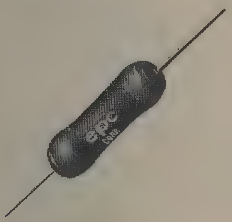
RADIAL LUG



PRINTED CIRCUIT



TYPE SP



Silicone coated precision wire-wound power resistors, offering exceptional stability and performance under severe environmental conditions of MIL-R-26/MIL-R-39007. Also available utilizing Beryllium oxide cores. For greater power-size ratio and stability.

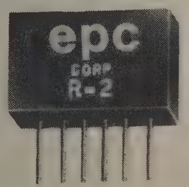
Power: .25W to 12.5W
Range: .1Ω to 275KΩ depending on size
Tolerance: 1% is std. Available to .01%
Temp. Coef.: 20 PPM/°C. Slightly higher for lower values. Special T.C.'s available

NETWORKS



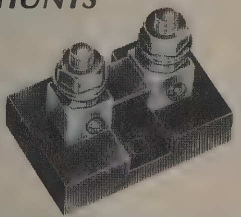
RC NETWORKS OUR SPECIALITY

Resistor networks to customer specification utilizing ultra precision wire-wound, metal film, carbon film, or wire-wound power resistors. All networks assembled on printed circuit boards.

FAST DELIVERY ON PROTOTYPE AND LARGE ORDERS

Power: .1W to 10W
Range: .1Ω to 5MΩ
Nominal Resistance Tolerance: To ±.005% D.C. W-W
Resistance Ratio Tolerance: To .001% D.C. W-W
Long Term Stability: .001%
Response Time: 100MS

LIGHTWEIGHT SHUNTS



Standard D.C. current shunts from .001Ω to 1Ω. Accuracy ±.25%, available to .01%. Also external portable and switchboard shunts for use with D.C. Ammeters. 1 to 200 amp. with a 50MV or 100MV drop. Accuracy ±1%.

SPECIAL OEM CURRENT SHUNT RANGING FOR PANEL METERS

*When bonded to substrate, value dependent. **Center-tapped.

New Surface Mounted Resistor Networks

RATIO TOLERANCES TO 0.01%
ANY COMBINATION OF RESISTOR VALUES FROM 20Ω TO 250 KΩ

HERMETIC CHIP CARRIERS — standard JEDEC hermetic chip carries to full MIL STD 883B specifications. Available with from 16 to 64 terminals.

ECONO-CHIP* — Low-cost replacements, in non-military applications, for hermetic chip-carrier networks. Bonding pad locations are equivalent to configurations of standard JEDEC cariers.

* Patent Pending.

FLIP CHIPS — solder bumped; coated, multi-resistor substrates for face down attachment. Suitable for reflow soldering assembly. Low cost and fast production in custom networks.

VERSA-CHIP — New low-cost, surface-mounted packaging design for precision resistor networks. Provides pin-for-pin equivalency with chip carriers, and versatility for many alternate configurations. Laser-trimmable by customer after mounting.

Microwave Components

METALIZED PLATES — metalized on 1, 2 or 6 sides; as fired or polished substrates, in house laser hole drilling and contouring, through hole metalization. Metalizations — see metalized ceramic substrates.

MICROWAVE ATTENUATOR CHIPS — (3rd Quarter) attenuation of 1, 2, 3, 4, 5, 6, 8, 10, 16, and 20 dB; frequency to 18 GHz.

Other New Products

R.C. NETWORKS — Precision RC Networks are now available in standard SIP and DIP packages.

SILICON CHIP RESISTORS — (3rd Quarter) Standard and center-tapped chip resistors to compliment EFI's alumina-substrate chip resistors, Ta or NiCr, passivated.

PRECISION WIREWOUND RESISTORS

For thirty years we have been deeply involved in the refinement and manufacture of precision wirewound resistors meeting the exacting requirements of military specifications such as MIL-R-93/MIL-R-39005 (RB & RBR styles).

Many form factors are available, including axial and PC mounting types, in resistance values and accuracies to fill most requirements. "Standard" values and accuracies in our more popular types are usually available from stock. Orders for extremely large quantities and non-standard values are put on-line for prompt delivery.

Type		Basic Resistance Range	Standard Accuracies	Stability	Tempco	Power△ Rating ±0.1%@ +85°C	Max. Voltage	Encapsulation	A Dia.	B Length	C Length of Wire	D† Wire Gauge

A PRIME TECHNOLOGY COMPANY

Today's New HyComp Delivers Advanced Thin-Film Products.

Precision, Standard and Custom
RESISTOR NETWORKS

FEATURES:

- Hundreds of standard networks or your unique design
- Your choice of package: **SIP, DIP, JEDEC, LCC** (surface mount device)
- Either industrial (−25° to +85°C) or military (−55° to +125°C) temperature range
- Screening to MIL R-83401D or 883C
- Outstanding tolerances:
  - — Ratio matching to .005%
  - — Ratio tracking to ±0.5 ppm/°C
  - — Absolute tolerance to 0.05%
  - — Absolute TCR to ±10 ppm/°C
- Proprietary Nichrome mix resulting in high stability over time and temperature
- Passivated, hermetically-sealed, low moisture

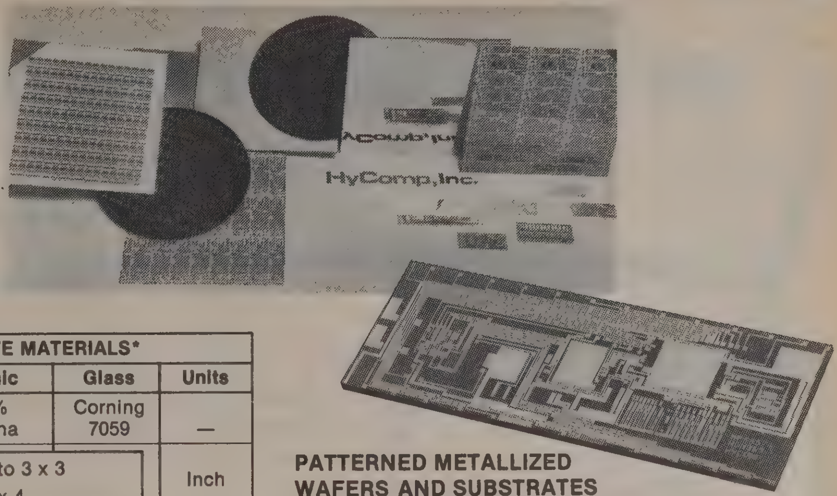
Metallized WAFERS & SUBSTRATES

With or without pattern



METALLIZED WAFERS

SUBSTRATE CHARACTERISTICS	SUBSTRATE MATERIALS* Silicon	Ceramic	Glass	Units
Formulation	100% Pure	99.6% Alumina	Corning 7059	—
Dimensions Length x Width	Standard: 2 x 2 to 3 x 3 Optional: To 4 x 4			Inch
Thickness	0.012	0.010-0.025	0.022	Inch
Finish (As-Fired)	NA	4-6, 2-3 opt.	NA	μinch
Surfaces Coated	1 or 2	1 or 2	1 or 2	—
DEPOSITIONS	**METALLIZATION**			
Resistance Layer Material Thickness	Nichrome (Vacuum-deposited on substrate) Typically 100-200Å			
Diffusion Barrier Material Thickness	Nickel (Vacuum-deposited on Nichrome) Typically 1000-3000Å			
Bonding Layer Material	High ductility 24K gold (Vacuum-deposited on Nickel)			
Thickness	Typically 1200Å; Electroplated to a minumum of 40 microinches, a maximum to customer specification			

* Sapphire and Berrylia substrates are available on request.

PATTERNED METALLIZED WAFERS AND SUBSTRATES

PATTERN PARAMETER	PARAMETER RANGE
MECHANICAL	
Lines and Spaces	Standard: Down to 1 mil Optional: Down to 0.25 mil
Form Factor	Wafers or individual substrates
Bonding Methods	HyComp's standard gold bonds are compatible with ultrasonic, thermocompression ball and wedge, and thermosonic bonding techniques.
ELECTRICAL	
Sheet Resistivity	50 to 300 Ohms per square
Absolute TCR	10 to 50ppm/°C
Levels of Fabrication	HyComp will attach active or passive devices on request.

PRECISION WIREWOUND RESISTORS

PRECISION RESISTORS FOR EVERY APPLICATION

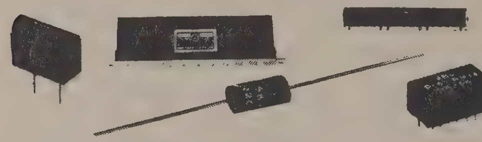
Precision Resistors for every application imaginable; high quality, low priced precision resistors are available for your every design need and at delivery schedules (1-2 weeks) even distributors can't beat!! JULIE RESEARCH resistors are guaranteed for a lifetime performance in almost every value, tolerance and stability.

Available as individual, ratio or network assemblies, these expertly manufactured and trimmed resistors assist you in eliminating countless hours of Production Test time from your design. In addition, the use of these very stable resistors contribute to reliable design and reduced component count. Specify a Julie Resistor. Better yet, call us and we will assist in helping you get the best price-performance unit your application and budget will allow.

JUST A FEW OF THE PROVEN APPLICATIONS FOR THESE LOW REACTANCE HIGH PERFORMANCE RESISTORS ARE:

- Transducer Calibrating Networks
- Current Metering
- Gyro Torquing
- AC and DC Precision Bridge Elements
- Amplifier Summing Elements
- D/A Converters
- Reference Divider
- Precision Multiplier
- Resistive Divider Networks
- Shunting
- AC or DC Ratio
- High Performance MIL Spec
- Zener Trimming Networks

RESISTOR STYLES



SPECIFICATIONS

The DIP resistor is available with up to 7 resistance values in a 14 pin DIP or 8 resistance values in a 16 pin DIP.

Range: 100Ω to 100 KΩ per resistor.

Ratio Accuracy: To .001% for ratio 1:1.

Stability: Network .002% for standard ranges.

Temperature Coefficient: 1 ppm/°C to 20 ppm/°C.

Delivery: 3-4 weeks.

Custom designs available — contact factory with your specific applications.

SPECIFICATIONS

Range: Individual Resistors, 0.1 ohm to 5 megohms. Ratio Sets, 1:1 to 10^6:1 depending on total resistance required.

Accuracy: Standard accuracy of resistors, 0.005% for values from 1000 ohms to 5 megohm. Standard accuracy of ratio sets, 0.0025% for ratios near 1:1. Accuracies from 0.002% to 0.1% are available (at corresponding prices) on special order.

Stability: Resistors, 0.002% per year for standard ranges.

Accuracy Over Military Temperature Range: ±0.02% from −45°C to +85°C.

Matching Over Military Temperature Range: ±0.005% from −45°C to +85°C.

Retrace Over Military Environmental Conditions: 0.002%.

Temperature Coefficient: Resistors, 5 ppm/°C standard. (Available as low as 1.0 ppm/°C). Ratio sets, 2.5 ppm/°C standard. (Available as low as 0.7 ppm/°C).

Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

Thermal Transients: All thermal-induced transient effects, e.g.: self-heating, Seebeck and Peltier effects, are less than 0.0015% at rated power dissipation. Self-heating and time constants of thermal transients are reduced to 10% of normal values in air.

Current Capability: To 2 amperes.

Voltage: Between Terminals, 300 volts maximum, Terminals to Case, 500 volts maximum.

SPECIFICATIONS

Range: Individual Resistors, 1 ohm to 10 megohms. Ratios, 1:1 to 10^6:1, depending on total resistance required.

Accuracy: Standard accuracy of resistors, 0.01%, for values from 100 ohms to 5 megohm. Standard accuracy of ratios, 0.005%, for ratios near 1:1. Intermediate accuracies of 0.05% and up and higher accuracies to .0025% are available on special order.

Stability: Resistors 0.003% per year for standard ranges.

Accuracy Over Military Temperature Range: 0.02% from −30°C to +85°C.

Retrace Over Military Environmental Conditions: 0.003%.

Temperature Coefficient: Resistors, 5 ppm/°C standard, (available as low as 1.0 ppm/°C). Ratios, 2.5 ppm/°C standard, (available as low as 0.7 ppm/°C).

Note: Temperature Coefficient can be altered, in manufacture, over over wide ranges.

SPECIFICATIONS

Range: Individual Resistors, 1 ohm to 100 ohms.

Accuracy: Standard accuracy of resistors, 0.01%, for values from 1.0 ohm to 100 ohms. (R_1xG) .005% (CH).

Stability: Resistors 0.003% per year for standard ranges.

Accuracy Over Military Temperature Range: 0.02% fom −30°C to +85°C.

Retrace Over Military Environmental Conditions: 0.003%.

Temperature Coefficient: Resistors, 5 ppm/°C standard, (available as low as 2.5 ppm/°C).

Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

Voltage and Power Ratings: See chart.

Construction: See charts.

Group Encapsulation: Special techniquies permit group encapsulation of high-accuracy units on a high-yield basis, enabling better accuracies at competitive costs. (See JRL Bulletin B-11.)

THICK AND THIN FILM ELECTRONIC COMPONENTS

DIP RESISTOR NETWORKS

MIL-R-83401

Thick film epoxy molded DIP resistor networks are available in both Commercial and M-83401 Mil-approved configurations. 14 and 16 Pin. A and B Schematics in standard resistance values are available from stock. Custom designed circuits for your unique requirements are a specialty.

WRITE FOR BULLETIN MD 2/80
WRITE FOR BULLETIN PD 1/80

THICK FILM CAPACITOR ARRAYS

Thick Film Capacitor Arrays offer considerable cost advantages and reliability improvements for multiple capacitor circuits. The standard capacitance range is 10 pf to 200 pf. These circuits are available in virtually any customer required configurations. The capacitor elements exhibit NPO - type characteristics. Tolerances to 5% and voltage rating to 200 volts are available. Capacitors on a substrate may be matched to 2.5% on request. Dissipation factor is typically 1% and insulation resistance is greater than 10^{11} ohms.

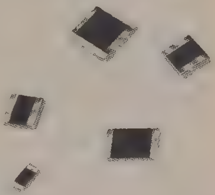
WRITE FOR BULLETIN CA 3/82

FLATSO

KDI Pyrofilm offers seven "FLATSO" resistors with voltage ratings to 20 KV and power ratings from .25 watts to 5 watts. Resistance values from 50Ω to 5,000 Meg and temperature coefficients to ±100 PPM/°C are available depending on value. Custom Flatso Networks and non-standard values will be quoted upon request.

WRITE FOR BULLETIN FL1-80

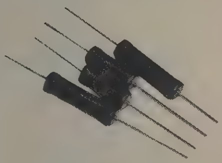
THICK FILM CHIP RESISTORS



A complete line of Thick Film Chip Resistors are available in eight sizes. These chips feature both single-sided and wrap-around terminations. They are available with platinum gold, gold, and solder coated terminations. The resistance range is from 5.1 ohms to 4 megohms. Tolerances from 1% to 20% are standard as are temperature coefficients from 100 PPM/°C to 250 PPM/°C. Power capabilities range from 50 mW to 0.5 Watts. These chip resistors offer high rel design and construction and environmental testing is available.

WRITE FOR BULLETIN PC 10/81

HIGH VOLTAGE



Axial lead thick film resistors for both high voltage and high resistance can be supplied in voltage ratings to 40 KV and resistance values to 1,000 Meg. Fired at over 900°C, these resistors are unmatched in performance with proven load life stability.

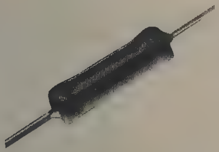
WRITE FOR BULLETIN PVC 2/80

HIGH VOLTAGE THICK FILM NETWORKS

Voltage dividers and other networks are available with ratings up to 60 KV. Divider Networks have tolerances to 1% with TC tracking to 25 PPM/°C. They can be manufactured with a resistance range from 10 ohm to 1,000 megohm. These networks are available in leaded and unleaded styles, in both standard and custom configurations.

WRITE FOR BULLETIN #FN 3/80

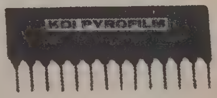
METAL FILM



Conformal coated high precision metal film resistors offer superior stability and reliability at a reasonable cost. Features include: small size, impervious to moisture, low noise, low T.C. and resistance range of 10 ohms to 70 Megohms. Surpasses MIL-R-10509 and MIL-R-55182. In-plant testing facilities as well as matched networks are available. Standard T.C.: ±10, ±25, ±50, and ±100 ppm/°C.

WRITE FOR BULLETIN #PME 2-80

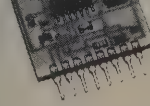
THICK FILM RESISTOR CAPACITOR NETWORKS



Custom Resistor and Resistor Capacitor Networks can be supplied to virtually any customer requirement. The resistance range is from 10 ohms to 10 megohms with absolute tolerances to 0.5%, and ratios to 0.1%. Temperature coefficient of 100 PPM/°C is available. The capacitance range is determined by the type of dielectric material chosen. RC Time Constant Calibration is available to 0.5%. Complete environmental testing can be performed.

WRITE FOR BULLETIN RC 2/82

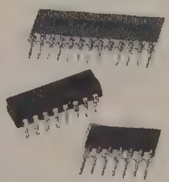
THICK FILM HYBRID CIRCUITS



Custom Thick Film Hybrid circuits are produced using any type of surface mountable semiconductor and chip component. Both Single-in-Line and Dual-in-Line styles are available and custom packaging formats can be accommodated also. Circuits can utilize any combination of semiconductors, capacitors, resistors and chip inductors. Full functional and parametric testing is available as well as any required environmental tests. All the features of Thick Film resistor networks, such as tight tolerances and ratio tracking, as well as low TC are inherent in hybrid circuits.

For additional information call factory

CHIPLESS™ RESISTOR/ CAPACITOR NETWORKS AND CAPACITOR ARRAYS



These standard and custom circuits are available in both Dual-in-Line and Single-in-Line formats and offer cost effective alternatives to discrete designs. These circuits and arrays utilize our Thick Film Capacitor technology and therefore require no "add on" chips. Capacitor elements are available with NPO or X7R characteristics. Values range up to several thousand picofarads with tolerances to 5% and matching to 2.5%. Resistor elements range from 10 ohms to 10 meg ohm with tolerance to 0.5%, TC to 100 ppm and matching to 0.1%.

KELVIN

Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

HIGH RELIABILITY "HRL" SERIES

Kelvin's "HRL" Series was generated after years of experience on the Polaris, Gemini, Apollo and other important high reliability missile and space programs. Kelvin has combined the many and varied parameters of these programs into a single resistor series, designed to meet the stringent high reliability requirements of many of today's military and commercial systems.

Kelvin's reliability goal, through the design and controls of the "HRL" Series resistor and the use of acceptance inspection procedures, was to produce precision wire-wound resistors having failure rates better than .0005%/1000 hours at a 90% confidence level. Present level is .00064%/1000 hours at a 60% confidence level.

All "HRL" resistors have a documented history. This includes traceability from the spool analysis of the resistance wire, through each phase of the production operation to the finished product. Each resistor is screened to eliminate INFANT MORTALITY. This consists of a 100 hour burn in at full rated power at 125°C and a short time overload at twice the rated power. Other tests are conducted as outlined in Bulletin HR 02449, which presents the complete procedure and methods approach for production of "HRL" resistors.

FAST RISE TIME APPLICATIONS

''RT'' style resistors provide exceptionally high frequency performance, in addition to the other recognized advantages of wire-wound resistors. ''RT'' resistors can be supplied with rise times as low as 100 nanoseconds (from 10% to 90% of peak pulse amplitude at 100 KC), depending on resistance values and physical configurations. See Catalog #763

TOLERANCES: 1% through .005% available on most types and resistance values.

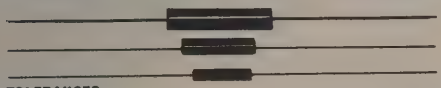
SERIES KM MOLDED, POWER RESISTORS



Series KM are general purpose, reliable power resistors designed to be used where heat sinks are not available or not desired. These resistors are extremely stable for their size as compared to film types. Series KM are considered to have the lowest dollar per watt cost of precision resistors. Send for Bulletin K-1.

TOLERANCES:

KM025, KM050, KM100—.1% thru 5%
KM200 thru KM1000—.05% thru 5%

TEMPERATURE COEFFICIENT:
(Per Degree Centigrade)

±20 PPM (170 ohms and above)
±30 PPM (10 to 170 ohms)
±50 PPM (1 to 9.99 ohms)
Below one ohm—contact factory

T.C.s to 5 PPM/°C available depending on size and value.

NON-INDUCTIVE STYLES: Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add ''N'' to part number. Example: KMN025.

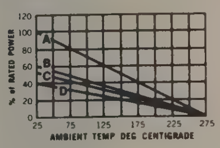
SERIES KC CHASSIS MOUNT POWER RESISTORS

DERATING CURVES

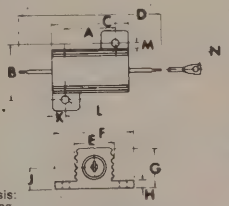
Derating is required for reduced chassis mounting area and high ambient temperatures.

Curves



A — When mounted on proper aluminum chassis:
48 sq. inches 0.040 aluminum for KC500 and KC1000
70 sq. inches 0.040 aluminum for KC2500
144 sq. inches 0.040 aluminum for KC5000

B — Unmounted KC500 and KC1000
C — Unmounted KC2500
D — Unmounted KC5000



Designed to provide maximum heat dissipation through heat sink and finned case configuration. Ideally suited where large amounts of power must be dissipated and small size is important. Capable of maintaining their precision tolerance in wattage ratings up to 50 watts. Send for Bulletin K-3.

TOLERANCES: 0.05% through 5.0%.

TEMPERATURE COEFFICIENT:
(Per Degree Centigrade)

SERIES KM-4T & KC-4T POWER RESISTORS

KELVIN FOUR TERMINAL POWER RESISTORS provide low resistance and close tolerance capabilities to users who require accurate measurements in tightly designed circuits. The two voltage (sense) leads will yield a very precise measurement at the points where they join the current leads. Lead resistance, which plays a predominant role in low ohm resistors, is virtually eliminated.

GENERAL FEATURES

TOLERANCES:	1% through 10%
RESISTANCE RANGE:	.001 ohms and up
TEMPERATURE COEFFICIENT:	.1Ω to 1Ω ±90 PPM/°C .05Ω to <.1Ω ± 150 PPM/°C Below .05 ohm—Check Factory
TEMPERATURE RANGE:	−55°C to +275°C
DIELECTRIC STRENGTH:	1000 VRMS all styles except KC5000-4T at 2500 VRMS
LEADS:	Tinned copperweld

See KM & KC Series this page for additional specifications.

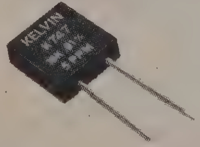
K747 WIREWOUND RESISTOR

Lead Size:	#22 (.025) solder-coated brass
Lead Spacing ℄ to ℄:	.150" (±.010)
Wattage:	.3 watts
Voltage:	200 volts
Resistance Range:	.5Ω to 400K
Resistance Tolerance:	1% thru .005%
Temperature Coefficient:	±5 PPM standard (0–85"C)
TC Tracking:	±3PPM/°C Typical—Available to ±1PPM/°C (Value dependent)
Stability:	25PPM/year
Rise Time:	25 nanoseconds (value dependent)
Noise:	Not measureable on commercially available equipment
Environmental:	Exceeds all requirements of MIL-R-39005

Designed specifically to interchange with film resistors of same physical configuration. Performance characteristics show the K747 series to be superior in almost all instances. Send for Bulletin K747.

For closer tolerances to .005% and temperature coefficients to 1 PPM (0 to 60°C referenced to 25°C), request Bulletin K746.



SIZE: 320±.020 H,
.295±.010 L,
.100±.015 W.
Or .100±.010W (specify K746)

Kelvin pioneered the close tolerance, close temperature coefficient and excellent long term stability wire-wound resistor. State-of-the-art manufacturing techniques and superior testing capabilities yield the ultimate in quality at a competitive price. Please contact your nearest Kelvin representative or the factory direct for further details.

KELVIN 5919 NOBLE AVENUE, VAN NUYS, CALIFORNIA 91411 (818) 782-6662, TELEX: 651417

KELVIN

Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

Series G HERMETICALLY SEALED RESISTORS

DESCRIPTION

- The Kelvin "G" Series are true hermetically sealed resistors where the resistive element is contained in its own stable environment within an insulated, non-magnetic metal shell with Kovar glass-to-metal end seals.
- By providing a true hermetic seal, plus closely controlled production techniques, guaranteed shelf life stabilities of less than 5 PPM per year are now made commercially available. Stability plots conducted over an extended period show deviations of less than 5PPM after the first year and 10PPM over a three year period.
- In order to achieve these high accuracies of stability, special handling in a controlled environment and attention to finite Engineering, Production and Quality details is a prerequisite.
- Kelvin has developed special winding techniques wherein repeatability of winding tension from lot to lot is controllable within a finite degree. This repeatability of tension results in consistency of stability and temperature coefficient. For example: TC's of 1PPM are available (value dependent) from 0°C to 85°C referenced to 25°C.

ELECTRICAL SPECIFICATIONS: "G" SERIES

1. Resistance Range:	See Table 1
2. Standard Resistance Tolerances:	0.1% to .0025%*
3. Resistance Ratios:	To .001%*
4. Temperature Coefficient:	±5PPM/°C from −55°C to +125°C Available to ±1PPM* 0 to 85°C TC's referenced to 25°C
5. Stability: (Storage Life)	5PPM/Year 10PPM/3 Years
6. Environmental:	Conforms to MIL-R-39005
7. Wattage:	See Table 1
8. Maximum Voltage:	See Table 1
9. Mechanical Dimensions:	See Table 1
10. Leads:	Solderable, 1½ inch minimum length. See Table 1

*Value Dependent

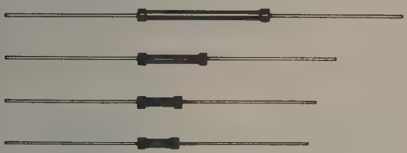
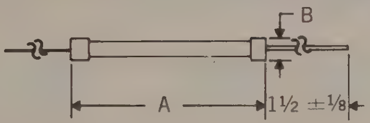
• DIODE ARRAY

SERIES I RESISTORS
PRECISION HIGH OHMAGE HIGH VOLTAGE RESISTORS



FEATURES
- Tinned copper leads .020″ or .032″ standard. Other lead materials available
- Conformal epoxy coated
- Glass overglaze for vacuum applications



NOTES
- Voltage coefficient is dependent on resistance value. Typically less than 5 PPM/V in mid resistance values
- Burn in and other preconditioning options available
- Tolerance to ½% on request

FEATURES
- Tolerances: 1%, 2%, 5%, 10%, 15%
- Conformal epoxy coated
- .032 tinned copper leads or nickel ribbon leads for welding
- Available without leads with solderable termination pads
- VCR less than 5 PPM/V
- Voltage dividers and networks designed to your specifications resistor ratios to 10,000:1 (size dependent).
- TCR tracking 25 PPM/°C
- Ratios to 1%

TEMPERATURE COEFFICIENT —

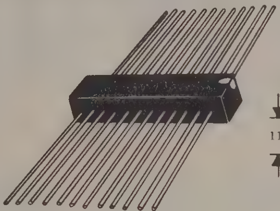
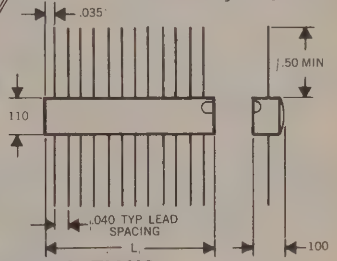
MINIATURE HIGH VOLTAGE DIODE ARRAY

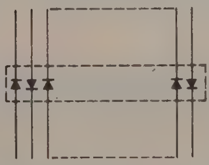
FEATURES
- Low reverse leakage current
- Fast recovery
- Small sizes





MECHANICAL
- Lead Diameter .015 max
- Lead Material—Silver
- Encapsulant—Epoxy

APPLICATIONS
- Typical applications are power supplies which generate the high voltage required for image intensifiers photo-multipliers and CRTS.



SPECIFICATIONS:

K & M Part No.	No. of Diodes	DIM L
107-031-12	12	.510

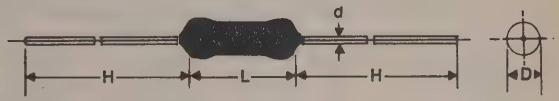
HIGH STABILITY LINEAR POSITIVE T.C. RESISTORS
Type LPTC-8 Metal Film



Max. Power Rating @ 70°C	L ±.020	D ±.020	1	d
⅛W	.250	.090	1.0	22 ga.

Resistance Range: 10 ohm — 20K ohm (T1 and T2)
10 ohm — 1K ohm (T3 and T4)
Resistance Tolerance: ±2% (G) and ±5% (J)
Resistance Temperature Coefficient: T1 (±2500 PPM)
T2 (±3000 PPM)
T3 (±3500 PPM)
T4 (±4000 PPM)

Features: a) Linear resistance change vs. temperature, which cannot be obtained in a semiconductor or thermister.
b) Positive temperature coefficient

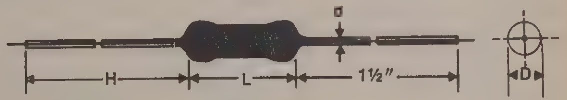
Application: Temperature compensation, temperature indication, temperature control, temperature protection and liquid level detection.

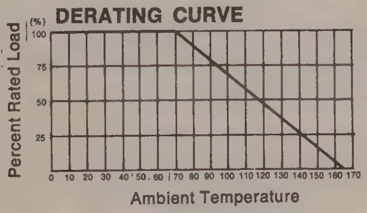
Markings: First two bands are significant digits, third band the multiplier, and the fourth and fifth bands are first two digits of T.C.R.

SPECIFICATIONS FOR MG SERIES METAL GLAZE RESISTORS

This high resistance component has been developed to be used as a precision or power resistor for X-ray equipment, measuring equipment and statistic electric equipment. It has high reliability in its shelf life, T.C.R. and other characteristics.

CHARACTERISTICS:
T.C.R.: 100 PPM
Load life: 3000 Hrs. ±1%
Anti moisture load life: ±1% after 250 Hrs. at 40°C 90-95% RH
Voltage coefficient: 0.00002 — 0.0005% /V
Shelf life: ±1% after 10,000 Hrs. at room temp.
Max. Temperature: 220°C
Temperature range: −55°C — +165°C





DERATING CURVE

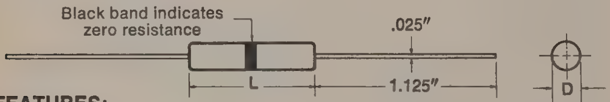
Insulation Resistance		over 10^4 MΩ	5.6	4 6 8
Non-Combustibility		The resistor shall withstand Overload test in accordance with Article UL492, 213 without producing a fire hazard.		
Resistance to Solvents		The resistor shall withstand Solvents test in accordance with Article MIL-STD-202 E 215 without producing any mechanical or electrical damage.		

JUMPER WIRE ZERO OHM RESISTORS

Type 104, 106, 108



FEATURES:

- Sizes equal to ⅛, ¼ and ½W carbon film
- Economical
- Straight-through zero ohm continuity
- Conformal multilayer epoxy coating
- Welded cap and lead construction
- Packing: Tape & reeled or bulk

Type	Equivalent Wattage	Body	
		inch Length (L) ±.010	inch Diameter (D) +.005
104	⅛	.150	.080
106	¼	.245	.085
108	½	.500	.095

SPECIFICATIONS:

Maximum Resistance: 0.0025 ohm
Lead Material: Leads are copperclad steel with 30/70 solder coatings to allow both welding and soldering operations.
Body material: Epoxy coated metal body
Minimum Insulation Resistance: Dry, 10,000 megohm; Wet, 100 megohm
Minimum Dielectric Withstanding Voltage: Atmospheric, 500V RMS; Reduced, 325V RMS
Insulation Flammability: Resistor insulation is self extinguishing within 10 seconds after externally applied flame is removed.
Current Rating: 25 amps at 25°C, derating to 0 amps at 150°C
Reel Capacity: 5000 pcs

APPLICATIONS

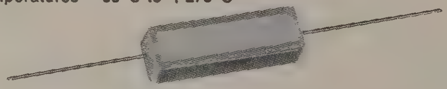
Jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a PC board.
Generally they are used for the following reasons:

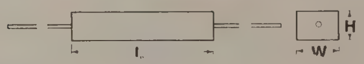
- Inability to connect two points on a PC board due to other circuit paths which must be crossed over.
- An after-the-fact design change that requires new point connections.
- Circuit tuning by changing point connections.

BATHTUB TYPE RESISTORS

CW SERIES

√ Economical
√ 1 watt to 50 watt
√ 5 & 10% Tolerances
√ Fireproof
√ Operating temperatures −55°C to +275°C





CONSTRUCTION

Premium grade resistance wire is wound on a woven fiberglass core. Tinned copper terminals are tightly crimped or welded (depending on resistance value) to the banded core. The wound unit is potted in a high quality Steatite Ceramic case using a high temperature, high thermal conducting inorganic potting compound. This results in a completely fireproof inorganic package, highly resistant to solvents and impervious to moisture.

Stand off or feet type available in sizes 3 Watt and larger. Specify by inserting letter "F" after type number. Example: CW5F

- Temperature coefficients (Typical) Below 1Ω 0 ±800 ppm; Over 1Ω 0 ±400 ppm
- Applicable specification to EIA Standard RS-344 Type
- Fuse type available
- Terminal strength: 5 lbs minimum
- Non-Inductive types available

QUALITY PRECISION RESISTORS

THICK FILM RESISTOR NETWORKS

Single-In-Line SIP Resistors

INTRODUCTION

These conformal coated single-in-line (SIP) resistor networks are designed to meet a variety of application requirements in a compact, highly reliable package.

All SIP networks are quality tested for both resistance and tolerance before shipping.

Applications for resistor networks include: pull up and pull down resistors, TTL & ECL line terminating resistors, LED current limiting resistors and telecommunication networks.

FEATURES

- Substrate Material — 96% alumina provides superior thermal properties and cooler operation.
- Resistors and Conductors — thick film materials with proven reliable performance.
- Lead Pull Strength: 5 lbs.
- Lead Material: Tinned plated copper alloy.
- Provides high electrical conductivity and thermal transfer.
- Encapsulation: Conformal coating ensure reliable performance.

PERFORMANCE SPECIFICATIONS

Temperature Coefficient:	±250 PPM Std., ±100 PPM avail.
TCR Tracking:	50 PPM Max.
Operating Temperature:	−55°C to +125°C
Max. Working Voltage:	200V
Thermal Shock:	±.5% Max.
Moisture Resistance:	±.5% Max.
Terminal Strength:	±.25% Max.
Resis. to Soldering Heat:	±1.0% Max.
Load Life (1000 hours):	±3.0% Max.
Temperature Cycling:	±1.0% Max.
Shock and Vibration:	±.25% Max.
Solvent Resistance:	Resists industrial cleaning agents per MIL-STD-202E
Lead Solderability:	Meets MIL-STD-202 Method 208

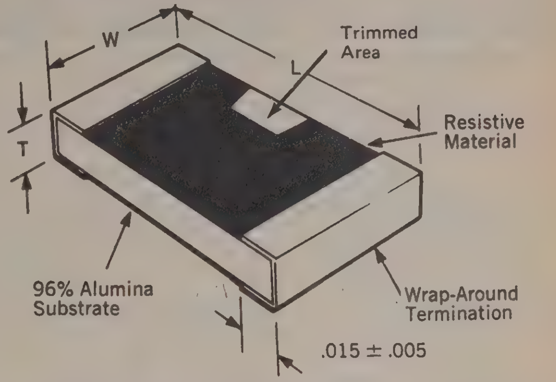
CHIP RESISTORS (THICK FILM)

FEATURES

- Eliminates expensive multiple screenings
- Provides very low to very hgh resistance values (trimmed to your specific order)
- Wrap-around terminations provide assembly ease and reliability
- Allows high density packaging
- Offers uniform tolerances — to .1%
- Can be wave-soldered directly to the back of a P.C. board
- Can be color-coded for identification
- High reliability-manufactured to meet MIL-R-55342C standards (see chart)
- High purity alumina substrate
- Precision performance-resulting from tight TCR, close tracking and excellent environmental performance
- Backside metalization available on request.

TOP-ONLY TERMINATIONS
(on request)

WRAP-AROUND TERMINATIONS



- Technical information and samples available without obligation.
- Laser trimmed for better accuracy and stability.

- Wattages shown in parenthesis are Navy ratings per Mil-R-15109.

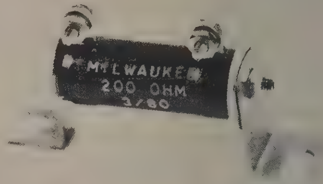
† Resistors shown are standard wattages

* Add "A" after part number for adjustable types.

† For resistance values outside the limits shown, consult M.R.C.

‡ Cement coating standard — Silicone available.

- Unable to find what you need above? The same cores can be wound with ribbon wire for higher wattage capability



M.R.C. can build a resistor to your specifications on any of the basic cores shown here. (If these do not suit your need, contact M.R.C. for engineering assistance, as 32 additional cores are also available.)

When contemplating a custom resistor, consider the following options to meet your exact requirement(s):

- **SPECIAL APPLICATIONS**
- **SIZE LIMITATIONS**
- **MIL–R–15109**

SPECIAL TOLERANCE–
- Resistance tolerance to ±1% can be manufactured in many cases.

SPECIAL COATINGS–
- Silicone
- Cement
- Sand & Cement

SPECIAL TAPS–
- Taps can be provided to your specifications.

SPECIAL T.C.–
- Temperature coefficient to 20 ppm/°C.

SPECIAL WINDINGS–
- Ayrton-Perry (Non-inductive, round wire only)
- Bilfilar (Non-inductive)

SPECIAL TERMINALS–
- Single and double ¼" quick-connect
- Metal sleeve ferrule
- Live-bracket

HARDWARE–
- Terminal hardware
- L–Bracket mounting
- Spring clip mounting
- Vertical mounting hardware

LOAD BANKS–
- M.R.C. will custom design and build load banks to your requirements.

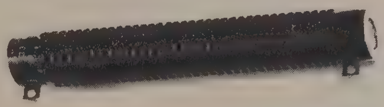
Vitreous Enamel Ribwound Resistors

APPLICATIONS

Particularly useful where high energy is to be dissipated in the lower ohmic ranges. Due to its ability to operate at higher temperatures and dissipate greater heat, the ribwound resistor is almost one-half the physical size of the equivalently rated round-wire style resistor. Ribwound wattage ratings are based on a temperature rise of 375°C above an ambient of 40°C. They may be mounted with spring clips (thru 1 1/8" dia.); thrubolt mounting hardware, individual or multiple-stacked bracket assemblies or live-bracket mountings.

BASIC CONSTRUCTION

Crimped ribbon resistance wire is edgewound and then locked to the ceramic core with vitreous enamel. Resistance wire is spot-welded to the terminal bands. Ribwound resistors can be furnished in fixed, adjustable, or tapped styles and are also available with cement coating.



OHMS	OHMS	OHMS
0.1	1.0	6.0
0.15	1.25	8.0
0.2	1.5	10.0
0.25	2.0	12.0
0.4	2.5	15.0
0.5	3.0	20.0
0.6	4.0	25.0
0.75	5.0	33.0

Many 300 watt units are stocked in both fixed and adjustable styles. Listed are the more popular 300 watt ohmic values. All other wattage ratings and styles are made to order.

HI–OHM RIBS

Exclusively from M.R.C.

You may note on the adjacent chart that maximum ohmic values shown for each wattage are three or more times that normally available.

This development is the result of the installation of precision rib winding machines designed and manufactured by M.R.C.

Unique in the industry, these precision machines produce a winding with extreme uniformity, as close inspection of M.R.C. ribwound resistors will reveal. The uniform winding allows turns to be applied much closer to each other and consequently significantly higher resistances are achieved.

This means that lower ohmic value round wire power resistors may feasibly be replaced by HI–OHM RIBS with a significant saving in size. (For a given wattage rating, ribwounds are considerably smaller physically.)

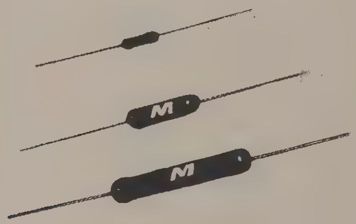
Axials



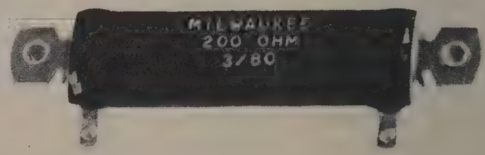
APPLICATIONS

- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

FEATURES

- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in close tolerances on request.
- Wattage ratings based on 325°C rise at 25°C ambient.
- Standard Sizes—3, 6.5, 11 watts.
- Leads Hot Tin Dipped.

Ovals



OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. COATINGS of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes; an original development of MILWAUKEE Resistor.

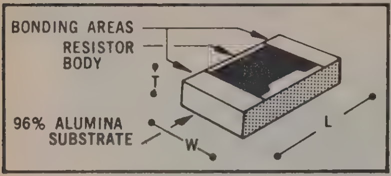
PRECISION THICK/THIN FILM CHIP RESISTORS

MINI-SYSTEMS, INC

20 David Road, P.O. Box 69, North Attleboro, MA 02761
TELEPHONE: (617) 695-0203 • TWX NO. 710-348-0564



MINI-SYSTEMS, INC., thick/thin film chip resistor components are ideally suited for the fabrication of microelectronic circuits where tight resistance tolerance, wide range of resistance values, or short production runs make the conventional screening and firing of thick/thin film resistance networks too costly. MINI-SYSTEMS, INC., chip resistors are made from a carefully engineered selection of materials. Geometries are mechanically precise and uniform. Careful testing and inspection result in the highest quality resistors.

STANDARD "MSR" SERIES

- Sizes Available: .035″ x .035″ up to .661″ x .494″.
- PDIS Rating (25°C free air): 40 mW to 15 W.
- Resistors manufactured with palladium silver or platinum gold.
- Tolerances available: ±.5%, 1%, 2%, 5%, 10%, and 20% for most resistance values.
- All types available in untinned versions for conductive epoxy attachment.
- Hi-Rel screening available on all resistor types.
- Backside metalization available upon request.
- "Flip-Chip" resistors are solder tinned (SN-62).
- Wire bond resistors have gold metalization optimized for wire bonding.
- Sandwich metalization standard on all wrap-around resistors.

***Wrap-Around Terminations**

WA-	Size (L x W)	PDIS Rating 25°C (Milliwatts)	Ohmic Range
10	.040 x .037	35	1Ω to 75MΩ
4	.057 x .052	250	1Ω to 100MΩ
13	.083 x .052	400	1Ω to 100MΩ
9	.110 x .052	500	1Ω to 100MΩ
7	.110 x .102	1000	1Ω to 100MΩ
24	.160 x .052	600	1Ω to 100MΩ

* Other standard sizes available.

ESTABLISHED RELIABILITY QPL MIL-R-55342 CHIP RESISTORS FOR ALL CRITICAL APPLICATIONS

- Sizes 55342/1 through /6
- Terminations Available: S, R, W, T, U
- Tolerances Available: F, G, J, K
- Meet or exceed Characteristic M
- Delivery: Typically 4 weeks ARO

NEW LOW COST "JR" SERIES COMPUTER/INDUSTRIAL GRADE WRAP AROUND CHIP RESISTOR

TYPE #JR13 — .075(L) x .050(W) x .017(T)

- Resistance Range: 10Ω to 10MΩ to standard EIA/MIL/IEC resistance decade values.
- PDIS Rating (25°C free air): 200 milliwatts.
- Untinned for either epoxy or solder attachment.
- Delivery typically 2 weeks ARO.

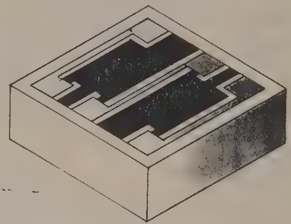
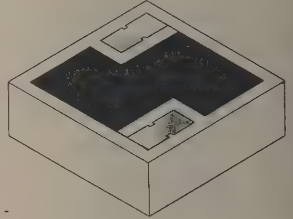
CUSTOM NETWORKS



MSTF-3 FORMAT A



MSTF-3 FORMAT B

- Nichrome or Tantalum Nitride
- Choice of Substrates:
  - a) Oxidized Silicon — .010″ ±.003″ Oxide Thickness — 10,000 Å min.
  - b) Ceramic, 99.6% — .010″ ±.001″
- Values range through the RETMA Series from 1Ω up to 10 megohm, depending on chip size.
- Tolerances: ±20%, 10%, 5%, 2%, 1%, 0.5% and 0.1% for most values.
- Backside gold available (3,000 Å typ.) on request.
- MSTF-3 series includes standard center tap dual resistor pattern.
- Visual requirements designed to meet MIL-STD-883 Method 2010.6 with full lot traceability of material and processing.
- Bond pad size: .005″ x .005″ minimum. Bond pad conductor material: Gold (20,000 Å typ.) standard. Bondable with normal wire bonding methods, such as thermocompression, thermosonic, or ultrasonic.
- Nichrome resistors passivated with silicon dioxide (5,000 Å typ.) for moisture protection and reliability. TCR (absolute) can be provided from 0-25 ppm. Special TCR's available on request.
- Noise: −30 to −35 dB typical for most values.
- Stability: 0.05% max. 0.02% typical. ± .003% typical Ratio. (After 1000 hours @ + 125°C.)
- Trimmable: Designed for later active trimming with Xenon or YAG Laser.
- Chip or Packaged

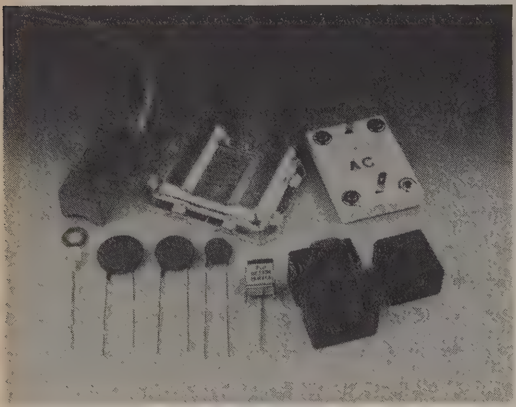
posistor® positive temperature coefficient resistors

muRata ERIE
MURATA ERIE NORTH AMERICA, INC.

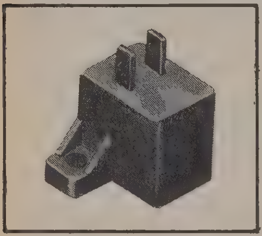


Murata Erie Posistors are basically positive temperature coefficient resistors with a very well defined resistance-temperature "knee" and the unique ability to "switch" relatively large amounts of power. They may also be used as self-regulating heating devices at useful power levels and as control devices for high power heaters. Applications include temperature sensing, over temperature and over current protection and motor starting to name a few.

Products utilizing Positors are extremely safe and reliable and offer all of the design, manufacturing, repair and sales advantages of solid state technology.

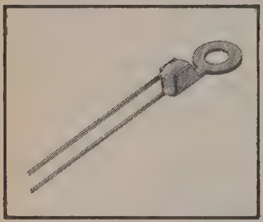
- Compact
- Reduced component count
- Extremely reliable
- "Stepless" temperature control
- Simple repair or replacement
- Long term reliability
- Shock and vibration immunity
- Nonflammable case and insulation available
- No electrical or acoustical noise
- No electrical contacts

FOR MOTOR STARTING



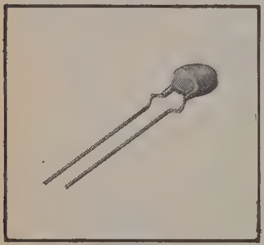
Provides a smooth, solid state electronic starting device for single phase motors utilizing a split-phase starting winding or for PSC motors as a direct replacement for starting capacitors and switches.

FOR SEMICONDUCTOR OVERLOAD PROTECTION



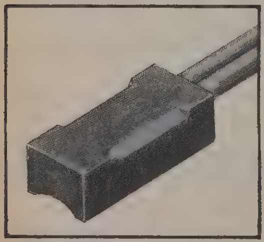
Senses the case temperature of high power semiconductors and appropriately reduces the power dissipation when dangerous power or current levels are reached by switching to a high resistance state and reducing base bias current.

FOR CIRCUIT PROTECTION



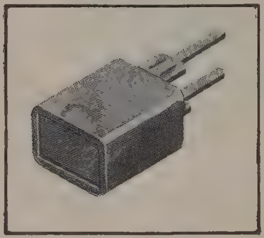
Provides overcurrent protection in a variety of applications. When connected in series with the protected device, Posistors limit the circuit current to a predetermined value — above that value they switch to a high resistance state and limit the current to a safe level.

FOR FREEZE PROTECTION



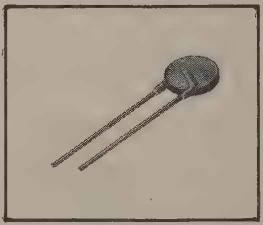
Designed for water filled pipe freeze-protection. Self-temperature regulating. As temperature decreases the Posistor power dissipation increases creating more heat that is conducted to the pipe (approximately 25 watts @ −20°C).

FOR DEGAUSING



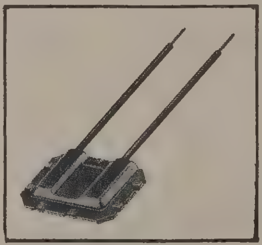
Used in series with CRT degausing coils, the Posistor functions as an automatic switch that goes to a high resistance state in a fixed time period after power is applied, effectively eliminating the current that flows through the degausing coil.

FOR TRANSFORMER PROTECTION



These devices are connected mechanically to the transformer core and electrically in series with the transformer primary. If core temperature exceeds temperature specs, the Posistor switches to a high resistance state and limits input current. It resets automatically when temperature returns to normal.

FOR HIGH POWER HEATING



Posistors for heating are self-temperature regulating with fast thermal response and power ratings to 170 watts.

PELLET HEATERS

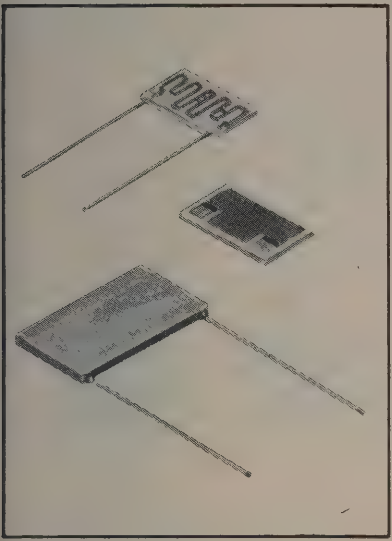
Basic Posistor elements are available in a variety of shapes and electrical characteristics to meet custom application requirements.

muRata ERIE

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

high voltage resistors

MURATA ERIE NORTH AMERICA, INC.



HV resistors

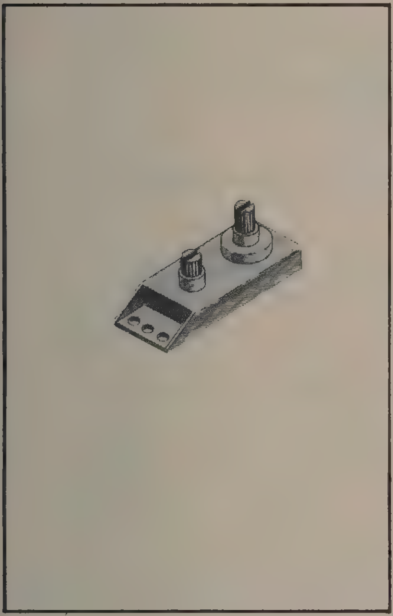
Murata Erie's line of high voltage resistors are designed to replace high voltage carbon film resistors and feature an extremely rigid alumina substrate with a deposited *thick film* resistance element for maximum electrical and mechanical stability.

Three models are offered — the *P Series* is for subassemblies that will be encapsulated in epoxy resin after assembly, the *D Series* which is supplied completely encapsulated and the *F Series* which is supplied encapsulated but without leads.

Murata Erie's application engineers are available to aid in the selection of exactly the right high voltage resistor to meet specific application requirements.

SPECIFICATIONS

Voltage Range	10 to 35 KV
Resistance Range	1 to 5000 Megohms
Power Rating	3 to 5 Watts at −70°C
Operating Temperature Range	−25°C to +130°C
Temperature Coefficient	±150 ppm/°C
Tolerance	±2% to ±20%



focus adjusting resistors

Murata Erie's focus adjusting resistors are designed to meet the stringent demands of high voltage CRT power supply applications. They are offered in a variety of configurations including those with integral capacitors and multiple taps such that most application requirements can be easily met.

TYPICAL CHARACTERISTICS

Item	Condition	Performance
Rated Power	Ambient Temperature: −20°C to +70°C	3W Max.
Temperature Coefficient	Ambient Temperature: −20°C to +120°C	±300 ppm/°C
Voltage Coefficient	Impressed Voltage: 1/10 Rated Voltage (to rated Voltage)	±3 ppm/Volt
Load Life	Ambient Temperature: 70°C; Impressed Voltage: Rated Voltage; Impressed Time: 1000 hours (90 minutes ON, 30 minutes OFF)	△R ≦ ±5% △N ≦ ±3%
Humidity Characteristics	Ambient Temperature: 40°C; Relative Humidity: 95%; Shelf Time: 1000 hours	△R ≦ ±5% △N ≦ ±3%
Thermal Shock Characteristics	1 cycle is −30°C (1 hour) to +130°C (1 hour) — Repeat 10 cycles	△R ≦ ±3% △N ≦ ±2%
Withstanding Voltage	Impressed Voltage: 1½ Rated Voltage; Impressed Time: 1 minute	△R ≦ ±3% No failure

△R denotes variation of resistance value. △N denotes variation of tapped resistance ratio.

Note: Higher and lower resistance values are available upon request.

II. GENERAL SPECIFICATIONS

A. ELECTRICAL CHARACTERISTICS

1. POWER
The power rating is the maximum power which can be applied to the resistor continuously at the specified ambient temperature.

2. RATED WORKING VOLTAGE
The rated working voltage is the maximum DC voltage or RMS value of AC voltage which can be applied to the resistor at the specified ambient temperature, and will be calculated by the following formula:

$$\text{RATED WORKING VOLTAGE} = \sqrt{\text{POWER RATING (W)} \times \text{NOM. RESISTANCE } (\Omega)}$$

However, the resistor can not be used over the specified MAXIMUM WORKING VOLTAGE.

3. MAXIMUM WORKING VOLTAGE
The maximum working voltage is the maximum limit of DC voltage or RMS value of AC voltage which can be applied to the resistor at the specified ambient temperature.

4. OVERLOAD VOLTAGE
The overload voltage is 2.5 times of rated working voltage which can be applied on the resistor in a period of 5 seconds at the specified ambient temperature. However, the resistor can not be used over the specified MAXIMUM OVERLOAD VOLTAGE even for a short period.

5. PULSE LOAD VOLTAGE
The pulse load voltage is the maximum pulse voltage specified in JIS C5202, 5.11 which can be applied on the resistor at the specified ambient temperature, and will be calculated by the following formula:

$$E_P = \text{POWER RATING (W)} \times \text{RESISTANCE } (\Omega) \frac{1}{t \times f} \quad \text{(t: time of pulse, f: test frequency)}$$

However, the resistor can not be used over the specified MAXIMUM PULSE VOLTAGE.

B. MECHANICAL CHARACTERISTICS

1. LEAD PULL TEST
The lead wire shall withstand steady pull of the following weight applied axially to the lead wire for the minimum period of 10 seconds without any breakage or damage:

Nom. Lead Diameter	0.4ϕmm	0.5ϕmm	0.6ϕmm	0.7ϕmm	0.8ϕmm & over
Steady Weight	1.0Kgs.	1.0Kgs.	1.5Kgs.	2.0Kgs.	2.5Kgs.

2. LEAD BEND TEST
The lead wire shall withstand minimum 4 bends of 90° rotation without any breakage or damage, when the resistor is placed in a vertical position and is applied with a weight of 0.5Kgs for 0.4—0.5ϕmm or 1.1Kgs for 0.6ϕmm and over lead wire.

3. SOLDERABILITY
The lead wire is immersed into 10% methanol or isopropyl alcohol of rosin by weight for a period of 2±0.5 seconds. Then, it shall be dipped into molten solder (60% Sn & 40% Pb) melted at 230±5°C for a period of 5±1 seconds approximately 1.5mm from the body of the resistor. A new adhering coating of solder shall cover minimum 95% of the surface being dipped into solder.

4. RESISTANCE TO CLEANING SOLVENTS
Color coating or marking shall remain legible after cleaning by solvents such as isopropyl alcohol, trichloroethylene, freon TF/TAC, xyliene etc., in form of liquid or gas.

TYPE 100S - 1900S RESISTORS

TYPE S RESISTOR ITEM DESCRIPTION

Sage Part Number identification consists of a combination of numerals and letters according to the following guide. This is the nomenclature ordinarily marked on resistors and it fully serves the purpose of purchased item description except for limited cases of special testing. Note that grouping of characters is not constant, but varies to fit descriptive need of a given part.

STYLE DESIGNATION

1500 **S NS** **B** **2740** **1**

Nominal Value, Ohms (decimal symbol, as required, is used in both nominal value and tolerance)

±% tolerance

If applicable

Core Material and Process Classification:
Blank entry indicates regular steatite core, commercial processing
A = alumina core, commercial processing **P** = alumina core, High Rel processing
B = beryllia core, commercial processing **M** = beryllia core, High Rel processing

S = single layer wound; **NS** = non-inductively wound

Body type, size, lead details per catalog chart

SAGE CLIPPER
2600 C

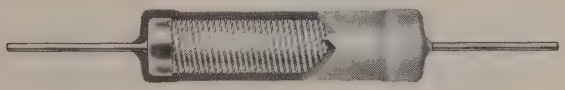
TYPE C

TYPE S

TYPE S CONSTRUCTION

Showing ceramic core, spaced single layer winding, welded to stainless steel cap, and multiple layer coating.

Copperweld leads 60/40 Hot Solder Dip. Lead Length 2″ ±1/16* is supplied on all sizes unless otherwise specified on purchase order.



*Except 250S and 500S Styles, which are 1½″ minimum.

TYPE C METAL SHEATHED RESISTORS

Similar in all respects to Type S, fully insulated plus addition of metal sleeve for heat sink mounting in spring clip holders.
Full heat sink rating.

OHMITE® Series 22 5% tolerance

conformal vitreous enamel axial lead wirewound resistors

OHMITE
20J10R

FEATURES

- **Rugged Vitreous Enamel Coating Withstands Severe Humidity and Temperature Cycling**
- **Economical**
- **All Welded Construction**
- **Ideal for Machine Insertion**

Advanced conformal vitreous enamel coating protects resistors, even in environments of high heat. These rugged, economical wirewound resistors are recommended for industrial applications where quality construction and reliable operation are prime specifying parameters.

The items listed in the chart are standard stock items. Other values and wattages are also available in accordance with the following applications.

SPECIFICATIONS

Tolerance: ±5% std. ±1% to ±10% available.

Temperature Coefficient:
0 ±30 ppm/°C 10 ohms and above
0 ±50 ppm/°C 1 to 9.99 ohms
0 ±90 ppm/°C below 1 ohm.

Dielectric Withstanding Voltage:
1000 VAC. (500 VAC for 1 watt type.)

Overload: 10X rated wattage for 5 sec. for 5 watt size and larger. 5X rated wattage for 5 sec. under 5 watt size.

Inductance: Standard units have single layer inductive winding. Low inductance windings available.

Core: Steatite ceramic.

Coating: Conformal vitreous enamel.

OHMITE® type 995 MOLDED axial lead vitreous enameled resistors

FEATURES

- **Unique Molded Construction Provides Consistent Shape & Size**
- **Exceeds MIL-R-26 Moisture Requirements**
- **Endures Heat Up to 1500 F**
- **All Welded Construction**
- **Ideal for Machine Insertion and High Density Circuits**

Series 99 molded vitreous wirewound resistors are high performance components designed for precision instrumentation, medical equipment and other applications demanding high reliability and stable operation. MIL-R-26 approved units are available for Military Application.

The items listed below are standard stock items. In addition items in accordance with the specifications shown are available on special order.

SPECIFICATIONS

Tolerance: ±5% std. ±.25% to ±10% available. 2 ohm minimum for tolerances closer than ±1%.

Temperature Coefficient: 0 ± 30 ppm/°C 10 ohms and above 0 ±100 ppm/°C 1 to 10 ohms 0 ±200 ppm/°C below 1 ohm.

Dielectric Withstanding Voltage: 1000 VAC. 500 VAC for 1 watt size.

Overload: 10X rated wattage for 5 sec. for 5 watt size and larger. 5X rated wattage for 5 sec. under 5 watt size.

Wattage Rating: May be increased by using metal mounting clips as a heat sink.

Inductance: Standard units have single layer inductive winding. Non-inductive (Aryton Perry or limited inductance) windings available.

Core: Steatite ceramic.

Coating: Molded vitreous enamel.

conformal silicone ceramic axial lead wirewound resistors

Series 44 Ohmicone® conformal silicone ceramic power resistors are designed for a wide range of commercial, industrial and communications equipment and systems. Resistors feature low, stable T.C.; all welded construction; and operation under high temperature conditions.

ELECTRICAL:

Tolerance: ±5%.

Temperature Coefficient: <1Ω — ±90 ppm/°C; 1 to 10Ω — 0 ±50 ppm/°C; 10Ω & greater — 0±20 ppm/°C.

Dielectric Withstanding Voltage: 1000 VAC for 3-5-10 Watt sizes, 500 VAC for 2 Watt and 250 VAC for 1 Watt size.

Overload, Short Time: 10X rated wattage for 5 seconds (5W and larger); 5X rated wattage for 5 seconds (3W and smaller).

Wattage: 1, 2, 3, 5, and 10 Watt sizes.

Inductance: Varies with no. of turns and wire size. Standard units have single layer winding.

Non-inductive (ARYTON-PERRY) windings available.

MATERIALS:

Core: Ceramic, resistant to thermal shock and wide variations in temperature.

Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance elements welded to metal end caps.

Coating: High performance conformal silicone ceramic.

Leads: Solder coated.

DERATING

Wattage is based on 25°C Free Air Rating. For high temperature operation, derate linearly from 100% @ +25°C to 0% @ 275°C.

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® Series 80 OHMICONE® 1% tolerance

MIL-R-26 Axial Lead Resistors

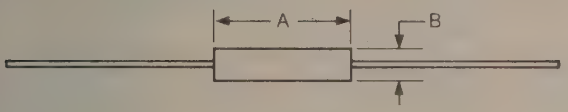
conformal OHMICONE® precision resistors

IN ACCORDANCE WITH RW70U — RW74U — RW78U — RW79U. SERIES 80 RESISTORS ARE DESIGNED FOR HIGH STABILITY, PRECISION POWER APPLICATIONS.

LOW TEMPERATURE COEFFICIENT, 20 PPM/°C FOR 10 OHMS AND ABOVE.

DIELECTRIC WITHSTANDING VOLTAGE 1000 VAC

1% TOLERANCE STANDARD, LOWER TOLERANCES AVAILABLE ON SPECIAL ORDER.



DIMENSIONS: Inches (mm)

SPECIFICATIONS

Tolerance: ± 1% std.

Temperature Coefficient:
±20 ppm/°C 10 ohms and above
±50 ppm/°C 1 to 9.99 ohms
±90 ppm/°C below 1 ohm

Dielectric Withstanding Voltage: 1000 VAC for 3-5-10 Watt sizes, 500 VAC for 1 Watt size.

Overload: 10X rated wattage for 5 sec. for 5 Watt size and larger. 5X rated wattage for 5 sec. under 5 Watt size.

Stability: Load life delta R of 0.5% for 2000 hours.

Inductance: Standard units have single layer inductive winding.

Core: Steatite ceramic.

Coating: Silicone ceramic.

DERATING

Wattage ratings are based on 25°C Free Air Rating. For higher ambient temperatures, use derating chart.

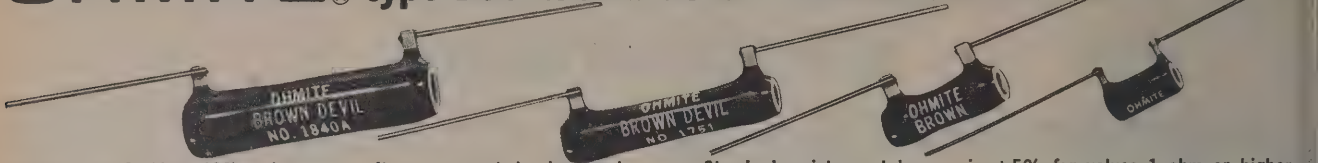
OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® type 200 *brown devil*® fixed resistors



BROWN DEVIL™ (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis toward miniaturization and the current industry trend toward high operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated 8 watts and the 10 watt size is now rated 12 watts. The 20 watt unit retains the same rating.

Available on special order in 3 watt size and in values other than those listed as standard. Also available on special order with radial leads for P-C board mounting.

Standard resistance tolerance is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, IL 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® type 270 vitreous enameled fixed resistors

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

Higher wattage resistors are available on a custom manufactured basis, for information, request copy of catalog 101.

These items are also available on special order, with non-inductive windings, (Aryton Perry).

The resistors listed below are standard stock items only. The 270 resistors are also available, on special order, in wattages from 3 through 1,000 with many intermediate values. Resistance values can also be supplied to meet your specific requirements. Contact our field representatives or our application engineers for assistance.

12 WATT Free air rating to 5600 Ohms Core: 1-3/4" x 5/16" Mtg. Ctr: 2 3/16" —Av. Wt. .02 lb. Std. Mtg. Brkt.: Cat. No. 5

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, IL 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® dividohm® type 210 adjustable vitreous enameled resistors

"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: The stated wattage rating applies only when the entire resistance is in the circuit. When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same proportion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is ±10% for the total resistance value.

The items listed in the chart below, are those items that have proven to be the most popular based on usage. "Dividohm" style resistors are available on special order in resistance values other than those shown and in a wattage range of 12 Watts through 1000 Watts. In addition to the vitreous enamel standard coating, these items are also available with an Ohmicone silicone ceramic coating.

For any variable or adjustable resistor requirement, contact your Ohmite field representative or our application engineers.

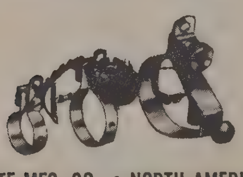
adjustable lugs

One "Screw Driver Type Adjustable Lug" is supplied with each unit. Lugs with a silver contact button can be ordered from the table below. MOVING THE LUGS: Lugs always should be loosened completely before moving and not moved except while the current is off, in order to protect the exposed wire from mechanical or electrical injury and to protect the operator from dangerous voltages.



DOUBLE THUMB SCREW ADJUSTABLE LUG

This adjustable lug, which is illustrated at left, features two advantages — ease of adjustment and less chance of damaging the resistance wire while moving lugs. Available for 1⅛" cores.

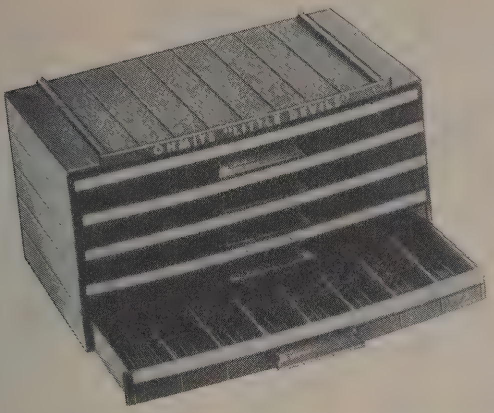
OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, IL 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® cabinet resistor assortments



Perfect for R & D and prototype labs.
All popular values included.
8 wattage sizes to choose from.
Contents clearly marked on front of each drawer segment.

Always have the right style, wattage, and resistance value on hand. Thwart Murphey's Law which states; "The resistance value needed will not be available."

Ohmite cabinet assortments come in four different resistor styles and 8 different wattages. The resistors used to make up these assortments are the most popular resistance values as determined by national usage.

The handy compact plastic cabinets are packed in accordance with the tables below, which state the quantities, number of values, and the resistance range of each assortment. Each drawer segment is individually labeled. Dovetail tops and bottoms of each cabinet facilitate stacking. Individual cabinet dimensions are: 9″ long by 4¾″ high by 5¼″ deep.

For specific information regarding any of the cabinet assortments, ask your Ohmite Distributor for the latest cabinet brochure.

100 picofarads to 11.111 microfarads in 100 picofarad steps with ±2% accuracy. Three binding posts, one to ground the metal case. Compact size. Big performance. Simple operation. Solves your troubleshooting, breadboarding and circuit design problems using simple sliding switches. Dimensions 4″ x 6″ x 1″.

Catalog No. 3430A

OHM-RANGER®

ECONOMICAL, PORTABLE RESISTANCE SELECTOR

- **Over 11 million ohms in one-ohm increments**
- **1% accuracy***
- **Easy slide switch operation**
- **Handy slimline size**
- **Rugged metal construction**

OHMITE
ohmranger

1 to 11,111,110 ohms, in one-ohm steps — with accuracy assured by half-watt 1% tolerance resistors! Has three binding posts, one to ground case. Small enough to take anywhere in your pocket, the handy easy-to-use OHM-RANGER is ideal for lab use, schools and service technicians. Dimensions 4″ x 6″ x 1″.

* 10 ohms and above

Catalog No. 3420

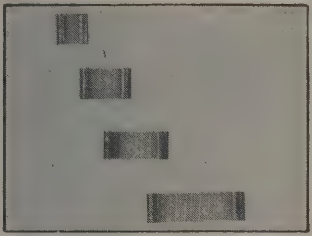
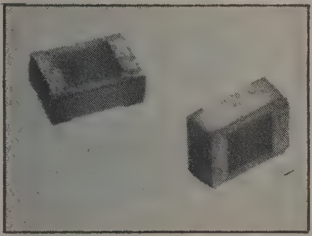
OHMTEK Chip Resistors

SOLDERABLE



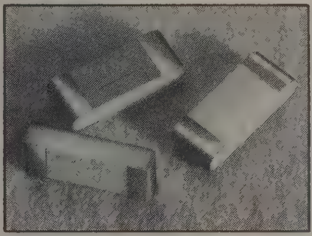
GENERAL PURPOSE

Cermet thick film wraparound terminations; resistance range 10 ohms – 100 megohms; tolerances 1, 2, 5, 10%; sizes (mils) 50x40, 50x50, 50x75, 50x100, 50x150, 100x100; solder coated with Ni barrier.



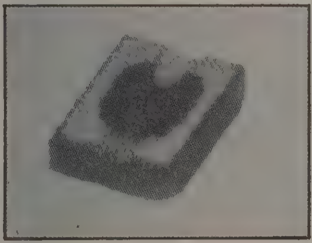
PRECISION THIN FILM WRAPAROUND

Resistance range 10 ohms – 200K; size 50x75 mils; tolerances .1, .5, 1, 2, 5%.



ULTRA-LOW VALUE

Resistance range .1 ohm – 10 ohms; tolerances 1, 2, 3, 5, 10%; size 60x160 mils; solder coated with Ni barrier.



FLIP CHIP

Cermet one-sided resistor for low cost reflow applications; sizes 50x50, 50x75, 50x100, 50x150 mils; resistance range 10 ohms – 100 megohms; tolerances 1, 2, 5, 10, 20%.

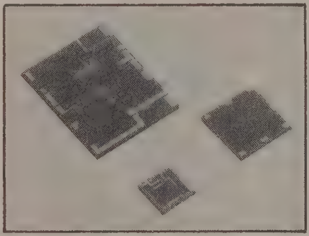
WIRE BONDABLE

THIN FILM ON SILICON

Sizes 30 mil² and 20 mil²; center tapped or single value; resistance range 4.7 ohms – 250k ohms; tolerances .1, .5, 1, 2, 5, 10%.

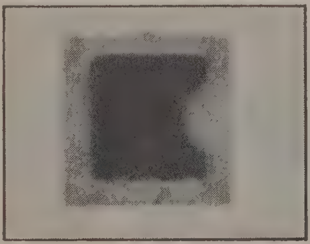
THIN FILM ON ALUMINA

Size 30 mil²; single value or center tapped for high frequency applications; resistance range 4.7 ohms – 500k ohms; tolerances .05, .1, .5, 1, 2, 5, 10%.



THIN FILM CUSTOM ARRAYS

Exceptional stability, tracking, and reliability; available in MIL-R-55342 characteristics; special chip array designs available on ceramic or silicon for active trimming.



TOPSIDE TERMINATION ON ALUMINA

Cermet thick film chip with Au wire bondable terminations; sizes 50x50 and 40x20 mils standard; resistance range 10 ohms – 5 megohms; tolerances 1, 2, 5, 10%.

Features:

- Standard chips for military and commercial applications.
- Custom chip arrays as required for demanding applications.
- Nichrome or Tantalum-based thin film.
- Ruthenium-based cermet thick film.
- Wide variety standard or versatile custom arrays.
- Rugged construction provides dependable performance and low cost.
- Chip network reliability greater than discrete resistor arrays.

Performance/Design Characteristics:

- Tolerances: .05%, .1%, .5%, 1%, 5%, 10%.
- Resistance values: .1 ohm to 100 megohms.
- Low TCR: 25 ppm/°C; 50 ppm/°C; 100 ppm/°C.
- Tracking less than 1 ppm (arrays).
- Operating temperature range: –55°C to +125°C.
- Low noise: –35db.
- Stability: ΔR less than 200 ppm/70°C/10,000 hrs.
- Full Mil-spec screening available in-house.

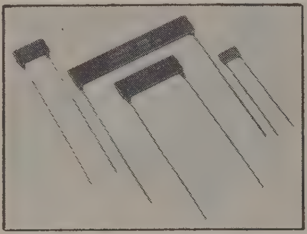
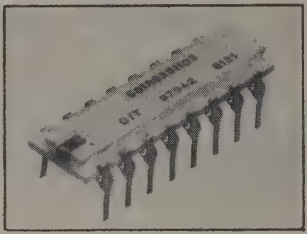
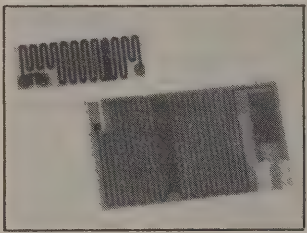
OHMTEK Cermet Resistors, Dividers and Networks



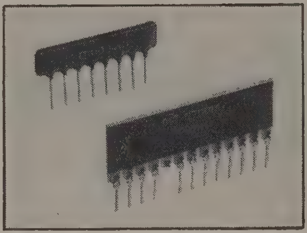
RADIAL LEAD RESISTORS
High voltage, low inductance applications; ¼, ½, 1, and 2 watt sizes; standard 10 ohms to 500 megohms 1%, 2%, 5%, 10% tolerances.



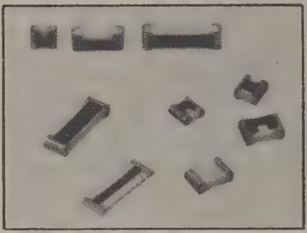
DUAL-IN-LINE
Resistor and R-C networks in standard DIL style "A" and "B" schematics; 100 ohms to 1 megohm; 1%, 5%, 10% tolerances. Testing to Group A of MIL-R-83401.



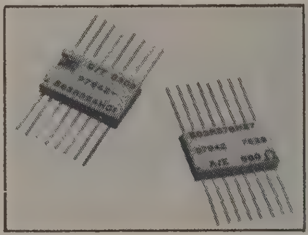
HIGH VOLTAGE DIVIDERS
Broad application to both military and commercial power supplies. Many standards to choose from, or custom made.



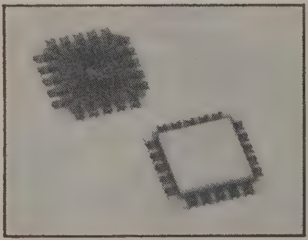
SINGLE-IN LINE CONFORMAL
Isolated resistors or common lead configurations. Low profile or high profile conserve P-C board space. Conformal epoxy coated or single-sided screened coatings.



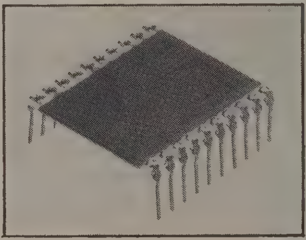
CHIP RESISTORS
General purpose solder-coated wraparounds and flipchips for reflow applications; gold topside terminations for wire bonding, ultra low to high megohm values; 1%, 2%, 5%, 10% tolerances.



FLAT PACKS
Application to high density packaging in airborne computers. Standard "A" and "B" schematics available as well as R-C networks tested to Group A of MIL-R-83401.



LEADLESS CHIP NETWORKS
Standard "A" or "B" schematic in single-layer ceramic with glazed overcoat or with ceramic cover; 100 ohms to 1 megohm; 1%, 5%, 10% tolerances.



CUSTOM NETWORKS
Custom sizes as well as networks including binary, R-2R, and decade configurations. Laser or abrasive trimmed as required to meet tolerancing demands.

Features:
- Standard circuits for military and commercial applications.
- Custom circuits to meet demanding or unique applications.
- Ruthenium-based screened films.
- Pt/Au or Pd/Ag terminations as required.
- Broad packaging sizes and styles – Standard DIL's, 3-13 pin SIL's, oversize .600 centers or greater DIL's.
- Rugged ceramic-based construction yields dependable performance and low cost.
- Discrete performance with space saving and greater reliability of networks.

Performance/Design Characteristics
- Tolerances: .1% – 20%.
- Resistance values: .1 ohm to 1 gigaohm.
- TCR's: 100 & 250 ppm standard; 50 ppm available.
- Operating temperature range: – 55° C to +125° C.
- Tracking: 10 to 25 ppm.
- Testing to full MIL-spec requirements available.

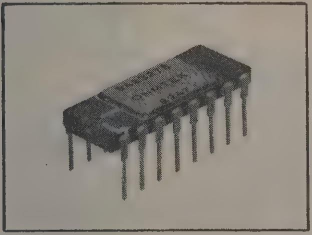
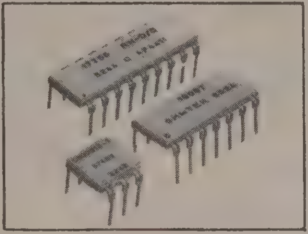
OHMTEK Precision Resistor Networks

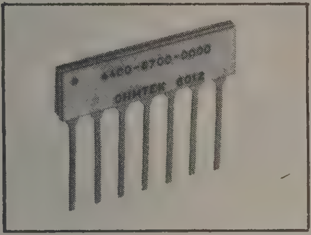
Wirewound Performance in Contemporary Packages



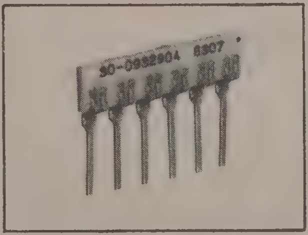
DUAL-IN-LINE HERMETIC
Meets Mil-R-83401 Characteristic "C" for military and other environmental extremes. Available 8, 14, 16 and 18 leads.



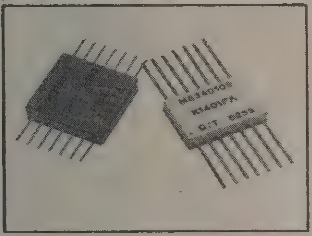
DUAL-IN-LINE CERAMIC SANDWICH
Meets Mil-R-83401 Characteristic "V". Packages of 4-22 leads in rugged monolithic inexpensive construction with highest precision in the industry.



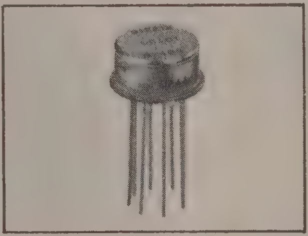
SINGLE-IN-LINE MIL-GRADE
Meets Mil-R-83401 Characteristic "V". 3-13 lead ceramic sandwich construction in high and low profile versions.



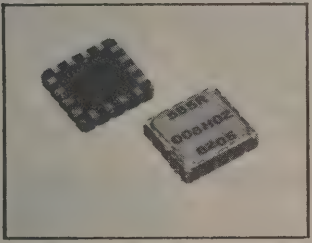
SINGLE-IN-LINE CONFORMAL
3-13 lead packages available. Designed for a wide range of tolerances and values at minimum cost.



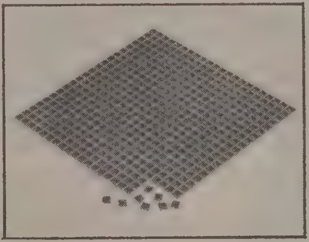
FLATPACKS
Hermetic or non-hermetic meet Mil-R-83401 Characteristic "C", "V" or "K". Available in 14 through 28 lead packages.



TO-STYLE HERMETIC
Available for custom precision applications requiring very low TCR and tight tracking.



LEADLESS CHIP CARRIERS
Hermetic or ceramic sandwich JEDEC packages. Standard and custom schematics available.



CHIP RESISTORS AND ARRAYS
Exceptional stability and reliability. Available in general purpose, 30-Mil square Mil-R-55342 characteristics and custom circuit arrays on ceramic or silicon.

Features:

- Standard circuits for military and commercial applications.
- Custom circuits as required for demanding applications.
- Nichrome or Tantalum based films optional.
- Wide packaging styles – standard hermetic or versatile custom pin counts with ceramic sandwich and conformal coated styles.
- Full Mil-spec screening available in-house.
- Rugged construction provides dependable performance at minimum cost.
- Network reliability greater than discrete resistor arrays.

Performance/Design Characteristics:

- Tolerances: .005% – 1%
- Resistance values: 10 ohms to 10 Megohm.
- Low TCR: 25 ppm/°C Std.
- Ultra low TCR: 10 and 5 ppm/°C available.
- Tracking less than 1 ppm.
- Operating temperature range: –55°C to +125°C
- Low noise: –35 db
- Stability: Δ R less than 200 ppm/70°C/ 10,000 hrs.

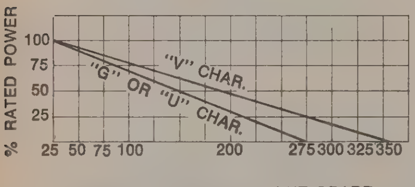
PRECISION POWER RESISTORS
Sub-Miniature Wire Wound V-Coated for 350° C

TYPE A MOLDED
.4 to 14 watts

TYPE B MOLDED
1 watt to 10 watts Beryllium or Alumina Oxide Core

ELECTRICAL SPECIFICATIONS

1. **Tolerances** — 5%, 3%, 1%, .5%, .25%, .1%, .05%, .02%.
2. **Dielectric Strength** — 500 VAC for 04A, 05A, 15A; B1, B3. Bal. 1000 VAC, circular foil wrap method or V-block.
3. **Life** — Maximum 0.5% resistance change after 1000 hour load life cycling 1½ hours on, ½ hour off, full load at 25°C).
4. **Temperature Coefficient** — Below 1 ohm = 90 PPM, Below 10 ohms = 50 PPM, Below 50 ohms = 30 PPM, All above = 20 PPM.



AMBIENT TEMP. DEG. CENTIGRADE

GENERAL SPECIFICATIONS

1. **Molded Type A** axial-lead resistors, molded for uniformity and minimum size for today's space age requirements.
2. Completely welded construction.
3. Meet or exceed requirements of Mil-R26, characteristic U.
4. Leads are tinned copperweld. Other materials available on request.
5. High temperature silicone molded coating.
6. **Molded Type B** beryllium oxide or alumina with power ratings 1.4 to 4 times higher than conventional ceramic resistors of the same size.

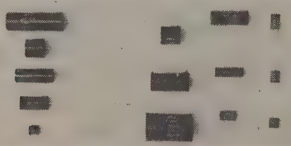
For Non-Inductive Winding add Suffix "N" to Callout.

MOLDED PRECISION WIRE WOUND RESISTORS



All are non-inductively, reverse Pi wound at minimum wire tension for maximum long life stability. All production is aged before calibration for insurance of minimum long-term load-life drift. Due to advance winding techniques and design they have extremely low rise time characteristics approaching film type resistors. Through matching of materials, resistance changes from temperature expansion rates is eliminated. Zero voltage coefficient and low noise characteristics. Leads are solderable or weldable. TC of 15 PPM/°C standard. TC of 2 PPM/°C to 6000 PPM/°C available. All bridges and other instrumentation used in calibration are periodically checked against National Bureau Primary Standards. Designs exceed Mil-R-93 and Mil-R-9444. Distinct capabilities for: Special Networks; Matched Sets; Voltage Dividers; Molded and encapsulated Modules.

TYPE AP: AXIAL PRECISION
TYPE LP: LUG PRECISION
TYPE RP: RADIAL PRECISION
TYPE RPC: RECTANGULAR PRINTED CIRCUIT
TYPE PC: PRINTED CIRCUIT

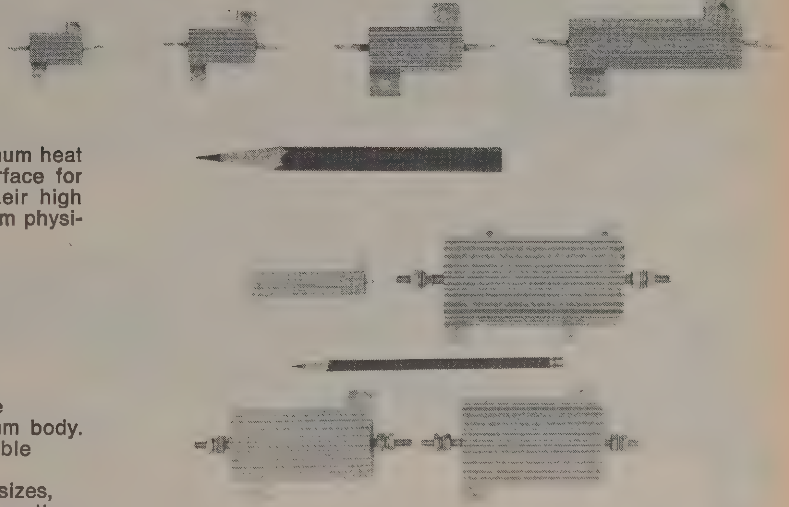
PACIFIC RESISTOR CO.

18300 OXNARD STREET, TARZANA, CA 91356 • (818) 345-7811 - (818) 873-4574 • Inside CA: 800-835-3355 • Outside CA: 800-367-6677

PRECISION POWER RESISTORS Aluminum-Finned Heat Sink

TYPE CH CHASSIS MOUNT
5 through 250 watts

TYPE BCH CHASSIS MOUNT
15 through 35 watts
Beryllium Oxide or Alumina Core



Chassis Mount, Type CH units are designed for maximum heat dissipation by mounting solidly to metal chassis surface for maximum heat transfer. They are outstanding for their high power dissipation with precision tolerances in minimum physical sizes.

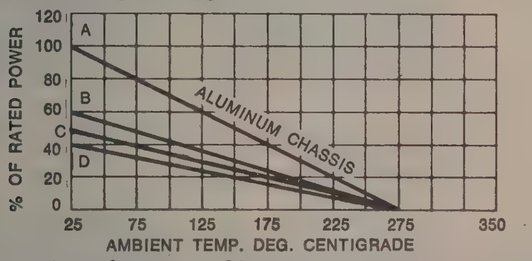
ELECTRICAL SPECIFICATIONS

1. Resistance Range — .05 ohms to 275K ohms.
2. Tolerance — 5%, 3%, 1%, .5%, .25%, .1%, .05%.
3. Temperature Coefficient — ±20 PPM to 90 PPM

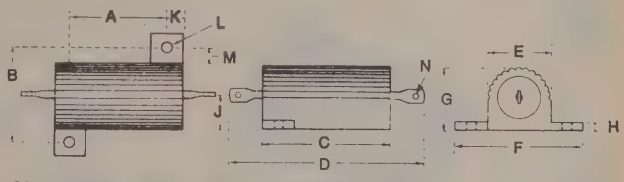
GENERAL SPECIFICATIONS

1. Lower hot spot ratings due to exclusive complete encapsulation of element within anodized aluminum body.
2. Welded construction throughout assures long stable load life.
3. Heavy spade lug type leads on 5 through 70 watt sizes, threaded heavy stud terminals on 100 through 250 watts.
4. 1000 VAC minimum dielectric strength on 5CH, 10CH, B5CH and B10CH; 2500 VAC on 25CH, 50CH, 100CH, and B25CH; 5500 VAC on all others.
5. Temperature Range — −55°C to +275°C.
6. Eight standard sizes.

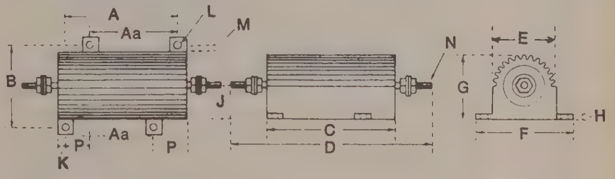
DERATING CURVES



Temp. of −55°C to +275°C. Derating is required for reduced chassis mounting area and high ambient temp.
Curves:
A — When mounted on proper alum.
Chassis:
4x6x2x.040 alum. chassis = 5CH & 10CH.
5x7x2x.040 alum. chassis = 25CH, B25CH, & B50CH.
12x12x.059 alum. panel = 50CH & 100CH.
12x12x.125 alum. panel = 110CH, 180CH, and 250CH.
B — Unmounted 5CH, 10CH, B5CH, B10CH.
C — Unmounted 25CH, 100CH, B25CH, and 110CH.
D — Unmounted 50CH, 180CH, and 250CH.



5CH, 10CH, 25CH, 50CH, 100CH, B5CH, B10CH, B25CH



110CH, 180CH, 250CH

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

* 0.02 ohm to 0.1 ohm and maximum resistance values available in non-standard physical sizes −0 +.062". All low value 2-terminal designs are calibrated and tested at mid-point on lead unless otherwise specified.

CONSIDER THESE INNOVATIVE FEATURES:

1 WIDE RESISTANCE RANGE

"Widest in the industry" any ohmic value or decimal part of an ohm from 0.005 ohm to 4 megohms.

2 DEPENDABLE TOLERANCES

Small quantity lots, as well as, competitive high volume production quantities are accurately checked 100% to assure specified limits . . . ±1% (Std.), ±0.5%, ±0.25%, ±0.1% and ±0.05% resistance tolerances.

3 STABILITY VS. TEMPERATURE CHARACTERISTICS

Carefully selected materials/processes & quality control procedures insure low temperature (TCR) and power coefficients. Standard: Zero ±5 ppm/°C to zero ±20 ppm/°C. Special to ±2 ppm/°C.

4 HIGH VOLTAGE RATINGS

(D.C. Voltage or Peak Voltage)
Precision's high operating voltage winding patterns also eliminate dangerous crossovers and potential problems of standard mandrel style resistors. To calculate the safe operating voltage for any resistance value below the maximum listed, apply the formula $E = \sqrt{PR}$.

5 PRECISION POWER RATINGS

All (Std.) Type SM 1% tolerance resistors are designed for continuous full load operation at 25°C. Derate to zero power at +275°C.

6 SOLVENT RESISTANT COATING

All Type SM resistors are sealed in a tough solvent resistant — high temperature silicone coating . . . with indelible marking.

THE ULTIMATE IN PRECISION AND VALUE:

1 RESISTANCE RANGE AND TOLERANCE
Standard: Any ohmic value or decimal part of an ohm desired from 0.1 ohm to 10 megohms with tolerances to ±0.001%, (±0.01% Std.)

2 TEMPERATURE COEFFICIENT OF RESISTANCE
Standard: Zero ±5 ppm/°C (100 ohms and above). Zero ±15 ppm/°C (values below 100 ohms). Special: To ±1 ppm/°C.

3 STABILITY VS. TIME CHARACTERISTICS
To ±0.001%/year @ 25°C. e.g. 10% of tolerance: ±0.01% = 0.001%/year.

REASONS FOR SPECIFYING TYPE SX RESISTORS:

1 RESISTANCE RANGE AND TOLERANCE
"Repeatable (part-to-part)". any ohmic value desired with tolerances of ±1% (Std.), ±½%, ±¼%, ±1/10% and ±1/20%.

2 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)
Zero ±10 ppm/°C (standard).

3 INDUCTIVE VS. NON-INDUCTIVE
The standard Type SX resistors are inductively wound. Add suffix letter "N" in part number for standard non-inductive resistors. Special non-inductive winding patterns are available for evaluation.

4 STABILITY VS. TIME CHARACTERISTICS
"Long Life"
To ±0.005%/year at 25°C (no load).

5 POWER RATINGS VS. AMBIENT TEMPERATURE AND RESISTANCE TOLERANCE
Full power ratings to +125°C, are based upon standard ±1% resistance tolerance. Derating is required for higher temperatures and closer resistance tolerances.

6 TERMINALS
Solderable "hot-tinned" copper wire leads act as an excellent wetting agent and provide long shelf life. Low EMF construction reduces thermal effects.

7 PROTECTIVE COATINGS
Type SX: New solvent resistant silicone-epoxy-seal.

PRECISION'S linear (+) TCR thermal tracking resistors function as **economical temperature sensing** devices or used as **compensators** for voltage stabilization.

Maximum Resistance values based upon .001″ wire size. Hundreds of additional physical sizes and TCR combinations are available.

PURCHASING INFORMATION
Please specify: Quantity, type, resistance value, resistance tolerance and special features which may apply.

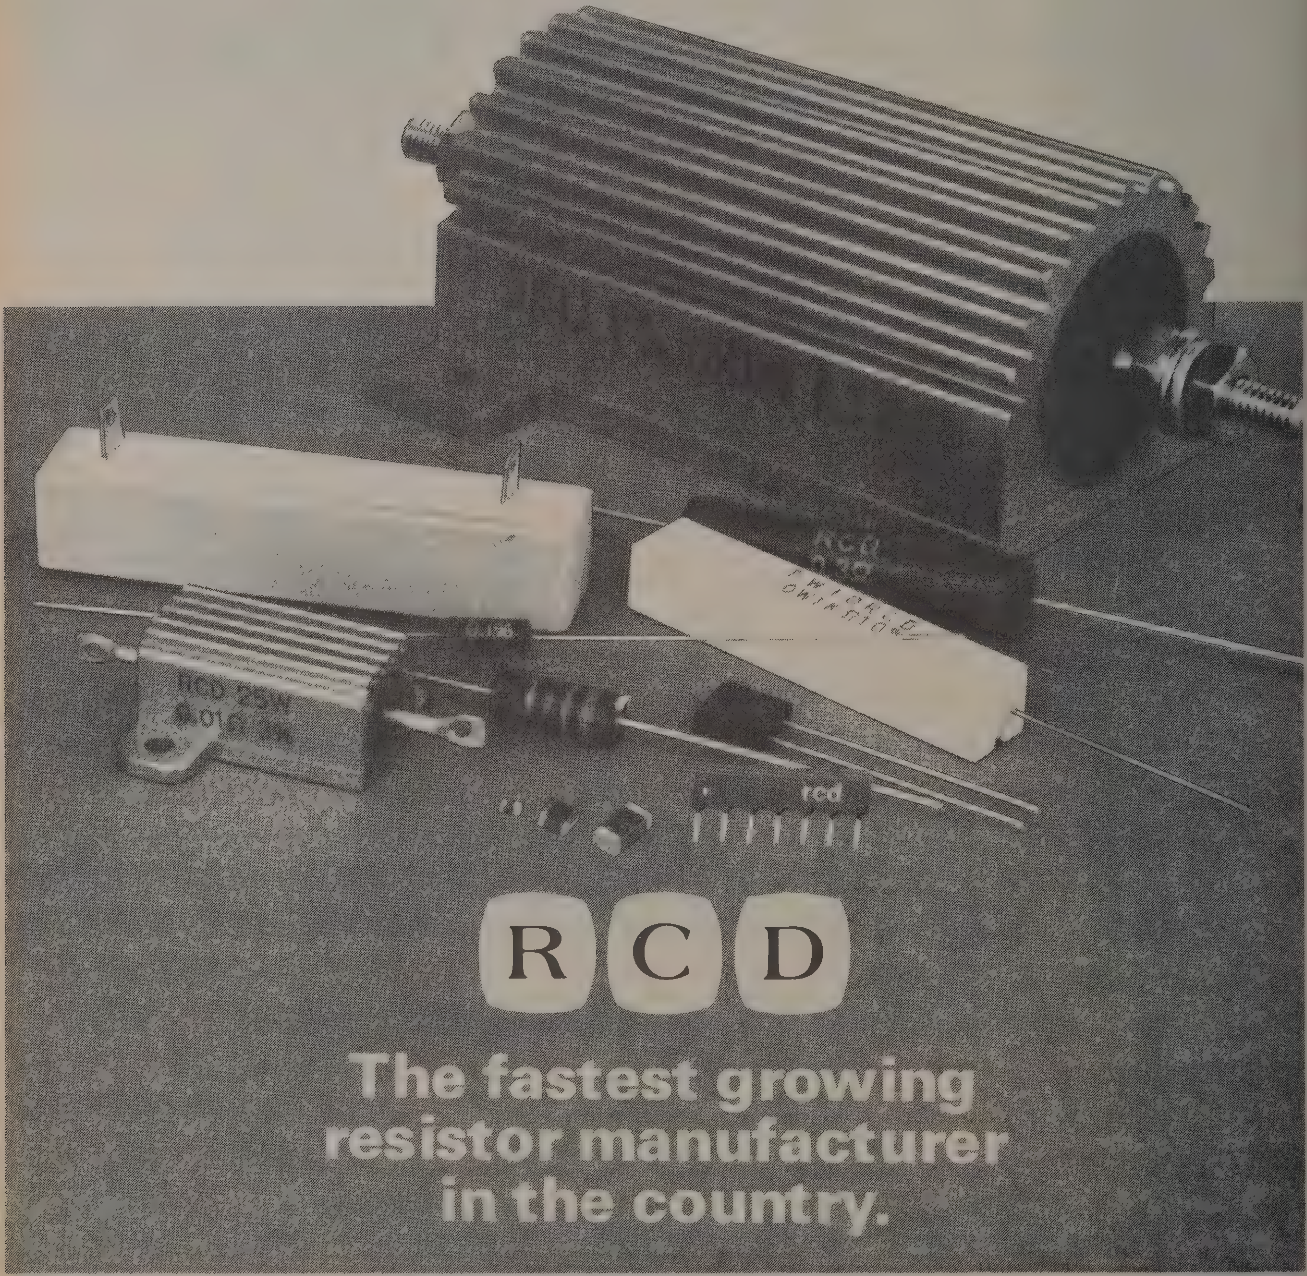
PRODUCTION CAPACITY
Small quantity lots delivered quickly . . . No minimums. Also PRECISION has competitive high volume general purpose resistor capabilities.

50 YEARS EXPERIENCE
Request our "easy to specify" brochure and select exactly what you need. Let our experience in resistor design and manufacturing work for you.

PRC PRECISION RESISTOR CO., INC.
109 U.S. HIGHWAY #22 • HILLSIDE, NJ 07205 U.S.A. • TEL: (201) 926-3036 • TELEX: 13-6479 (413)

It's simple.

If we can't save you money on resistors, then we don't deserve your business.



R C D

The fastest growing
resistor manufacturer
in the country.

RCD Quick Reference Guide

POWER WIREWOUND RESISTORS

STOCK	**Series 100*** ¼W-20W	Silicone coated, all-welded, per MIL-R-26(RW), MIL-R-39007 (RWR). .001Ω to 300KΩ, tolerances to ±0.01%, TCR to 5PPM. 100X — non-inductive 100BEO — increased power 100R — radial leads 100F — flameproof coating
	Series 600*  5W-300W	Silicone molded in an aluminum housing. High wattage capability with chassis mounting, per MIL-R-18546(RE), MIL-R-39009(RER). .005Ω to 200KΩ, tolerances to ±0.01%, TCR to 5PPM. 600X — non-inductive 600BEO — increased power
STOCK	**Series PW***  2W-50W	Low cost general purpose wirewounds. Ceramic encased, completely flameproof. PWX — non-inductive PWA — standoffs PWR — radial leads PWF — failsafe fusible PWS — miniature sizes
	Series RW 1W -3W	Low cost epoxy molded or conformal coated wirewounds offer savings over carbon comps. RW-1 (1-watt) is the size of a ½-W carbon comp. RW-2(2W) and RW-3(3W) are both the size of a 1W comp. RWF — Flameproof fusible
	Series ULV,LVF* 1W-25W	Series ULV utilizes a newly-developed manufacturing technique to obtain very low values (to 0.002Ω), with precision accuracy at lowest cost. LVF — four terminal construct.

THICK FILM RESISTORS

STOCK	**Series RSF,BW** ¼W-9W	**METAL OXIDE RESISTORS** Flameproof, thick complex-oxide construction results in performance and size of wirewounds, at significant price reductions. Non-inductive, high-surge capability. 0.1Ω to 240K stocked. BW Series is fusible.
	RG, UHV ¼W-4W	**HIGH VOLTAGE/HIGH MEGOHM** Voltage capability to 50KV. Resistance to 10,000 Gig. Tolerances to 0.5%, TCR to 50PPM.
	Series MG ½W- 1W	**SPACE SAVER RESISTORS—** Miniature resistors! ½-watt is ⅛W size, 1-watt is ¼-watt size. Improved dissipation due to thick cermet glaze. 6.2 ohm to 1 Meg, TCR to 50 PPM, tolerances to 1.0%.
	Series MC, MCR 1/16-1.0W	**THICK FILM CHIPS—12 SIZES** High-stability thick film chip resistors. 4.7Ω to 2000 Meg. Wraparound termination available. Tolerances to 0.25%, TCR to 50PPM.
	Series MR,MCF 	**WORLD'S SMALLEST!** Cermet micro-resistors offer highest performance in smallest possible size. Under 0.1" long! 4.7Ω to 8.2 Meg. Axial or radial leads.
STOCK	**DIP,SIP ***	**THIN FILM/THICK FILM—** RCD resistor networks offer premium performance per MIL-R-83401. SIP packages are 4 to 12 pin. DIP's are 14 or 16 pin. Variety of standard and custom configurations, hybrids available.

PRECISION WIREWOUND RESISTORS

Series SA,MA* .1W-2W	Epoxy encapsulated, non-inductive precision bobbin wirewounds per MIL-R-93(RB), MIL-R-39005 (RBR). 0.1Ω to 25 Meg, tolerances to ±0.005%, TCR from ±1PPM to +6700PPM
Series PC*  .1W-1W	Same as Series SA, MA but feature radial leads for easy PCB insertion and space savings per MIL-R-93, MIL-R-39005. PC451 (rectangular) is direct low-cost replacement for ultra-precision films.
Series Q* .1W-1W	Wirewound substitutes for precision metal film's RN55, RN60, RN65, RN70, RN75. Better stability, lower price. TCR as low as ±2PPM. Tolerances to ±0.01%.

THIN FILM RESISTORS

	Series MF* .1W-1W	Precision metal film per MIL-R-10509, RN55,60,65,70,75 and MIL-R-55182(RNR,RNC). 10Ω to 5.1 Meg, tolerances to ±0.05%. Outstanding TC's to 5PPM.
STOCK	**Series GP–Metal Film** .1W-1W	Commercial metal film with MIL-spec performance at half the price! Exceeds MIL-R-10509(RN),-22684 (RL),-39017(RLR). Values to 22.1 Meg, TC's to 25PPM, tolerances to ±0.5%.
STOCK	**Series CF -Carbon Film** 1/8W-2W	General purpose carbon fim feature highest grade core for extended life stability and overload dissipation. 1ohm to 22 Meg, 7 standard sizes. Series CFF is flameproof.

TEMPERATURE SENSORS

LP 1/4 +150°C	Low cost metal film with linear positive TCR. 33Ω to 30K, tolerances to ±1.0%. Available in any T.C. up to +5000PPM (.5%/°C). Only ¼" long.
ATB,PTB,ATS,ATC * +375°C	Precision wirewound, axial or radial. Interchangeable TCR, 1Ω to 1 Meg, tolerances to ±0.05%. Available in any T.C. up to +6720 PPM.
PTC,PTS * +600°C	Ceramic encased RTD elements or stainless steel RTD probles. Platinum, Nickel, Nife elements stocked. Tolerances to +0.1%.

SPECIALTY PRODUCTS

	FUSE RESISTORS 1/8W-10W	Standard and Custom fusing curves to provide precisely controlled circuit protection. Fusing time to 5μS at 0.1A and up.
	SURGE RESISTORS * 1W-50W	Withstand high energy dissipation and absorb surges up to 75 joules with minor resistance shift Standard and Custom designs.
STOCK	**ZERO OHM**  ¼W	Insulated jumpers come in 1/4W size and are suited for automatic insertion. Resistance is .02 ohm or less. Chip jumpers available.

INDUCTORS

STOCK	**Series AL**	Low cost color banded inductors per MIL-C15305. Special core results in high Q and SFR, low DCR. .22μH to 56000μH. Axial or radial leads. Shielded type available.

CUSTOM

RCD manufactures a series of custom coil products including toroids, transformers, and shielded chokes. RCD also offers custom Res/cap, Res/Diode hybrid networks and voltage dividers.

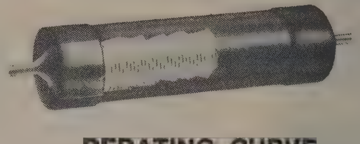
* Don't forget our **'SWIFT'** service (**S**hip **W**ith **I**n **F**ifty **T**wo hours) when you require fast delivery of a non-stock item!

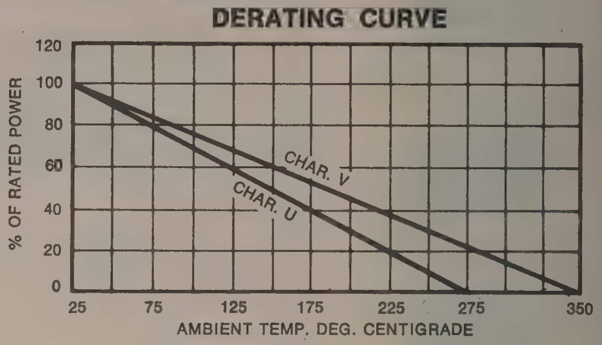
RCD Components Inc. • 330 Bedford Street, Manchester, NH 03101 • (603) 669-0054 Tlx: 943512

RCL:Shallcross POWER WIREWOUND RESISTORS

MIL-R-26, TYPE RW

T Series, Silicone Coated





GENERAL SPECIFICATIONS

Wattage Range: 25 styles to choose from ranging from .4 to 14 watts.

Resistance Values: From 0.1 ohm to maximum values as stated in table. For values below 0.1 ohm, use RCL-Shallcross Low Ω Metal Element Resistors.

Power Rating: Two power ratings, depending on operating temperature and stability requirements:

- Characteristic U: 275°C maximum hotspot temperature.
- Characteristic V: 350°C maximum hotspot temperature.

Derating: Wattage Ratings based on operation at 25°C. For higher ambient temperatures, derate per derating curve.

Tolerance: ±1.0% is standard. Closer tolerances are available.

Temperature Range: From −65°C to +275°C (Characteristic U) or +350°C (Characteristic V).

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 500Ω and up, ±30 PPM/°C = 10Ω to 499Ω, ±50 PPM/°C = 1Ω to 9.99Ω, ±90 PPM/°C = 0.1Ω to 0.99Ω, ±400 PPM/°C = 0.025Ω to 0.099Ω, ±650 PPM/°C = 0.01Ω to 0.024Ω.

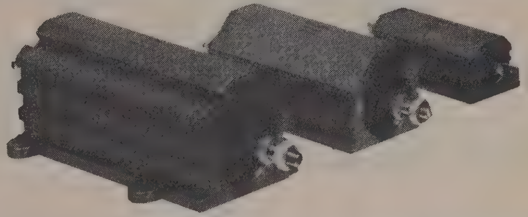
RCL·Shallcross POWER WIREWOUND RESISTORS

MIL-R-18546, TYPE RE

AL Series, Aluminum Housed Chassis Mount



GENERAL SPECIFICATIONS

Wattage Range: 7 styles to choose from ranging from 5 to 250 watts.

Resistance Values: From 0.1 ohm to maximum values as stated in table.

Power Rating: 275°C maximum hotspot at 25°C ambient. 1% maximum ΔR in 1000 hour load life.

Derating: Wattage ratings based on operation at 25°C. For higher ambient temperatures, derate per derating curve.

Tolerance: ±1.0% is standard.

Temperature Range: From −55°C to +275°C.

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 10Ω and up, ±50 PPM/°C = 1Ω to 9.99Ω, ±90 PPM/°C = below 1Ω.

[1] MIL-R-39007 Approved. To Life Failure Rate M, P, R, & S.

[2] Tolerances F (1%), D (.5%) and B (.1%) available at Life Failure Rate M, P, R, & S.

[3] Ayrton Perry Winding available for Non-Inductive requirements.

MIL-R-39009, TYPE RER, R LEVEL

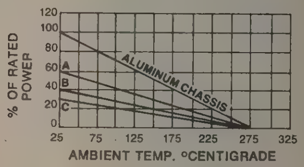
AL-ER Series, Aluminum Housed Chassis Mount

GENERAL SPECIFICATIONS

Wattage Range: 4 styles to choose from ranging from 5 to 50 watts.

Power Rating: 275°C maximum hotspot at 25°C ambient. 1% maximum ΔR in 2000 hour load life.

Derating: AL-ER chassis mount resistors have an operating temperature range of −55°C to +275°C. For higher ambient temperatures, use derating curve which applies to operation of unmounted resistors (A = AL5ER and AL10ER, B = AL25ER and C = AL50ER).



Tolerance: ±1% is standard.

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 20Ω and up, ±50 PPM/°C = 1Ω to 19.6Ω, ±100 PPM/°C = below 1Ω.

Dimensional Specifications: Identical to AL Series on previous page.

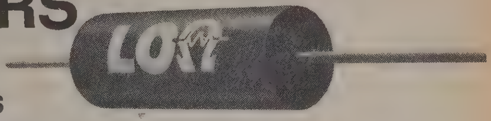
LOΩ® METAL ELEMENT RESISTORS



Low Ohmic Value At An Affordable Price

GENERAL SPECIFICATIONS

Wattage Range: 3 and 5 watts.

Resistance Values: 0.005, 0.01, 0.015, 0.02, 0.025, 0.03, 0.04, 0.05, 0.07, 0.08, 0.1, 0.2 ohms.

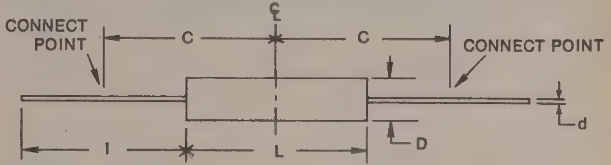
Derating: Lo Ω Metal Element Resistors are derated linearly from room temperature at full power to 0 power at 275°C.

Tolerance: 5% — All styles and values, 3% — All styles and values, 0.5% available above 0.005 ohms.

Construction: Tinned copper leads are welded directly to a low temperature coefficient of resistance element by a highly mechanized proprietary process. Resistors are encapsulated in a special formulated compound.

FEATURES

- Ultra Low Resistance Valves
- High Stability Over Life
- Low Temperature Coefficient of Resistance
- Inherently Non-Inductive



DIMENSION SPECIFICATIONS

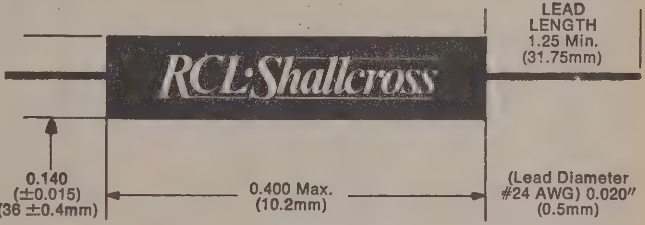
DUAL FUNCTION FUSE RESISTORS

A Dual Purpose Device That Acts As Both A Wirewound Resistor and Fuse

GENERAL SPECIFICATIONS

Resistance Range: 0.2Ω to 200Ω.
Resistance Tolerance: 10% is standard, 5% and 2% definition.
Blow Characteristics: Per table — 2 pt. definition.
Operating Temperature: −55°C to +150°C
Temperature Coefficient: ±50 PPM/°C Max.



LEAD LENGTH 1.25 Min. (31.75mm)
RCL·Shallcross
0.140 (±0.015) (36 ±0.4mm)
0.400 Max. (10.2mm)
(Lead Diameter #24 AWG) 0.020" (0.5mm)

FEATURES

- Affords protection for semiconductor devices
- Eliminates fire hazard and circuit board damage to overheated components
- Eliminates unnecessary blowing due to transient conditions
- Reduces the number of discrete components required.

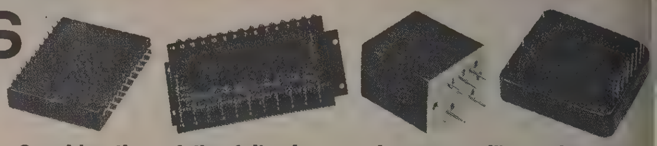
RCL·Shallcross DISCRETE RESISTOR NETWORKS & MATCHED SETS



NETWORKS

Network quality is determined by the qualities of its individual resistors and the packaging and mounting expertise of its assembler. RCL/Shallcross offers a unique background of experience, data, manufacturing and testing skills for its wirewound resistor networks. PARAMETERS: (1) Resistance ratios to .001%, (2) Resistor tolerances to ±.005% (at ambient), (3) Ratio tolerances as close as .01% (over a range of temperatures), (4) Stability to ±.001% per year.

MATCHED SETS

Two or more resistors can be matched with relative tolerance much higher than each one's individual tolerance. Characteristics most often matched are: (1) DC Resistance at one or more temperatures, (2) AC and DC Voltage ratios, (3) Temperate Coefficients and (4) Phase Shifts. Principle advantages of matched sets are: (a) Very tight relative tolerances, (b) Lower cost than networks of comparable accuracy and (c) Flexibility in locating components during design and packaging. An engineering staff at RCL/Shallcross is ready to assist you in specifying your matched set requirements.

Consideration of the following requirements will provide our engineering staff with adequate information to complete your specification and quotation:

A. CIRCUIT

Resistance values ....
Resistance tolerances ....
Ratio/Ratios ....

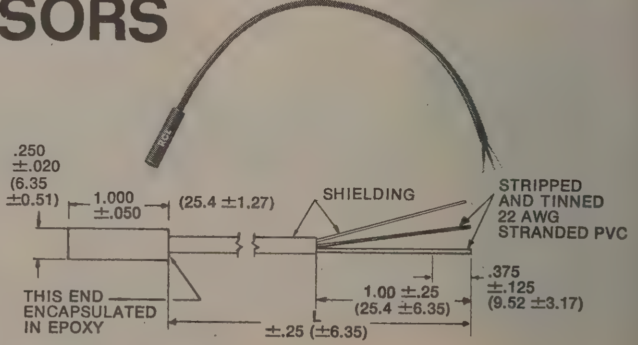
RCL·Shallcross MOLDED TEMPERATURE SENSORS

RCL offers a standard line of epoxy encapsulated sensing resistors for temperature compensating applications. The standard resistance tolerance ±5% with tighter tolerances available on special order. Cable lengths from 2.0″ to 48.0″ (50.80 to 1219.2 mm) are available with 6.0″ (152.40 mm) standard. Operating temperature range is −55°C to +105°C. Repeatability of tempco within a given lot is ±100 PPM.



RCL Style	Resistance Range	PPM/°C Average Tempco 0°C — 100°C
TC35	10Ω — 50KΩ	3500 ±350
TC45	10Ω — 10KΩ	4500 ±450
TC55	10Ω — 5KΩ	5500 ±550

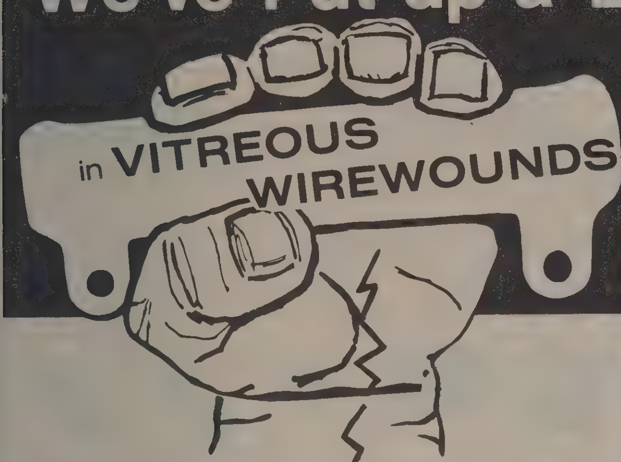
We've Put up a LOT of Resistance...



Reliable Performance *Wherever* Needed!

For More Than 30 Years Our Famous, *Versatile* Ohmic Capabilities have met the rigid demands of smart buyers with unerring consistency — saving time, tempers and money.

Against this enviable background our engineers envision even greater challenges in solving future OEM and industrial resistor application problems. For prompt, practical answers to your requirements, send us your prints or specs.

RESΩNET®

ULTRA PRECISION METAL FILM RESISTORS & NETWORKS

RESISTANCE TOLERANCES — 0.005% to 1%

TEMPERATURE COEFFICIENT — 1, 2, 5, or 10ppm/°C

FEATURES

Long Term Stability: 25ppm/year
Noise Factor: Below 30db
Inductance: Approx. .05 microhenry
Capacitance: Below 0.5 picofarad
Voltage Coefficient: < 2ppm/volt
Rise Time: Less than 1ns without ringing

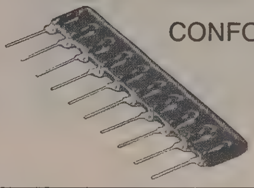
CONFORMAL SIP



FEATURES/SPECIFICATIONS

These low cost conformally coated SIP resistor networks are made to the same high standards as the molded types. They are available in two standard schematics "C" and "G" and special designs. Choose from 5 to 11 pins depending on circuit.

Resis. range: 10 Ohms to 1meg Ohms.
Resis: Tol.: ±2%
TC: ±200 PPM/°C
Oper. Temp.: -55° to +125°C
Oper. Volts: 250 (max.)
Insul. Resis.: 10k meg Ohms
Power Rating: 250 mW @ 25° C
125 mW @ 70° C

HOW TO ORDER

8 C L 1003 G C
① ② ③ ④ ⑤ ⑥

① 8 = # pins (5 to 11)
② C = Conformal coated low profile
③ L = TC (±200ppm/°C)
④ 1003 = 100,000 Ohms (See description to left)
⑤ G = Tol. (±2%)
⑥ Schematic (C or G)

eem

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

Quality fixed wire-wound & Precision metal film resistors.

For over thirty years, Tel Labs has been establishing the standard of quality for the design and manufacture of fixed wire-wound resistors. We are now also producing a complete line of precision metal film resistors in our new 10,000 square foot plant, utilizing the same unsurpassed quality control upon which our reputation was built.

We encourage your comparison between our American manufactured products and any other resistor on the market today.

Demand quality. Specify Tel Labs.

1.1MΩ to 10.0MΩ	—	−300 to −1800	−300 to −1800	−300 to −1800	−300 to −1800

The carbon film resistors contact caps are pressed on the rods and a helical grove cut through the film to give the required resistance value. Connecting wire of lead-tin coated electrolytic copper are welded to the end caps. Finally the resistors are coated with multiple layers of insulating lacquer. This process gives every resistor the better characteristics in respect to the mechanical and electrical such as Loading Temperature coefficient, current Noise and etc.

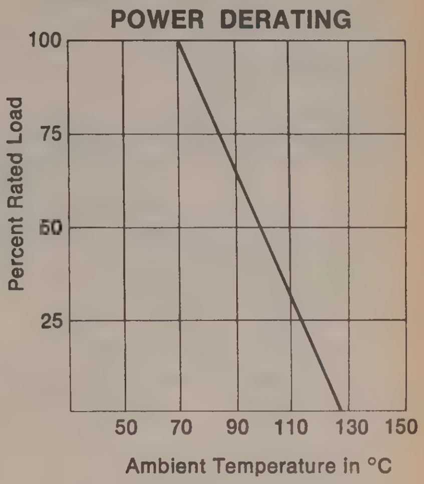
CHARACTERISTICS

Requirements	Carbon Film Resistors				
Operating Temp. Range	−25 to +125°C				
Current Noise (μv/v)	**Noise Style**	0.1	0.3	0.6	1.0
	CF-⅛ CF-¼	Under 10kΩ	11kΩ −100kΩ	110kΩ −1.3MΩ	Over 1.5MΩ
	CF-½	Under 10kΩ	11kΩ −270kΩ	300kΩ −4.7MΩ	Over 5.1MΩ
Dielectric Withstanding Voltage	No evidence of flashover, breakdown				
Short Time Overload	±(1% + 0.05Ω)				
Vibration	±(1% + 0.05Ω)				
Temp. Cycling	±(0.75% +0.05Ω)				
Effect of Soldering	±(1% + 0.05Ω)				
Moisture Resistance	< 100kΩ ±3% ≥ 100kΩ ±5%				
Load Life	±5%				

These characteristics are tested by our factory's quality control department to conform to DIN 44061, MIL-R-10509F (Char. D & C) and MIL-R-22684 and are determined under the following conditions.



1. **Short-Time Overload Tests**
   100 samples of each value (high 10K ohm and over and low 1k ohm below were taken for each test). There are altogether 12 tests formed by various combinations of the 4 loading conditions (1½, 2, 2½, 3 times rated voltage) and the 3 loading durations (1, 2, 5 sec.) The initial resistance values (before overloading) were compared with the final resistance values (after loading) after a recovery period of more than 2 hours.

2. **Vibration (Low frequency)**
   Resistors shall be mounted on appropriate jig fixtures and supported by their leads at the distance of 9.5 mm from the body and subjected to a single vibration having an amplitude of 0.8 mm for 2 hours in each direction for a total of 6 hours. The vibration frequency shall be varied uniformly 10 to 55 Hz and return to 10 Hz shall be traversed n 1 minutes.

3. **Temperature Cycling**
   Resistance change after 5 cycles for duty cycle as follows;

Step	Temperature	Time
1	-55^{+0}_{-3}C	30 minutes
2	25^{+10}_{-5}	10 to 15 minutes
3	85^{+3}_{-0}	30 minutes
4	25^{+10}_{-5}	10 to 15 minutes

4. **Solderability (When tested per MIL-R-202D method 208)**
   100 samples were also taken for this test. The resistors under test were dipped up to 2-3 mm from the roots of the main bodies into a solder tank of temperature 350°C ±10°C for 3 ±0.5 sec.

5. **Moisture Resistance (Long term)**
   Resistance change after 500 hours operating at rated continuous working voltage at 40 ±2°C and 90 to 95% relative humidity for duty cycle of 1.5 hour "on," 0.5 hour "off."

6. **Load Life**
   Resistance change after 1,000 hours operating at rated continuous working voltage at 70 ±3°C for duty cycle 1.5 hour "on," 0.5 hour "off."

7. **Noise**
   The noise voltage per volt produced in dividing the noise voltage by load voltage which generates from resistors when the rated voltage was added to the Resistors.

COLOR CODING

The resistance value and tolerance are indicated by a four-band color code:

Terminal Strength: .5% +.05Ω

The GP¼ is a superior dual rated, general purpose metal film resistor. Available as either a 5% general purpose or a 2% semi precision resistor, this conformally coated device exhibits a temperature coefficient of ±200 ppm/°C — far superior to the industry average.

Since it can perform in ¼W and ½W applications, the compact GP¼ saves valuable "real estate" in circuit boards while offering versatility for inventory purposes. This space saving capability coupled with the GP¼'s compatibility with automatic insertion equipment makes it the ideal alternative to carbon composition and carbon film resistors for computer, telecommunications, instrumentation, and many automotive applications.

All the quality and reliability exhibited by TRW Resistive Products for several decades are manufactured into the GP¼. The same sturdy ceramic end cap construction and quality materials have been combined with an automated assembly technique that results in TRW quality at a lower price.

Lead Material: Electroplated Copper

Construction: TRW developed alloy metal film on solid ceramic core

The GP55 is a quality, metal film resistor which is intended to help component engineers and circuit designers upgrade or replace carbon composition and carbon film resistors in most circuit applications. The standard unit comes in a 1% absolute tolerance and a temperature coefficient of ±100 ppm.

GP55 meets or exceeds all parameters of MIL-R-10509 (RN55) and MIL-R-22684 (RL07) and has been lab and field tested with many hours of proven reliability. RS-296D, Class I tape and reel is standard, making the GP55 ideal for high volume, automatic insertion applications.

E.I.A. color banding (5 band) is also standard facilitating identification on printed circuit boards.

GP55 is approved and in use by many leading companies in the telecommunications, computer, automotive and instrumentation industries. Improve your cost effectiveness by converting to GP55.

AVAILABLE THROUGH AUTHORIZED TRW RESISTOR DISTRIBUTORS

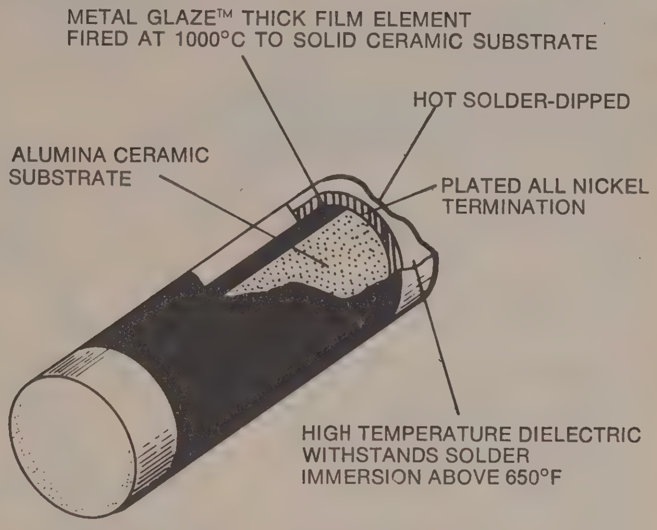
RG CHIP RESISTORS

- ☐ Metal Glaze™ Technology from TRW's RG resistor line. Proven reliability for over 15 years
- ☐ Low TCR — All < 100 ppm/°C
- ☐ Standard size 3.2 x 1.5mm (0.126″ x 0.057″). Compatible with chip placement equipment from Panasonic, Universal, and others
- ☐ Hot solder-dipped nickel contacts withstand prolonged (>60 sec.) immersion in solder with no de-wetting of contacts
- ☐ Bonds to circuit boards with standard techniques using adhesives or solder paste
- ☐ Color band marking available
- ☐ Packaging in bulk or 8 mm tape reels, taping per EIA —RS481



METAL GLAZE™ THICK FILM ELEMENT FIRED AT 1000°C TO SOLID CERAMIC SUBSTRATE
HOT SOLDER-DIPPED
ALUMINA CERAMIC SUBSTRATE
PLATED ALL NICKEL TERMINATION
HIGH TEMPERATURE DIELECTRIC WITHSTANDS SOLDER IMMERSION ABOVE 650°F

SPECIFICATIONS

Resistance Range: 3Ω to 1 meg*, plus zero-ohm jumpers
Tolerances: 1%, 2% & 5%
Temperature Coefficient: <100 ppm/°C for all tolerances*
Rated Wattage: ⅛ W @ 70°C†
Rated Continuous Working Voltage: √.125 x R or 200V, whichever is less
Commercial RCWV: √.25 x R or 200V, whichever is less
Maximum Overload Voltage: 400V
Temperature Range: −55°C to +150°C
Insulation Resistance: 10,000 Meg min.

* Contact factory for other resistance values and other temperature coefficients, or for color banding.

† CHP⅛ may safely be double-rated to ¼ W operation @ 70°C under normal conditions. Derate to zero at 150°C.

COMPARISON WITH MELF CHIP RESISTORS

RG chips are smaller in size than MELF chips, use thick-film technology rather than carbon films, and have plated nickel terminations, not pressed-on end caps. This also eliminates the typical "dogbone" outline seen on MELF's. Unlike MELF's, RG chips are available in standard 8mm tape.

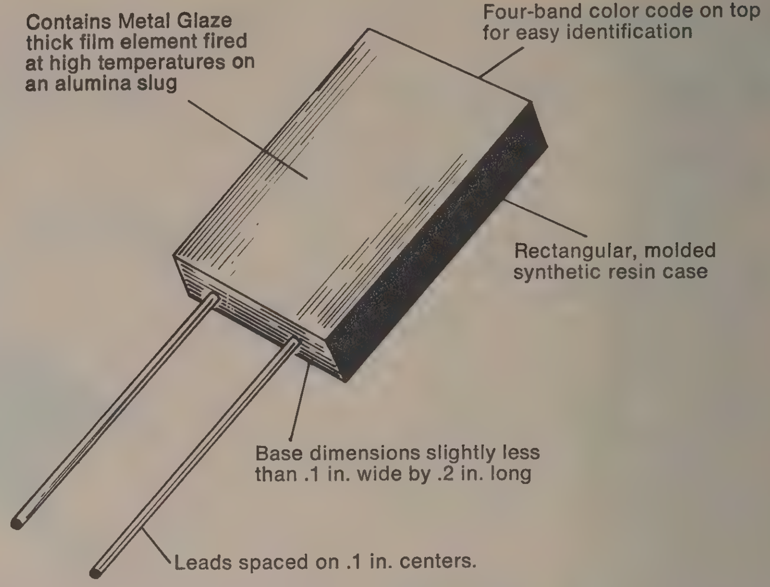
RADIAL LEAD MOLDED METAL GLAZE RESISTORS

RGU SERIES*

- ☐ Take up half the PC board area of comparably rated axial-lead resistors
- ☐ Project 0.39 in. from the board surface when installed
- ☐ Can be placed individually, or grouped in rows, in any direction on standard predrilled PC boards
- ☐ Available on carrier tape and are auto-insertable with existing equipment



Contains Metal Glaze thick film element fired at high temperatures on an alumina slug
Four-band color code on top for easy identification
Rectangular, molded synthetic resin case
Base dimensions slightly less than .1 in. wide by .2 in. long
Leads spaced on .1 in. centers.

SPECIFICATIONS

Resistance Range: 10 ohms to 1 megohm

Tolerance (E96, E24): ±1%, ±2%, ±5%

Temperature Coefficient: ±50, ±100 ppm/°C

Voltage Coefficient: Less than 30 ppm/V

Maximum Continuous Working Voltage: 350V RMS

Dielectric Withstanding Voltage: 1000V RMS min.

Insulation Resistance: Greater than 10^4 Megohms, except top surface

STANDARDS

Electrical properties according to MIL-R 22684

Power Rating: ½ watt at 70°C

Temperature Range: −55°C to +155°C for 56 days, −65°C to +175°C

Stability 70°C, 5000 h: ±0.5%

Damp Heat Steady State (40°C, 90 to 95% R.H., 56 days, 5 VDC): 1.0%

Failure Rate (V_o=155°C): $<5 \times 10^{-9}$/h

NOTES:
(1) Other wattage ratings available on request. Consult factory. For power rating above 70°C, see derating curve.
(2) Voltage rating shown is the rated DC continuous working voltage or the sine-wave RMS absolute maximum voltage at commercial line frequency. For DC applications the absolute maximum permissible voltage is 1.5 times the value shown for low repetition short-time-overload or pulse conditions of 10 seconds or less duration.
(3) Typical voltage coefficient of resistance is -1 to -2 ppm/V measured at full rated voltage and 10% rated voltage.

CGH-7.5 thru -15 contact factory for specifications and higher or lower resistance values.

The new cost effective CM Series of resistors is a result of proven TWR ultra precision resistive technology combined with state of the art high speed production equipment. Our conformal coatting has proven its reliability with extensive environmental testing.

The series utilizes an improved sputtered film system and mechanically superior cap and lead construction. CMs offer the most cost effective solution to ultra stable circuit needs. This product line covers virtually all tolerances, temperature coefficients, and power ratings required for precision resistor applications.

Matched sets of CM Series resistors provide the ultimate in resistor matching and temperature coefficient tracking. Sets with ±.005% ratio tolerance and ±2 ppm/°C temperature coefficient tracking are available in matched sets. Consult factory for details.

MTR7	.650 (16.5)	.195 (4.95)	1.50 ±.125 (38.1 ±3.18)	.025 (.635)

For precision circuits where a high degree of temperature stability is required, MTR Series metal film resistors can be used to reduce the temperature effects of other components.

One common application is compensating for capacitors in RC filters and other RC circuits. By using an MTR resistor with a T.C. of the same magnitude but opposite slope, capacitor temperature coefficients from −100 to +150 ppm/°C can be effectively compensated to zero.

These resistors are also effective for improving the characteristics of amplifiers.

* The MAR5 resistor is qualified to Characteristic J (25 ppm/°C) and to Tolerance B (1%) of MIL-55182(E). Approved resistance range is 49.9Ω to 150Ω.

MAR resistors are ultra precision metal film resistors with the superior performance characteristics of high reliability, low inductance, and small size for a given power rating. The proprietary coatings and epoxy mold jacket provide a virtual hermetic seal in those applications where stability is critical regardless of the environmental conditions.

These superior benefits are demonstrated by the MAR5's qualification to the RNC55 size of MIL-R-55182. The MAR has successfully solved application problems in the following circuit configurations: data conversion, precision reference, input decade division, and data transmission in the instrumentation, telecommunications, aircraft and missile, and computer industries.

The utilization of MAR resistors in matched sets provides the ultimate in ratio tolerance and temperature coefficient tracking, with resistance ratio tolerance matching to ±.005% and temperature coefficient tracking as low as ±1 ppm/°C.

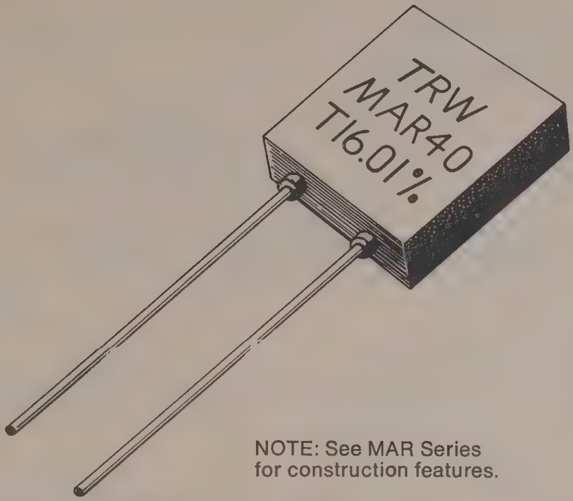
ULTRA-PRECISION METAL FILM RESISTORS

MAR40

- ☐ High power ultra-precision resistor
- ☐ Tight temperature coefficient (to ±2ppm)
- ☐ High reliability construction
- ☐ Tolerance to ±0.005%
- ☐ Rugged solid epoxy encapsulation
- ☐ Custom reliability screening available
- ☐ Matched sets



NOTE: See MAR Series for construction features.

SPECIFICATIONS

TRW Type	TC Code	Standard Temperature Coefficient		Standard Resistance Range (ohms)	Resistance Tolerance	Power Rating @ 85°C(watts)	Voltage Rating (volts)
MAR40	T16	0 ±5 ppm/°C 0 ±10 ppm/°C	0 to 60°C −55° to 125°C	20-250K (Below 50Ω not available in 0.01% Tol.)	0.005, 0.01, 0.02, 0.05, 0.1, 0.25, 0.5, 1.0	0.3	250
MAR40	T18	0 ±2 ppm/°C 0 ±5 ppm/°C	0 to 60°C −55° to 125°C	50-250K		0.3	250

The MAR40 ultra precision resistor combines the benefits of proven TRW metal film reliability, non-measurable noise, and superior frequency response with very low linear temperature coefficient characteristics, convenient radial lead design, and efficient use of printed circuit board "real estate."

The shelf and load life stability characteristics are derived from our precision metal film system. The physical size meets the military standard RNC90 dimensions. The internal construction utilizes the high reliability "end cap" technology of the MAR. The MAR40 is an effective step toward product reliability and long service free life.

The MAR40 may be specified to any custom value needed and purchased in matched sets with extremely tight ratio tolerance and close temperature tracking.

The MAR40 is a cost effective solution to ultra precision resistor circuit requirements.

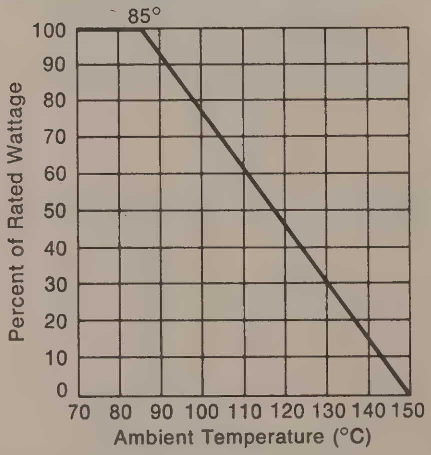
DERATING CURVE



RATIO ACCURACY AND TC TRACKING SPECIFIATIONS

Ratio to Master	TC Track 0° to 70°C	Resistance Ratio Accuracy
1:1	1 ppm	.005%
10:1	1 ppm	.01%
100:1	2 ppm	.01%
1000:1	3 ppm	.02%

The performance of most precision resistor circuits requires that the relationship of all the resistors used be held to exacting tolerances in relation to each other. This tight tolerance relationship can be accomplished in two ways. One is to specify absolute tolerances so that no resistor can deviate from any other resistor by more than twice this tolerance. The other is to specify matched sets of resistors where the relationship between resistors, rather than absolute tolerances, is tightly controlled in many designs, the absolute values are not so critical as the maintenance of a precise relationship among the set during changing ambients.

Matched resistor sets using the MAR series of resistors provide a decade or greater improvement in performance at significantly less cost than individually specified resistors. While others of our resistor products can be specified as matched sets, the MAR Series is recommended for most critical applications.

Specifying matched resistor sets requires that the resistance ratio tolerance be specified along with allowable absolute tolerance; and the temperature coefficient tracking tolerance be specified with the basic TC.

Two examples of specifying matched sets are shown below. Other design considerations permitting, it is more economical to specify ratios to a reference resistor than to each other. However, if required, the MAR series offers the inherent precision and stability for either method.

A knowledge of the availability of these two ways to achieve extreme stability offers options to the designer which may prevent overspecifying, with attendant economic considerations.

SPECIFICATION EXAMPLES

Example No. 1

Resistor	Ohms	Watts	Absolute Tolerance %	Absolute TC (ppm/°C)	Ratio Tolerance Referenced To R_1 (%)	TC Tracking Referenced To R_1 (ppm/°C)

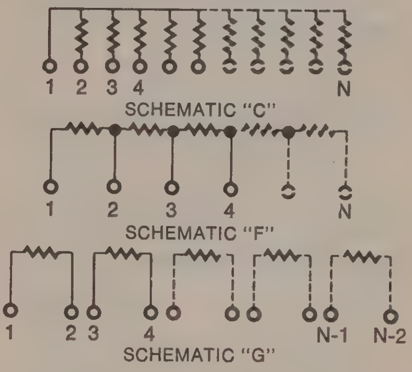
STANDARD CIRCUITS



Where precision as well as long term reliability and stabiltiy are required in a small amount of space, the conformally coated SIP is the answer. This low profile SIP resistor network exhibits all the outstanding performance characteristics inherent in TaNFilm products.

Our TaNFilm manufacturing process of sputtering Tantalum Nitride on to ceramic substrates ensures uniform temperature characteristics of all the resistors in the networks. The resistance film is then anodically passivated to improve its stability and to make it virtually impervious to environmental elements.

When you need high precision and ultimate reliability in a limited space, the TaNFilm SIP is the solution. The conformally coated SIP network can be tailored to meet special circuit configurations with multiple resistance values.

TaNFilm resistor networks are designed for use in applications requiring a high degree of reliability, stability, tight tolerance, close TCR tracking, and low noise. Our continuous feed, high vacuum sputtering process insures uniform properties from network to network. Precise state-of-the-art laser trimming enables us to easily zero in the tightest ratios. Gold-plated copper leads are thermal pulse bonded to large-area gold conductor pads on the ceramic substrate assuring the most relaible termination and long-term stability. Anodically passivated Tantalum Nitride resistor material offers performance far superior to military specifications and excellent environmental protection. Over 40 billion continuous resistor operating hours in the field without a defect-related failure clearly demonstrates the reliability of our TaNFilm product.

The versatile nature of our photo-etch process makes it readily adaptable to meet special customer requirements. Custom circuit designs and special mechanical configurations can be easily achieved with a modest set up charge. Full military screening is also available with all units.

TaNFilm resistor networks are designed for use in applications requiring a high degree of reliability, stability, tight tolerance, close TCR tracking, and low noise. The sputtering process for resistor formation has been perfected to allow a continuous feed production line under high vacuum conditions, thus, insuring uniformity of properties between networks. Precise state of the art laser trimming makes tight ratios easily achievable. The gold plated copper leads are thermal pulse bonded to large area gold conductor pads on the ceramic substrate assuring the most reliable termination and long term stability. The Tantalum Nitride resistor material is anodically passivated for excellent environmental protection and performance far superior to military specifications. Reliability has been demonstrated in field usage with over 40 billion continuous resistor operating hours without a defect related failure.

Our TaNFilm process enables us to manufacture networks containing different resistance values and still maintain the tight tolerances and tracking characteristics of networks containing only a single resistance value. The nature of our photo-etch process makes it readily adaptable to meet each individual customer's needs. Custom circuit designs and special mechanical configurations can be easily achieved with a modest set up charge while maintaining our high standards of precision and reliability.

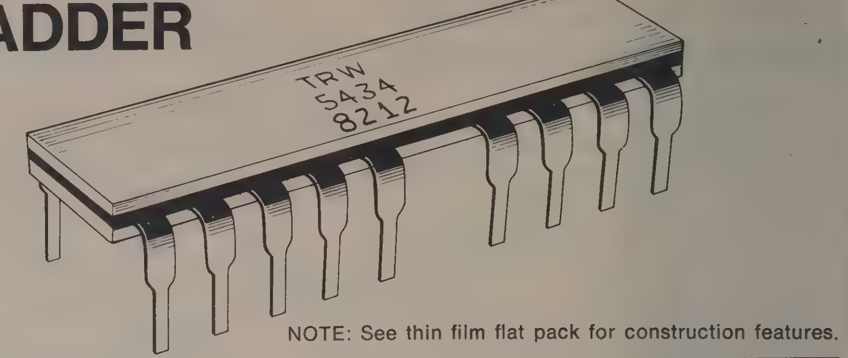
TaNFilm® R-2R LADDER

12-BIT, 20-PIN DIP

- ☐ Proven reliability
- ☐ 12 bit, ±½ LSB accuracy over 10,000 hour life
- ☐ Passivated TaNFilm for superior environmental performance
- ☐ ±122 ppm ladder accuracy over −55°C to +125°C
- ☐ Standard DIP package
- ☐ 5 standard R values



NOTE: See thin film flat pack for construction features.

The 5430 series R-2R ladder utilizes the unique characteristics of the TaNFilm process to provide the ±½ LSB, 12 bit accuracy required for precision data conversion. Our continuous sputtering process deposits Tantalum Nitride resistance film over an entire substrate of 99.5% pure alumina, ensuring virtually identical resistance temperature characteristics of all resistors in the ladder. This guarantees no degradation in ladder accuracy over the full military temperature range of −55°C to +125°C.

Anodic passivation of the resistance film results in outstanding environmental performance. More importantly, since the aging process of this film results in a slight continuation of this passivation, all resistors change at the same rate. Consequently, voltage ratios required for ladder accuracy are very stable over long term, 10,000 hour load and temperature conditions.

Large area thermocompression bonding of gold plated leads eliminates the need for fine wire bonds and provides the ultimate in strength and reliability. In addition the combination of high alumina substrate for thermal conductivity and 1.5 mil minimum resistor line width enhances reliability for the most severe applications. Reliability and stability of TaNFilm networks are proven with years of MIL-R-83401 testing and qualification.

SPECIFICATIONS

Ladder Resistance Values (R): 5K, 10K, 20K, 25K, 50K

Ladder Resistance Tolerance: ±5%

Maximum Input Voltage: 20V

Model 5435 — 500Ω

Ladder Voltage Accuracy: ±122 ppm

Application Resistor Tolerance Ratio (Note 2): 0.04%

Lead Material: Gold plated copper alloy

STABILITY

TaNFilm 12 bit ladders exhibit ±122 ppm maximum voltage ratio error after the following tests (per MIL-R-83401 except as noted):

Operating Life: 1000 Hrs. Full Load 100°C
Short Time Overload: 10 Sec. 2.5 x Rated Voltage
Thermal Shock: 10 cycles −65°C to +150°C
High Temperature Exposure: 100 Hrs. @ 125°C
Moisture Cycle, Load: 10 Days
Soldering Heat: 10 Sec. @ 260°C
Shock: 100 g's for 6 Milliseconds
Vibration: 20 g's
Terminal Strength: 4.5 Lbs.

Note 1 — Consult factory for other switch compensation.

Note 2 — Ratio matching of each application resistor to ladder output resistance. Consult factory for other accuracy requirements.

HOW TO ORDER

Model	Description
5431	5/10K, 12 bit, 20 pin DIP, R-2R ladder
5432	10/20K, 12 bit, 20 pin DIP, R-2R ladder
5433	20/40K, 12 bit, 20 pin DIP, R-2R ladder
5434	25/50K. 12 bit, 20 pin DIP, R-2R ladder
5435	50/100K, 12 bit, 20 pin DIP, R-2R ladder

Testing R-2R Ladder Networks

Conversion Accuracy Testing

TRW tests its R-2R ladders functionally by comparing the output of the DUT (device under test) with the output of a standard ladder having an accuracy of 1 ppm. The ladder networks are activated one bit at a time, starting with bit one and continuing to the LSB (least significant bit). See Figure 1. A calculator controlled scanner having low thermal mercury relays is used for the switching. The reference voltage being applied to the corresponding bit of each ladder (standard and DUT) is 10 volts. The output voltage error is measured using a calculator control DVM and is stored in the calculator memory. After all bits have been read, the plus and minus sums are found by adding the appropriate errors of all bits. Normally each of these sums must be less than one half the output of a perfect ladder with only its least significant bit energized. This is 122 ppm for 12 bit ladders. This procedure guarantees monotonicity and a worst case accuracy of less than ½ LSB.

Output Resistance Testing

The output resistance is determined by making a single measurement. All bits are connected to common and the resistance between the "OUT" terminal and common is measured. The value will be the R value of the ladder. When switch compensation is accounted for, the output reistance is ±5% of the nominal value of R.

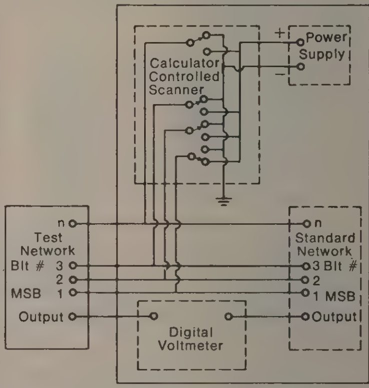

Figure 1. Conversion Accuracy Tester

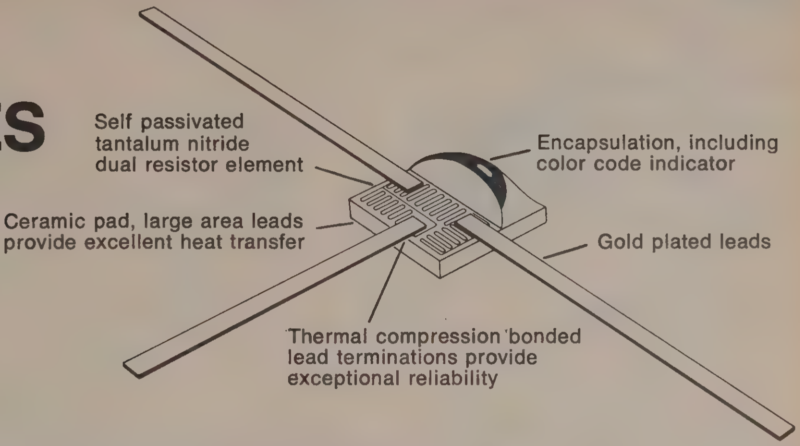
TaNFilm® SUBMINIATURE DUAL NETWORK

TaNTee SERIES

- ☐ Subminiature (0.075" x 0.075")
- ☐ Dual resistor, center lead common
- ☐ Available with custom testing
- ☐ Ultra precision — Absolute tolerance to ±1% — Ratios to: 0.1%
- ☐ Superior temperature performance Absolute T.C. to ±25 ppm/°C — T.C. tracking: 5 ppm/°C standard
- ☐ High frequency operation



Self passivated tantalum nitride dual resistor element
Encapsulation, including color code indicator
Ceramic pad, large area leads provide excellent heat transfer
Gold plated leads
Thermal compression bonded lead terminations provide exceptional reliability

SPECIFICATIONS

Resistance Range, each R: 10Ω to 10KΩ
(See chart and schematic below)
Power Rating: ¼W @ 85°C
(sum of power in both resistors)
Resistor Tolerance:
Absolute Tolerance — ±5% standard, ±1% available
Ratio Tolerance — To .1%
Moisture Resistance, ΔR: ±0.4% max.
Thermal Shock, ΔR: ±0.25% max.
(5 cycles, −65°C to +125°C)
Temperature Coefficient:
Absolute — To ±25 ppm/°C
Tracking — To 5 ppm
Load Life, ΔR: ±.5% max.
(1000 hrs. @ 70°C @ Rated Load)
Noise: −20 db max.
Short Time Overload, ΔR: ±0.1% max.
(2.5 x rated voltage for 5 seconds)

NOTE: TaNTee resistors meet the performance requirements of MIL-R-83401, characteristic H

The TaNTee Series of TaNFilm resistor networks provide a miniature, two-resistor network adaptable to many circuit requirements. The tanalum nitride film resistors are deposited on a 25 mil thick ceramic chip .075" x .075", and are protected by a rugged epoxy coating. Gold plated copper leads are bonded to termination pads on the ceramic chip, resulting in a strong, reliable lead connection.

Tantalum nitride is an extremely stable metal film resistor material capable of high operating power levels and also exceptional environmental performance. The TaNTee dual resistor's physical size and construction make it ideally suited for high frequency applications. The excellent TC tracking of the two resistors on the chip provides a very stable voltage ratio, which is critical in many applications.

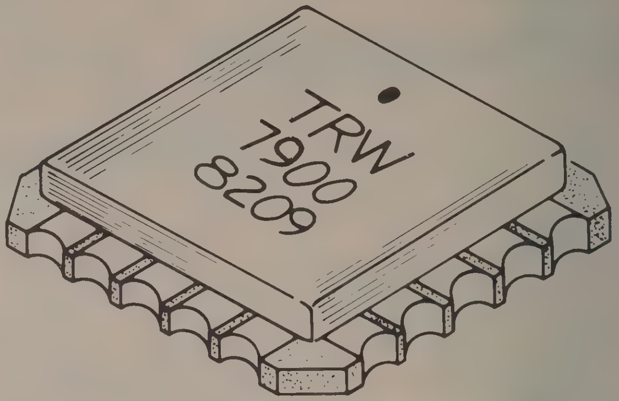
TaNFilm® CHIP CARRIER RESISTOR NETWORKS

- ☐ Increased component density
- ☐ Ideal for vapor phase reflow soldering
- ☐ Best tolerances: 0.1% absolute — 0.02% ratio
- ☐ Superior temperature performances: Absolute T.C. to ±25 ppm/°C — Tracking 5 ppm/°C standard
- ☐ Custom schematics readily available
- ☐ Meets JEDEC standard for Type 'C' package



SPECIFICATIONS

Resistance Values: 50Ω to 50KΩ standard; up to 100KΩ on special order

Resistance Tolerances: ±.1%, ±.5%, ±1%, ±2%, ±5%

Temperature Coefficient of Resistance: ±25 ppm/°C, ±50 ppm/°C, ±100 ppm/°C, ±300 ppm/°C

TCR Tracking: 5 ppm/°C

Temperature Range: −55°C to +150°C

Noise: Less than −25 dB

Power Rating @ 70°C: .1 watt/resistor, .5 watt/network

Meets JEDEC standard for type 'C' package

Terminations: Gold over nickel over copper

Substrate Material: 99.5% pure alumina ceramic

Construction: Ceramic sandwich/epoxy encapsulant

Custom circuits and special testing available

Contact factory for any special features required.

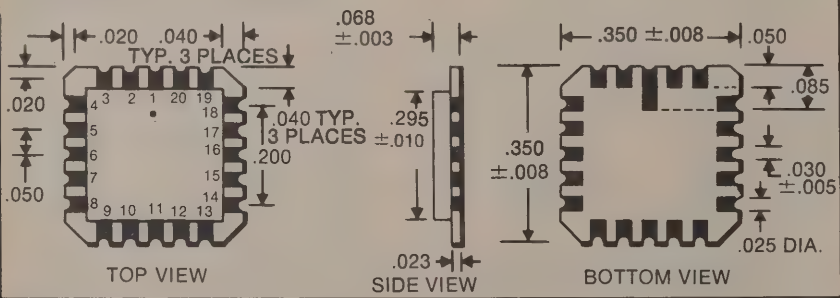
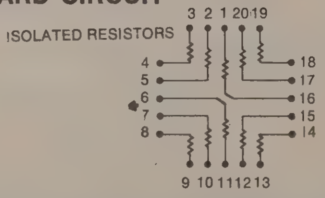
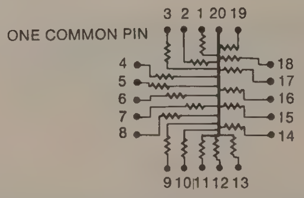
DIMENSIONS — INCHES



STANDARD CIRCUIT





The TRW TaNFilm chip carrier network offers higher lead density, increased component count, lower installed resistor cost, better reliability, and is ideal for use with the latest production technique — vapor phase reflow solder process. In addition, the TaNFilm leadless chip carrier network provides all the unique qualities of our other TaNFilm package configurations. Testing has demonstrated performance exceeding MIL-R-83401 Characteristic H.

The proven TaNFilm manufacturing process enhances reliability through elimination of wire bonds. Precise state-of-the-art laser trimming provides close tolerances and tight ratios. The TaNFilm process enables us to manufacture custom circuit configurations and multiple resistance values without sacrificing the tightest tolerance and tracking characteristics of precision networks. The Tantalum Nitride resistor material is passivated for environmental protection surpassing military requirements and guaranteeing exceptional ratio stability over the full range of military environments.

For applications requiring a high degree of reliability, stability, accuracy and low noise, plus advantages of new resistor packing, specify the TRW leadless chip carrier configuration resistor network.

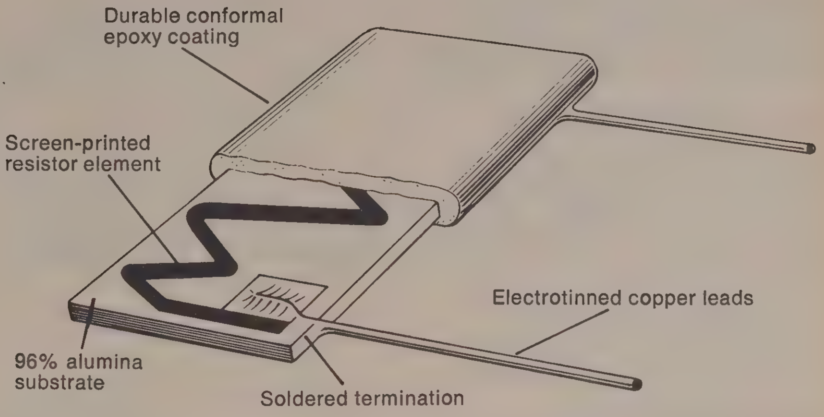
HIGH VOLTAGE THICK FILM RESISTORS

RB SERIES

- ☐ 1 watt to 5 watts
- ☐ 1 ohm to 500 megohms
- ☐ 10 KV to 25 KV
- ☐ 5% to 20% tolerance
- ☐ TCR of ±200 ppm/°C



Durable conformal epoxy coating
Screen-printed resistor element
Electrotinned copper leads
96% alumina substrate
Soldered termination

FEATURES

- ☐ TRW proprietary non-noble thick film technology
- ☐ Space saving thin body design
- ☐ PC board compatible
- ☐ High voltage stability
- ☐ Low inductance design
- ☐ Backed by TRW high volume production capability

APPLICATIONS

- ☐ High voltage power resistors for use in:
  - Power supplies
  - Voltage multipliers
  - Electrostatic equipment
  - Copiers
- ☐ Low resistance - low inductance power resistors

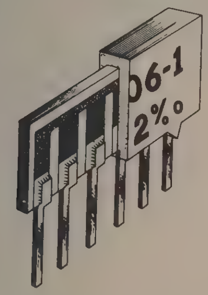
CUSTOM THICK FILM CIRCUITS

- ☐ High reliability
- ☐ Major size reduction compared to discrete components
- ☐ Cost effective in large quantities

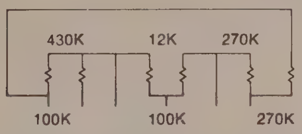
RESISTOR-ONLY CIRCUITS



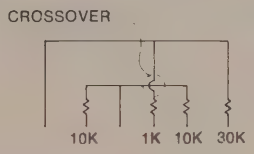
.350-in. SIP

CIRCUIT VARIATIONS:

Overall the .350-in. SIP is the best choice for custom network requirements. A wide variety of circuits is possible with the extra "real estate" available on this size, including circuits requiring crossovers. Remember, however, that crossovers add significantly to the manufacturing cost of a network.



430K
12K
270K
100K
100K
270K



CROSSOVER
10K
1K
10K
30K

Straightforward variations to standard circuits of the .195-in. SIP are feasible, such as different common location(s), missing resistors, and multiple resistances.

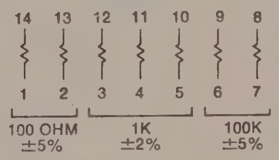
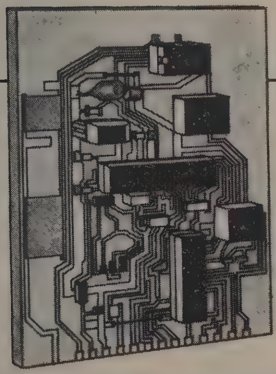
ALL 5%



14 13 12 11 10 9 8
1 2 3 4 5 6 7
100 OHM ±5%
1K ±2%
100K ±5%

ADDITIONAL FEATURES:

- Top Stamping — to customer specification; one 8-character line
- Missing Pins—removed external to SIP molded package, but within standoff profile
- TCR — ±150PPM
- Ratio Matching — ±2% between specified resistor pairs — ratios not to exceed 20:1



COMPLEX CUSTOM FUNCTIONAL CIRCUITS

Custom functional circuits are most applicable where size reduction and reliability are prime factors. Generally, outboard components (diodes, transistors, ICs and capacitors) are surface mounted. Resistors and conductors are screen printed and fired at 900 to 1000°C directly to the ceramic substrate.

TRW circuit features include:

- High-conductivity, leach-resistant copper conductors
- 10-ohm to 10-megohm/square resistors
- Stability characteristics as in R-only circuits above
- Cost effectivity of non-noble Metal Glaze™ thick film

GENERAL-PURPOSE LOW-POWER MOLDED WIREWOUNDS

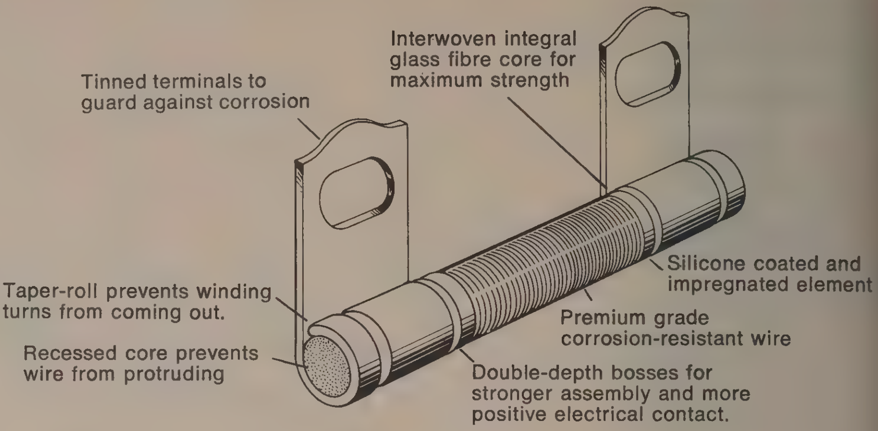
AUTOMOTIVE AND APPLIANCE POWER WIREWOUNDS

AW SERIES



Tinned terminals to guard against corrosion
Interwoven integral glass fibre core for maximum strength
Taper-roll prevents winding turns from coming out.
Recessed core prevents wire from protruding
Silicone coated and impregnated element
Premium grade corrosion-resistant wire
Double-depth bosses for stronger assembly and more positive electrical contact.

- ☐ Appliance applications include food mixers, coffee makers, electric and electronic ranges, electric blankets, actuating heaters for bi-metal switches, toasters and deep fryers
- ☐ Automotive applications include horns, voltage regulators, ignition ballasts, instrument gauges, spark suppressors and windshield wipers

SPECIFICATIONS

RESISTANCE RANGE

0.1 ohm minimum to 1000 ohms/in. of active length, or inside terminal dimension.

POWER RATINGS

4.5 watts/in. between mounting centers on the standard AW, and 6 watts/in. between mounting centers on the high-wattage AW resistor. Higher wattages are available on low resistance values with special windings.

TOLERANCE

±10% tolerance is standard. Other tolerances are available on special orders.

DESIGN AND CONSTRUCTION

The resistance elements of AW resistors are uniformly and tightly wound on glass fiber cores using premium quality wire. Tinned steel or tinned brass terminals are secured to the element by automatic assembly equipment. The high degree of automation used in manufacturing this resistor allows you to use a high-quality wirewound unit at low cost.

TERMINALS

Standard AW resistor terminals are 11/32 in. x .015 in. tinned steel or tinned brass. High-wattage AW resistor terminals are 11/32 in. x .020 in. tinned steel or tinned brass.

Over 50 styles of terminal mounting holes are tooled and immediately available. Any of these can be furnished with one or both mounting holes omitted and in any resistor length, within limits shown, from standard tooling. Other mounting hole sizes or terminal configurations can be made to your specification at a nominal cost.

STAMPING

Resistance value is stamped on both sides of the left terminal in large numbers.

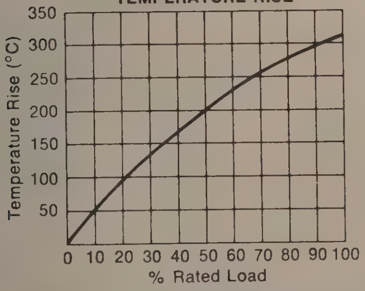
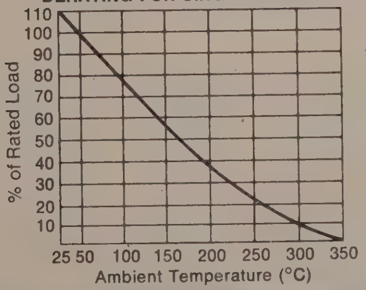
* Adjustable resistors are identified by adding the letter "A" to the designation of standard resistors.

TEMPERATURE RISE



DERATING FOR SINGLE RESISTORS



HOW TO ORDER

Sample Part No.:

2D - 12A - 4707 - 5%
FRWA - 23 - 470K - 10%

TRW Type
A = Adjustable

Power
23 = 70 watts (See specification chart for other power ratings)

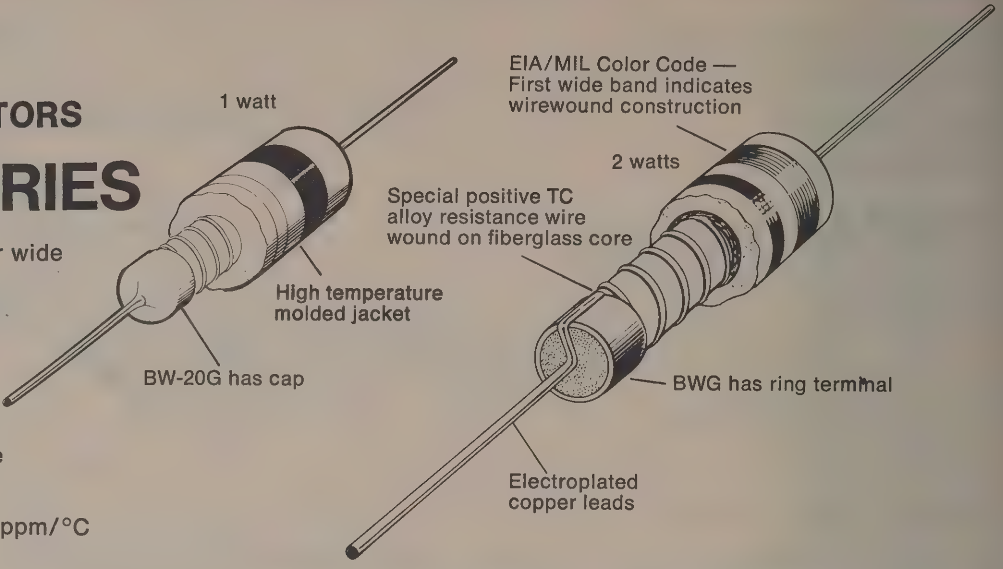
Resistance Value
Expressed in ohms
(Standard EIA/MIL values)

Tolerance
±5% standard for fixed resistors,
±10% standard for adjustable and tapped

WIREWOUND TEMPERATURE SENSING RESISTORS

BWG SERIES

- ☐ Excellent linearity over wide temperature span
- ☐ Fast response time
- ☐ Small size
- ☐ Economical cost
- ☐ 1 watt, 2 watts
- ☐ ±5%, ±10% tolerance
- ☐ 0.1 ohm to 300 ohms
- ☐ TCs as high as +5500 ppm/°C



1 watt
EIA/MIL Color Code — First wide band indicates wirewound construction
2 watts
Special positive TC alloy resistance wire wound on fiberglass core
High temperature molded jacket
BW-20G has cap
BWG has ring terminal
Electroplated copper leads

SPECIFICATIONS

Temperature Coefficient		Available Resistance in Ohms*	
PPM/°C	%/°C	BW-20G (1 watt)	BW (2 watts)
4500	0.45	0.10 to 100	0.20 to 300
5500	0.55	0.10 to 43	0.10 to 110

* As supplied "cold" resistance values — measured at room ambient temperature.

Temperature Range: −55°C to +150°
Power Rating: 1 watt @ 50°C for BW-20G, 2 watts @ 70°C for BWG
Standard Tolerance: ±5%, ±10%
Maximum Continuous Working Voltage: $E = \sqrt{PR}$
Minimum Dielectric Withstanding Voltage: 700V for BW-20G, 1000V for BWG
Minimum Insulation Resistance: 10,000 Meg Ω when dry, 100 Meg Ω when wet
Size Equivalent to RS344: CRU1 for BW-20G, CRU2 for BWG
Size Equivalent to MIL-R-11: RC-20 for BW-20G, RC-32 for BWG

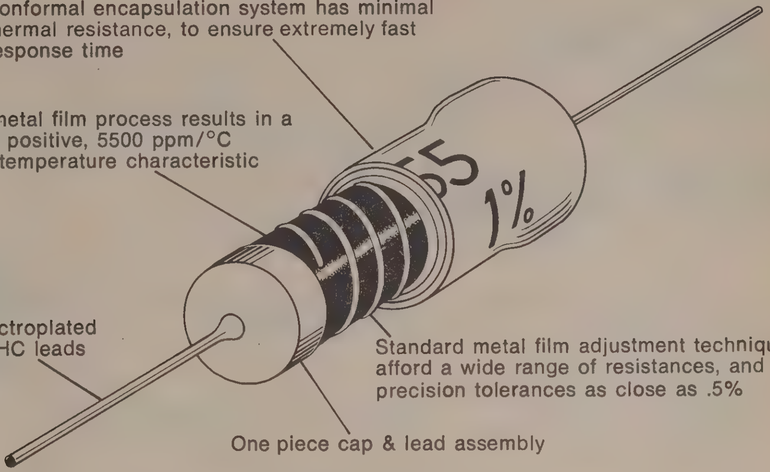
THIN FILM RESISTANCE TEMPERATURE SENSING ELEMENT

TD SERIES

- ☐ Proven metal film reliability
- ☐ Fast thermal response
- ☐ Positive temperature coefficient
- ☐ Close tolerance
- ☐ Superior linearity
- ☐ Ultra miniature



Conformal encapsulation system has minimal thermal resistance, to ensure extremely fast response time

Exclusive metal film process results in a very linear, positive, 5500 ppm/°C resistance temperature characteristic

Electroplated OFHC leads

Standard metal film adjustment techniques afford a wide range of resistances, and precision tolerances as close as .5%

One piece cap & lead assembly

SPECIFICATIONS

Resistance Range at 25°C: TD50 - 100Ω to 2KΩ, TD55 - 100Ω to 3KΩ

Temperature Coefficient: +5000 ±100 ppm/°C at 25°C; +6000 ±120 ppm/°C at 100°C

Tolerance at 25°C: ±.5%, ±1% or ±2%

Oper. Temp. Range: −55°C to +175°C

Interchangeability Accuracy: ±.9°C @ 25°C for .5% tolerance — ±1.8°C @ 25°C for 1% tolerance — ±3.6°C @ 25°C for 2% tolerance

Accuracy Limits: ±1.5°C for .5% tolerance (−50°C to +100°C) — ±3°C for 1% tolerance (−50°C to +100°C) ±6°C for 2% tolerance (−50°C to +100°C)

Retracking Error: <.05% of nominal (−55°C to +175°C)

Resistance Ratio: R @ 125°C/R @ 25°C =1.57

Linearity: <1.2% maximum deviation from best straight line fit over any 100°C interval between −55°C and +175°C

Thermal Time Constant: TD50 - 3.7 sec. maximum, TD55 - 5.5 sec maximum. (Time to achieve 63.2% of an applied step change in still air)

Dissipation Constants: TD50 - 4.1 mW/°C, TD55 - 6.2 mW/°C (Power required to raise sensor temperature 1°C in still air at 25°C)

ENVIRONMENTAL PERFORMANCE

Type of Test	Maximum ΔR	Typical ΔR
Thermal Shock (5 Cycles, −55°C to +175°C)	.068%	.040%

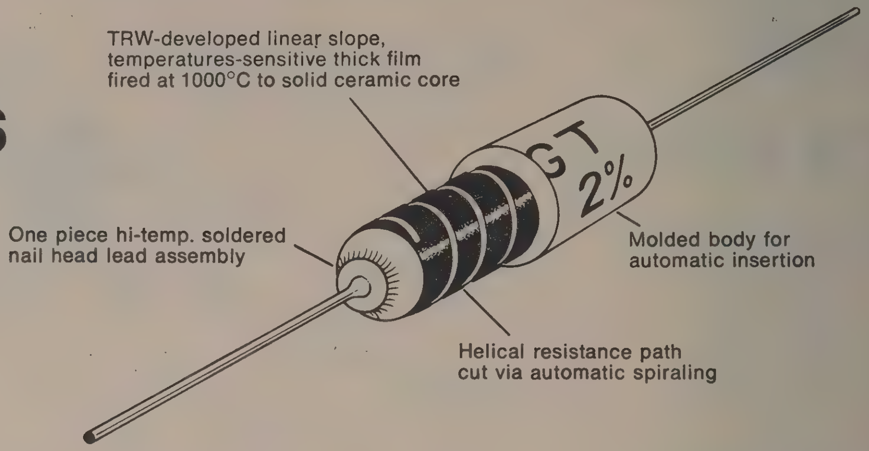
THICK FILM TEMPERATURE SENSING RESISTORS

RGT SERIES

- ☐ Excellent linearity over wide temperature span
- ☐ Fast response time
- ☐ Small size
- ☐ Economical cost



TRW-developed linear slope, temperatures-sensitive thick film fired at 1000°C to solid ceramic core

One piece hi-temp. soldered nail head lead assembly

Molded body for automatic insertion

Helical resistance path cut via automatic spiraling

SPECIFICATIONS

Linearity: Typically less than 1.2% deviation/100°C

Time Constant: 2.9 seconds in still air for Type 2 sensor, 7.4 seconds for Type 1

Operating Temperature −55° to +175°C (−67° to +347°F)

Negative TC of ≅ .3%/°C

Stable Metal Glaze™ Element: New family of glazes. Standard glaze-on-ceramic construction

Nominal 1K and 10K Resistance Values at 25°C: In 10%, 5%, 2% tolerances (Other values available for sufficient volume)

Proven Manufacturing Line: Now in 18th year. Glazes produced in TRW's own facility

HOW TO ORDER

Sample Part No.:

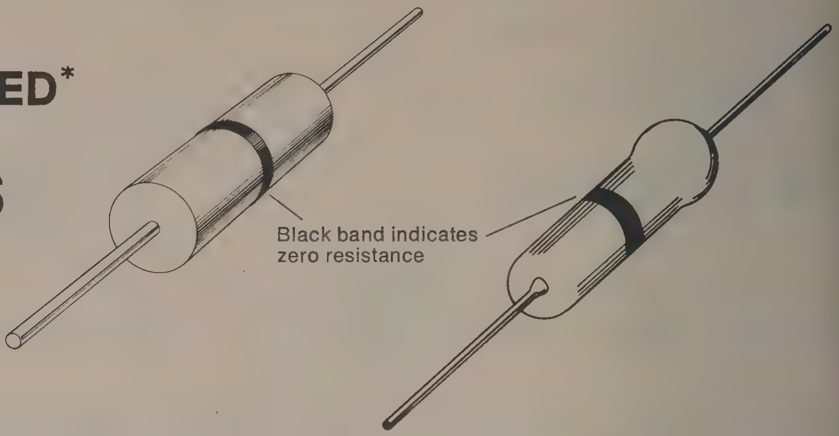
MVX1 - 510M - 10%

TRW Type — See specification table for types and power ratings available.

Resistance — 10K ohms to 1000M ohms in standard EIA/MIL values. See specification table for exact range.

Tolerance — ±20%, ±10% or ±5%. See specification table for availability.

MOLDED AND CONFORMAL COATED* ZEROHM JUMPER WIRES



- ☐ Standard ¼-watt size
- ☐ Supplied on lead tape and reel for automatic insertion
- ☐ Less than 0.01 Ohm

SPECIFICATIONS

Maximum Resistance: 0.01 ohm

Lead Material: Leads are copper with solder alloy coating

Body Material: Electrical grade, high performance, coating and molding compounds

Minimum Insulation Resistance: Dry, 10,000 megohm; Wet, 100 megohm

Minimum Dielectric Withstanding Voltage: Atmospheric, 500V RMS; Reduced, 325V RMS

Current Rating: 25 amps at 25°C, derating to 0 amps at 150°C

APPLICATIONS

Jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a PC board.

Generally they are used for the following reasons:

- Inability to connect two points on a PC board due to other circuit paths which must be crossed over.
- An after-the-fact design change that requires new point connections.
- Circuit tuning by changing point connections.

TRW's jumper wires offer a quick simple solution to these problems. They are especially suited for automatic machine insertion on lead tape, and are available in all packaging styles including pre-cut and formed leads for manual insertion.

metal foil resistor NICROCER® process

very high precision and stability

MIL QUALIFICATION TO MIL–R–55182/9 (RNC90Y)

FEATURES

- VERY TIGHT TOLERANCES ±0.005% to ±1% – Matching to 0.002%
- VERY LOW TEMPERATURE COEFFICIENT
  typical < ±3 ppm/°C (−55°C to +155°C) ± 1 ppm (0°C to + 60°C)
  tracking to 0.5 ppm/°C
- VERY HIGH STABILITY < 25 ppm/year or *< 50 ppm/3 years (shelf life)*
- *NEGLIGIBLE RISE TIME approx. 1 X* 10^{-9} sec.

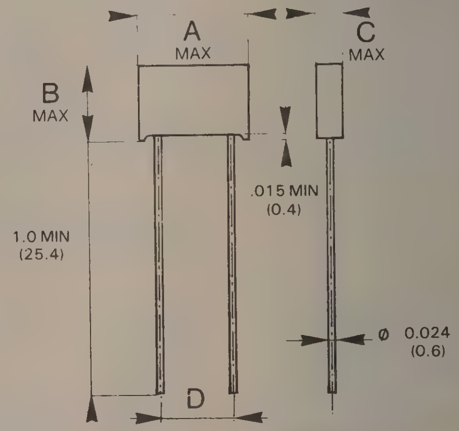
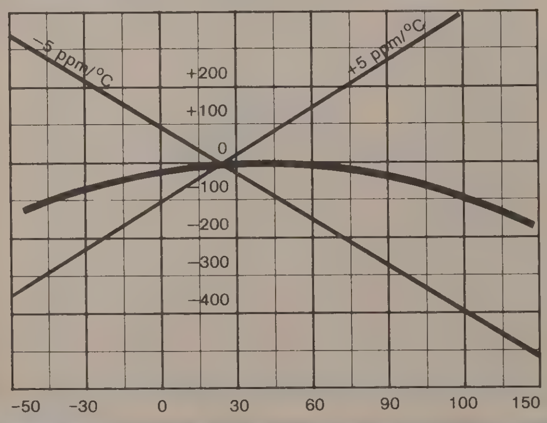
RCK06	1.200 (30.5)	.531 (13.5)	.256 (6.5)	.900 (22.86)



TEMPERATURE COEFFICIENT $\frac{\Delta R}{R}$ ppm



The T.C. of RCK resistors is always better than ± 5 ppm/°C in the temperature range −55°C to +155°C.

More generally, the T.C. is positive towards the very low temperatures, typical values +2.2 ± 2 ppm/°C for −55°C to +25°C.

It is negative towards the high temperatures, typical value −1.8 ± 2 ppm/°C for +25°C to +125°C.

For temperature variations of about 20 to 30°C from the 25°C ambient temperature, the T.C. is very low.

In the temperature range 0°C to +60°C it can be reduced to a value below ± 1 ppm/°C.

For a group of resistors, T.C. matching can be made to better than ± 0.5 ppm/°C.

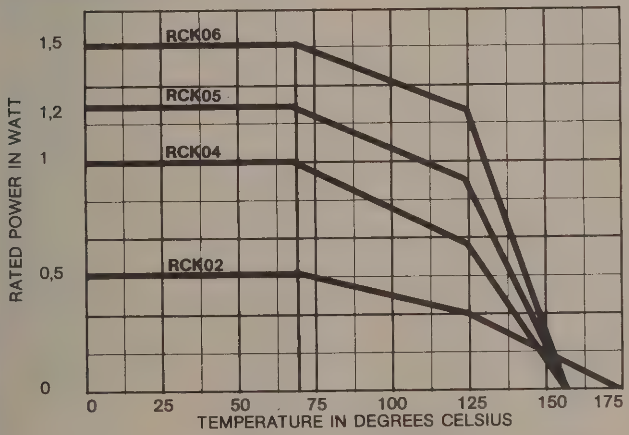
POWER DERATING CHART



POWER DERATING

The power ratings listed in the tables are based upon achieving the specified stabilities at maximum ambient temperatures of 70°C. If a resistor is to be used at higher ambient temperature, the power should be derated linearly to zero per the chart. To insure maximum stability, this power curve should be derated by 25% for tolerances to 0.05%, by 50% for tolerances to 0.01% and by 75% for tolerances of 0.005%.

MIL QUALIFICATION TO MIL–R–39005 AND MIL–R–93

SPECIFICATIONS

MINIMUM VALUES

Generally 0.1Ω for 1% and 0.5% and 10Ω for 0.1% and tighter.

TOLERANCES (±)

Standards are 0.005%, 0.01%, 0.02%, 0.05%, 0.1%, 0.5% and 1% depending on style and value.

TEMPERATURE COEFFICIENTS

± 5 ppm/°C standard for 10Ω and above. Higher T.C.'s on low ohmic values.
±1 ppm/°C available. TC match to ±0.5 ppm/°C.
High T.C.'s up to + 6000 ppm/°C are available.

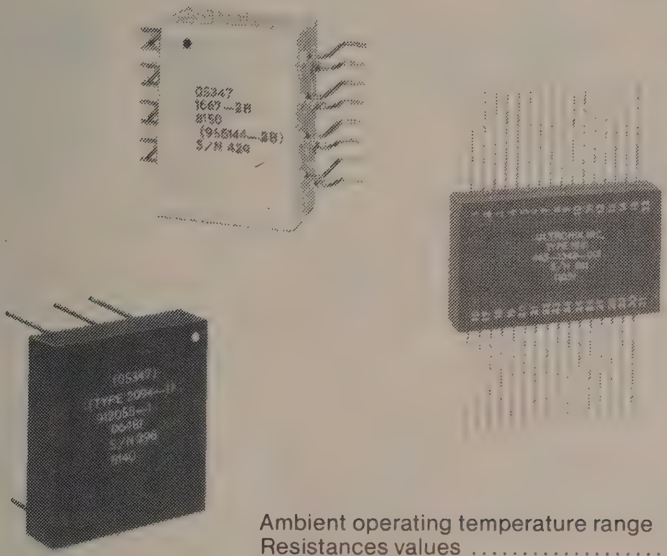
wirewound networks and custom requirements

CALL FOR OUR APPLICATIONS ENGINEERS TO ASSIST YOU WITH YOUR DESIGN REQUIREMENTS

CUSTOM DESIGNED NETWORKS AND MATCHED SETS



Network quality is determined by the precision of its individual resistors plus packaging and mounting techniques. **ULTRONIX** offers a unique background of experience, reliability, data, manufacturing and testing skills for wirewound resistor networks. For a sample of this ability, submit your next network requirement for evaluation by **ULTRONIX** engineers.

Matched resistor sets and custom designed networks are available from Ultronix for equipment design requiring close ratio matching and temperature tracking of resistors.

Our networks are used in a wide variety of applications such as communications satellites, precision instrumentation, aircraft controls, etc.

GENERAL SPECIFICATIONS AVAILABLE

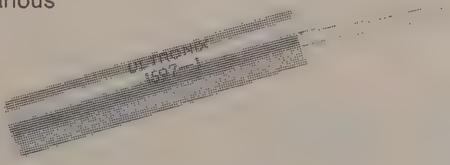
Ambient operating temperature range	−55°C to125°C
Resistances values	0.1 ohm to 40M ohm
Absolute resistor tolerances	to ±0.005%
Matched resistance ratios	to ±0.001%
Temperature coefficient match and tracking between resistors within	±1 ppm from 0°C to +85°C

Low reactance and rise times as low as 0.02 microseconds.
AC resistance match at frequence determined by user.

CUSTOM WIREWOUND TEMPERATURE SENSORS

Ultronix temperature sensors are available with temperature coefficients from −50 to +6000 PPM/°C. Various alloys and metals are used to obtain the required range of resistance change with temperature for trimming, tracking, compensation and matching. These units may be in metal housings such as brass, aluminum, or stainless steel, or molded in various epoxies or silicone.

TCR PPM/°C		TCR PPM/°C	
25°C to 125°C	-55°C to 25°C	25°C to 125°C	-55°C to 25°C
80 ± 20	80 ± 20	1400 ± 200	1500 ± 200
100 ± 20	100 ± 20	2600 ± 200	2600 ± 200
140 ± 30	140 ± 30	3000 ± 150	3000 ± 150
180 ± 30	180 ± 30	3200 ± 300	3200 ± 300
290 ± 30	290 ± 30	3500 ± 300	3500 ± 300
400 ± 40	380 ± 40	4500 ± 400	3900 ± 300
700 ± 200	700 ± 200	5000 ± 500	4000 ± 500
850 ± 80	850 ± 80	6000 ± 300	5000 ± 300
1000 ± 100	1000 ± 100		



The accompanying table lists standard TCR's for readily available alloys and metals. Most alloys show some non-linearity as can be noted by the TCR differences above and below 25°C. However, all alloys can be considered linear over narrow spectrums.

ULTRONIX STERNICE

enameled wirewound power resistors

ULTRONIX inc SFERNICE

P.O. Box 1090
Grand Junction
Colorado 81502

(303) 242–0810

As a result of more than 40 years of experience and continuous improvements the RWM Series of resistors features proven reliability either in direct or alternating current.

The high quality of the RWM results primarily from the use of a proprietary Sfernice enamel fired at high temperature and which is free from any compound that would corrode the resistive wire.

- **HIGH SPECIFIC DISSIPATION**
- **HIGH RELIABILITY LEVEL**
  - **Fire proof**
  - **Excellent endurance**
  - **Conformal vitreous enamel**
  - **Great mechanical strength**
  - **Good environmental protection**
  - **All welded construction**
- **LOW OHMIC VALUES**

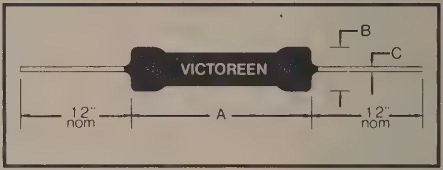
VICTOREEN Carbon & Metal Film Resistors

From general purpose thru extreme precision, Victoreen now offers low-priced Carbon and Metal Film Resistors.

In addition to our broad based stock, custom stocking plans are available to fit your needs.

VCF-125,250,500 (Carbon Film)

- Wide resistance range: 1 ohm to 10M ohm
- Tolerances available: 1, 2 & 5%
- Packaging variety: Bulk, Tape & Reel, Ammo Pack
- Cut and form leads available as required
- Custom stocking plans available
- Epoxy conformal coated



Dimensions (in inches)

Type	A Max Length	B Max O.D.	C Nominal

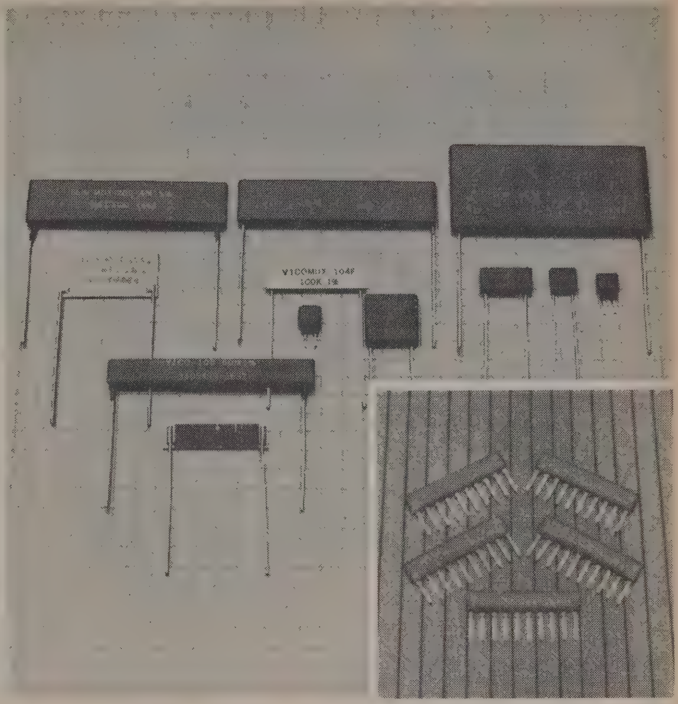
VICTOREEN Slim-Mox and S.I.P. Networks

Slim-Mox Resistors are ideal for applications where high voltage/high impedance or high density packaging are benefits to the designer.

S.I.P. Networks are available from 47 ohm to 2.2 megs, with stocking plans available to fit your needs.



Slim-Mox

- Stocking values available
- Wide resistance range to 50,000 Meg ohm
- Voltage capability to 18 KV
- Power rating to 5 Watts
- Tolerances from 0.5 to 20%
- Epoxy conformal coated

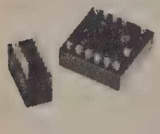
STANDARD AND CUSTOM RESISTANCE NETWORKS

Binary Networks and BCD Ladders



Besides designing completely custom precision networks to your most demanding specifications, Vishay offers standard binary R-2R ladder networks in 4-bit to 16-bit configurations (voltage-fed) with resistance values from 1 ohm to 50KΩ; 2R to 100K . Three basic package styles (nominal dimensions): **Profile 500,** 0.750'' (19.05 mm) W x 0.500'' (12.70 mm) H. **Profile 375,** 1.230'' (31.24 mm) W x 0.365'' (9.27 mm) H. Lengths dependent on number of bits: min. 0.700'' (17.78 mm) for 4-bit Profile 500 to 2.14'' (54.35 mm) for 16-bit ladder; min. 0.730'' (18.54 mm) for Profile 375 to 2.59'' (65.78 mm) for 15-bit package. **Profile 200,** 1.0'' (25.4 mm) W x 1.0'' (25.4 mm) L x 0.200'' (5.08 mm) H only.

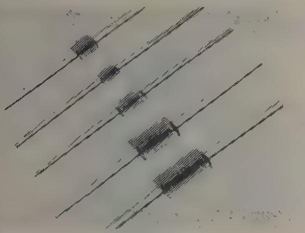
VISHAY-ANGSTROHM

METAL FILM RESISTORS

Hermetically Sealed per MIL-R-55182 Characteristics C and E
Hermetic Glass-to-Metal Seal — Failure Rates M (1%) thru S (0.001%)



FEATURES

- High stability
- Hermetic enclosure
- Inert gas environment
- In accordance with MIL-R-55182, Styles RNR and RNN
- Extended life and reliability
- 1/10, ⅛, ¼, ½ watt sizes (5 case sizes)

APPLICATIONS

Aerospace, military, oceanography . . . wherever the application or environment demands the ultimate in resistor reliability, Angstrohm's hermetically sealed metal film resistors are unquestionably first-choice. The HN glass-to-metal hermetic seal protects the resistance element from virtually any adverse environmental influence, and will withstand in excess of 3,000 p.s.i. external pressure without leakage.

SPECIFICATIONS

MIL-Specifications: RNR/RNN style resistors are designed to exceed the requirements of MIL-R-55182 for characteristics C and E.

Power Rating: All RNR/RNN resistors are based on full rated load at an ambient of 125°C.

Resistance Tolerances: The standard resistance tolerances are ±1.0% (F), ±.5% (D), and ±.1% (B) per Q.P.L. 55182. Consult factory for tighter tolerances and special matching.

Resistance Values: See Table 1 for range of resistance values.

Derating: For ambients above 125°C, units derate linearly to zero at 175°C.

Applied voltage shall not exceed $\sqrt{PR}$. See Table 1.

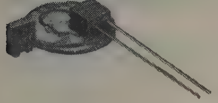
Series AF-102 Precision Metal Foil Resistors to MIL-R-55182-RNC90Y



Angstrohm's new Series AF-102 metal foil resistors provide a new standard of performance in the precision resistor field. They are designed to meet the most stringent environmental specifications without any degradation of performance, and feature a proprietary new lead termination anchor design that has proved to be the most rugged in the industry.

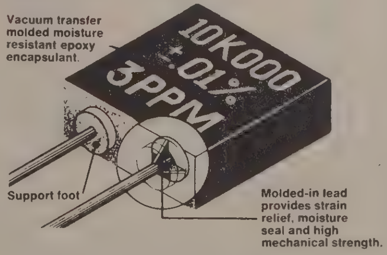
Electrical performance meets or exceeds the requirements of MIL-R-55182 while providing much 'flatter' temperature coefficient characteristics than comparable resistors. Exceptionally low thermal E.M.F.'s are a result of the AF-102's unique lead configuration which also results in low distributed capacitance and inductance. The molded-in stand-off feet protect the resistor element from high soldering temperatures.

SPECIFICATIONS

Power Rating	.3 Watt @ 125°C .6 Watt @ 70°C
Voltage	300 VDCW max.
Operating Temperature	−65°C to +175°C
Resistance Range	1Ω to 100KΩ*
Resistance Tolerance	To ± .005%
Temperature Coefficients (TCR)	±5ppm/°C ±3ppm/°C ±2ppm/°C
TCR Tracking	To ½ ppm/°C
Shunt Capacitance	<0.5pF
Inductance	<.08μH
Typ. Rise Time	1nS @ 1KΩ
Thermal EMF	<.3μV/°C
Voltage Coefficient	<±.0001%/VoltΔR
Weight	.6 gm

*1Ω to 20KΩ standard. 20KΩ to 100KΩ on special order.

CONSTRUCTION



Vacuum transfer molded moisture resistant epoxy encapsulant.
10K000
±.01%
3PPM
Support foot
Molded-in lead provides strain relief, moisture seal and high mechanical strength.

VISHAY-ANGSTROHM

Angstrohm's broad line of vitreous enameled power rheostats is designed to provide exceptional reliability through the application of the most modern manufacturing techniques and sophisticated materials. These same techniques have resulted in a line of power rheostats that feature a very compact size for their dissipation rating. Furthermore, many standard value rheostats are available for off-the-shelf delivery while special devices are available with short delivery cycles. Rheostats are also available in tapered windings, in tandem assemblies, with off positions and with special shaft assemblies.

U These components have four section bobbins wound in opposition. Inductance may be further reduced by use of bifilar winding. Order as Suffix U.

**All resistors have Thermal EMF of 1.8 μV/°C with respect to copper at 0°C unless specified otherwise in this chart.

Note A: For certain ohmic values, drift rates are considerably lower than specified. Please contact the Applications Engineering Department for complete information.

Other features available include tolerance matching to 0.01% on MX and LR series, 0.002% on other ranges.
Temperature Coefficient matching to 1ppm°C.
Inductance can be reduced by reversal of winding at half turns point. Order as Suffix T on types AX, PX, PC and LT.
Types AX125 and PC125 are type approved to BSC ECC 40 301-001 and -004 respectively.
All Dimensions in inches.

POTENTIOMETER
CAPITAL OF THE WORLD

FROM LOW-COST CARBON SINGLE-TURNS TO SEALED PRECISION MULTI-TURNS . . . MURATA ERIE HAS THEM ALL!

Murata Erie manufactures one of the broadest potentiometer lines in the world. For commercial and industrial applications—single-turn trimmers in carbon, cermet and conductive plastic in all popular resistances, mounting configurations and power ratings from 1/10 watt to 3/4 watt. For instrumentation and other precision applications—single- and multi-turn trimmers with from 1 to 25 turns full range, ¼ watt to 1 watt ratings and standard square, rectangular and circular configurations.

For complete technical details write to
Murata Erie North America, Inc.,
1148 Franklin Road, SE,
Marietta, Georgia 30067 or call
404-952-9777.

† A rheostat is a two-terminal variable resistor. When both ends of the resistance element and the slider contact (three terminals) are used, it's called a potentiometer. By tradition, nevertheless, power variable resistors are often referred to as rheostats, no matter how used.

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

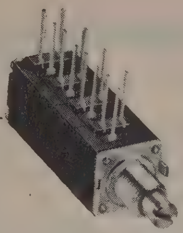
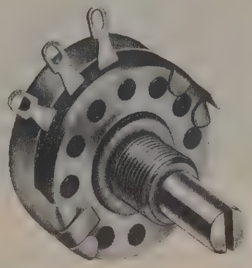
Series 70 MOD POT® – Modular design innovated by Allen-Bradley offers almost unlimited combinations: single, dual, triple or quadruple sections. Options include PC or solder lug terminals, variety of switches, vernier drives, concentric shafts, hot-molded composition, cermet or conductive plastic resistance elements.



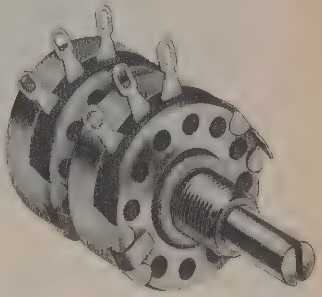
Series 72 MOD POT® – Similar to Series 70, except the bushing and shaft are non-metallic. Available in single or dual combination only.

Series 73 MOD POT® – Similar to Series 70, except the bushing is of a more economical design. Available in single, dual, triple or quadruple sections.

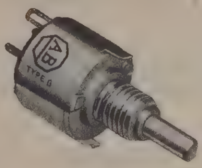
Type J (RV4) — Standard of the industry for quality. Hot-molded composition, 50 ohms to 5 megs, ±10% and ±20% (special values to 1000 megs available), 2.25W at 70° C, single, dual, triple sections available. Switch for single or dual sections.



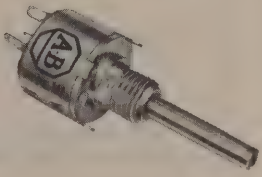
Type EJ – Extra long life version of the Type J with rotational life exceeding one million rotations, single or dual configurations. Slip clutch available.



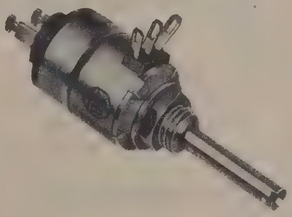
Type G (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section available with or without SPST switch.



Type W (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section.

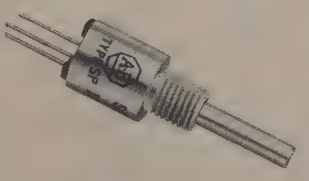


Type WR – Radial-lead version of Type W. Available with or without switch. Switch versions offer contacts that close at start of clockwise rotation (TYPE WRS) or with switch with contacts that close at start of counter-clockwise rotation (TYPE WRH).

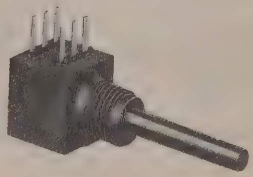


Type WP – Pin-terminal version of Type W. Suited for printed circuit board mounting.

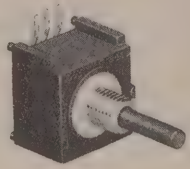
Type SP – Cermet, 50 ohms to 1 meg, ±10%, 1.0W at 70° C, single section. Only 3/8 inch diameter.



Type M – Miniature conductive plastic. 100 ohms to 1 meg., ±20%, 0.1W at 40° C, single and dual sections available. Switches optional. 5 terminal options. Non-metallic case, bushing and shaft.



Type 2000 – Designed cost-effective in conductive plastic. 250 ohms to 1 meg, ±20%, 0.5W at 70° C single section. 3 terminal options. Sealed for board washing. Non-metallic case and shaft. Choice of bushing.



Standard options for most types include linear and non-linear tapers, a variety of shafts, bushings, shaft endings, shaft lengths, and hardware.

Types J and the multi-section MOD POT® with composition tracks are well suited for attenuator applications.

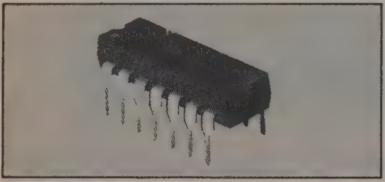
BOURNS® ATTENUATORS

Bourns offers an extensive line of fixed, variable and switchable attenuators. All Bourns attenuators are available in both standard and custom configurations. Our Engineering Departments can custom design special attenuators for your special applications.

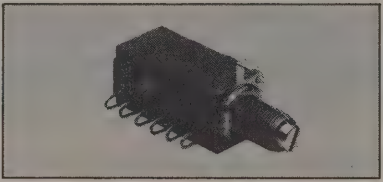
Fixed Attenuators

Models
4114R-033-001
O-Pad Configurations



Variable Attenuator

Models 81/82, 91/92
Straight T-Pad



Switchable Attenuators

Model
3100
T and O-Pad Configurations

NETWORKS DIVISION

Pre-assembled 14 pin DIPs contain balanced or unbalanced attenuator pads. Available in 1/2 dB steps to 36 dB

Features include temperature coefficient of ±100ppm/°C operating temperature −55°C to +125°C

Attenuation tolerance (dB) of ±1%

Flat response through 1MHz

Straight T-Pad

TRIMPOT DIVISION

Bourns Model 3100 switchable attenuators incorporate both switching and attenuator network functions in a single integrated package resulting in reduced component count, assembly costs and PC board space

Sealed to avoid switch contamination and PCB cleaning procedures

Precious metal switch contacts assure low insertion loss and long term operating stability

Impedance: 600 ohms ±2% (balanced or unbalanced)
75 ohms ±5% (unbalanced)

Standard attenuation ranges:
0-1.5, 0-15, and 0-24 dB

Binary Weighted Switching, 0.1 dB minimum step

Consult factory for details or additional values.

BOURNS® TRIM BIN™ KIT

H-800

TRIM BIN
BOURNS

A complete assortment of the most popular Trimpot® trimmers in one convenient package. The kit contains 126 parts representing 50 varieties of resistances and pin styles plus adjustment tools, and product literature.

Single-turn and Multiturn trimmers with wirewound or cermet resistance elements in various configurations (rectangular, square or round) are all included in this kit.

Select the size, shape, type of element and method of adjustment to suit your applications.

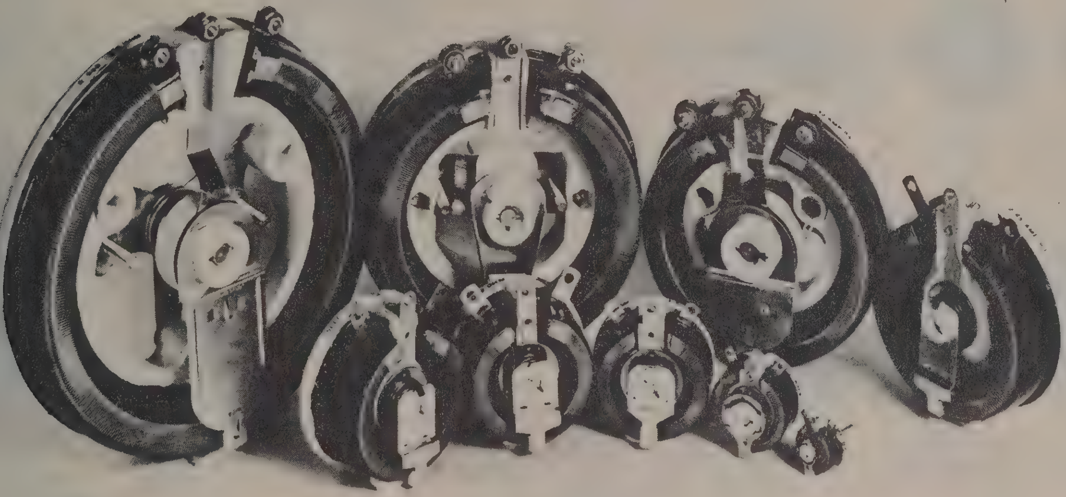
POWER RHEOSTATS

MEET THE MEMCOR FAMILY OF HIGH QUALITY WIRE-WOUND POWER RHEOSTATS



All MEMCOR Power Rheostats are vitreous enamel coated. The core and base are bonded together with vitreous enamel, thereby contributing markedly to the heat dissipation.

Standard tolerance: ±10%, ±5% available as a special.

TYPE	POWER (Watts)	RESISTANCE RANGE	DIAMETER	WEIGHT
R12½	12½ Watt	1 - 5000 Ohms	⅞″	.035 Lbs.
R25	25 Watt	1 - 5000 Ohms	1 9/16″	0.23 Lbs.
R50	50 Watt	0.5 - 10,000 Ohms	2 15/16″	0.45 Lbs.
R75	75 Watt	0.5 - 10,000 Ohms	2¾″	0.60 Lbs.
R100	100 Watt	0.5 - 10,000 Ohms	3⅛″	0.72 Lbs.
R150	150 Watt	0.5 - 10,000 Ohms	4″	1.50 Lbs.
R225	225 Watt	1 - 2500 Ohms	5″	2.18 Lbs.
R300	300 Watt	1 - 2500 Ohms	6″	3.0 Lbs.
R500	500 Watt	1 - 2500 Ohms	8″	3.75 Lbs.
R1000	1000 Watt	1 - 2000 Ohms	12″	10.0 Lbs.

Special Rheostats with Tapered Sections, Locking Devices, Off Positions, Tandem Mountings, Special Shafts on Bushing, and many other variations can be supplied.

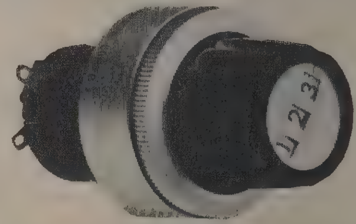
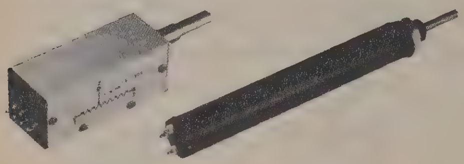
COMBO® 3

Pre-assembled and phased to ±.25% absolute readout accuracy. Mounts in a 1.187″ dia. panel hole. Available with seven potentiometers above.



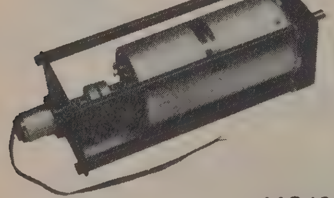
LINEAR MOTION



- Full line of precision linear motion potentiometers. Strokes from 0.433″ to 40″. Available in wirewound, conductive plastic or hybrid elements. Please contact ETI Systems for complete specifications.

MOTOR CONTROLLED POTENTIOMETERS

(MULTI-TURN AND SINGLE-TURN)



MC46-2

ETI Systems offers for the first time a complete line of motor-controlled potentiometers with motor operating currents low enough to respond accurately from operational amplifier outputs.

All ETI Systems rotary potentiometers may be motorized for your applications.

PRECISION POTENTIOMETER, 2,000,000 TURNS LIFE.

GEAR RATIOS: 41:1 TO 235,000:1 WITH DUAL ADJUSTABLE CLUTCHING COUPLER.

PRECISION FRACTIONAL H/P MOTORS IN 6 OR 12 VDC, RPM'S FROM 6,000 to 20,000. A.C. MOTORPOTS NOW AVAILABLE.

See Section 3500, Motors and Drives for full information.

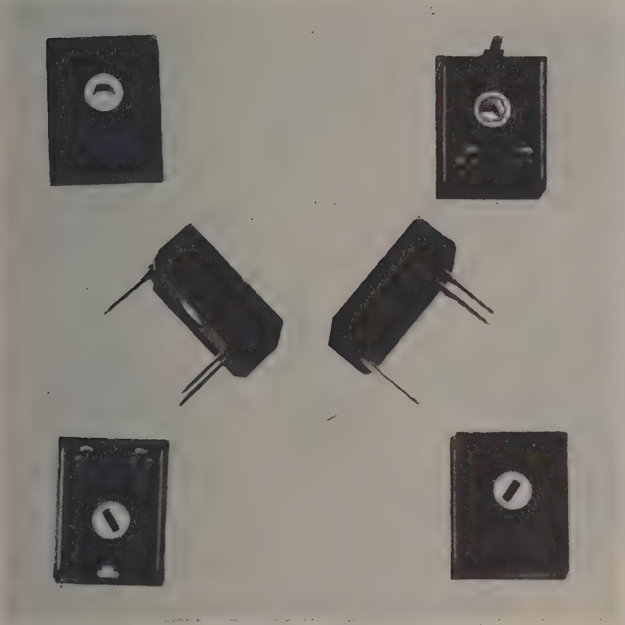
POTENTIOMETERS



Color of protecting housing
PNZ type — black
PNKZ type — green
PNCZ type — red

For the requirements of modern electronic equipment ISKRA has designed a new series of trimmer potentiometers PNZ 10, which feature a number of improvements.
Some of them are:

- △ Miniature rectangular design
- △ Horizontal and vertical mounting
- △ Three types of resistive layers:
  - carbon layer on phenolic
  - carbon layer on ceramic
  - cermet layer on ceramic
- △ With hex slot suitable for automatic adjustment
- △ Dual wiper design reduces contact resistance and electrical noise
- △ Enclosed body protects against dust and short circuits
- △ Non-inflammable plastic according to UL-94-VO

'POTS'

PNZ Series	Wattage	Resistance	T.C.
(Miniature and enclosed trimmer potentiometers)	.2W, .5W	25 ohms - 5 meg ohms	100 ppm/°C 2000 ppm/°C

PNZ Series available in Carbon on Phenolic, Carbon on Ceramic and Cermet Horizontal and vertical mount configurations (standard industry spacing) available with Screw Driver Slot, Hex Slot, Thumbwheel and Spindle Shift.

Open construction trimmers, from 8mm thru 18mm diameters available on order. Custom controls, slider and focus potentiometers also available.

Rated resistance range

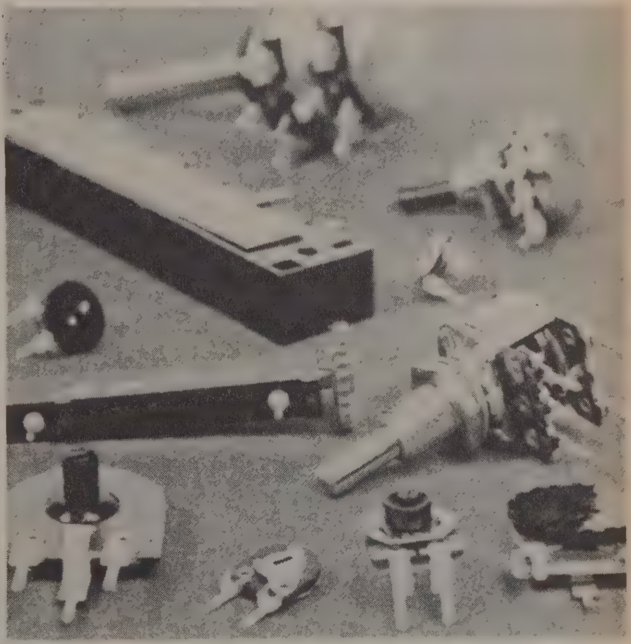
—	1 kΩ	100 kΩ	10 MΩ
25 Ω	2.5 kΩ	250 kΩ	—
50 Ω	5 kΩ	500 kΩ	—
100 Ω	10 kΩ	1 MΩ	—
250 Ω	25 kΩ	2.5 MΩ	—
500 Ω	50 kΩ	5 MΩ	—

CERAMIC BASED PRE-SET POTENTIOMETERS

With the development of modern electronics and miniaturization the technical needs have also increased and consequently pre-set potentiometrs have to be adapted accordingly. The main requirements are:

- △ High electrical loading
- △ Higher operating temperature
- △ Climatic influences
- △ Requirements according to long term stability

Pre-set potentiometers have been developed on alumina ceramics, open version. Several potentiometers are available with dust-proof casing.



ISKRA ELECTRONICS INC.
8 GREENFIELD RD., SYOSSET, NY 11791 • (516) 364-2616

JDK Controls, Inc.

PRECISION CO-MOLDED CONDUCTIVE PLASTIC POTENTIOMETERS & ASSEMBLIES

JDK Controls manufactures one type of potentiometer element — co-molded conductive plastic — because to a serious user, there are very few reasons to use any other type of resistive element technology. In the JDK process, the termination and resist materials are molded under temperature to a plastic substrate. The result is a very hard, smooth surface which promotes ultra-long life and excellent electrical characteristics. This process is superior in reliability to other conductive plastic processes such as film and screening, as well as other element types including cermet, hybrid, and wirewound.

JDK FEATURES

- ULTRA-LONG ROTATIONAL LIFE
  50 Million Cycles — Minimum
- EXCELLENT OUTPUT SMOOTHNESS
  Always under .1%
- LINEAR AND NON-LINEAR
  Functions Available
- OUTSTANDING VALUE
  $\frac{\text{Unit Price}}{\text{Performance}}$
- 18 MONTH WARRANTY
  For most applications —
  because JDK believes in what it manufactures

QUALITY ASSURANCE

All JDK precision co-molded conductive plastic potentiometers are designed and manufactured to meet or exceed the requirements of:

MIL-R-39023A

Our Quality Assurance System meets the requirements of:

MIL-Q-9858A
MIL-I-45208A

MARKETS

JDK precision co-molded conductive plastic potentiometers are used in a variety of commercial, industrial, and military applications.

STANDARD ROTARY SINGLE-TURN SIZES

Model No.	Dia. Inches	Res. Range	Standard* Elect. Travel	Standard* Ind. Lin.	Mounting Styles
6005	.500	1K-50K	325°	1.0%	Servo/Bushing
6008	.750	1K-50K	340°	.5%	Servo/Bushing

6020	2.000	1K-50K	350°	.5%	Servo/Bushing

* Specials Available

CUSTOM REQUIREMENTS AND ASSEMBLIES

JDK specializes in custom requirements for potentiometers in the sizes listed above as well as the following:

- ELEMENTS
  .578″ to 3.0″ outside diameter
  Rotor/Wiper assemblies available
- DC MOTOR POTENTIOMETER ASSEMBLIES
  16 or 22 mm
  Gearheads also available
- NEXT ASSEMBLIES
  JDK will add to its potentiometers —
  brackets, connectors, switches,
  wire harnesses, etc.

For a complete product catalog, call or write:

MAUREY
INSTRUMENT CORP.

Potentiometers

Rotary and Linear Motion Transducers

WIREWOUND These precision potentiometers were developed for military use over a period of 27 years. They are widely used in instrumentation and automation where precise electrical and mechanical requirements are specified. Low resistance tolerance and TCR; close electrical angle tolerance. Custom designs are available.

CONDUCTIVE PLASTIC Our raised molded track will withstand 200,000,000 cycles of high dynamic velocities (10″ per second). The infinite resolution and low noise make these units particularly suitable for servo feedback applications. 100 g shock, 100—20,000 Hz at 50 g. Impervious to most gases and oils.

HEAVY DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC

HDL

WIREWOUND M2028 This transducer combines the inherent accuracy and reliability of a wirewound potentiometer with the physical ruggedness required in industrial applications. They are used with hydraulic and mechanical actuators to measure and control linear motion. The self-aligning spherical ball ends and MS connector simplifies installation. High duty bearings give the ¼ inch shaft stability in the extended position.

CONDUCTIVE PLASTIC P1991 Where severe environmental conditions exist as in mills, factories and power generating plants, this linear motion transducer is practically indestructible. The unit is impervious to dust, oil and moisture. The molded, raised conductive track and graphite composition contacts provide for years of maintenance free service. As with the M2028, the self-aligning spherical ball ends and MS connector allows for ease in installation.

LIGHT DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC

LDL

WIREWOUND (M-Series) These miniature transducers combine the best electrical characteristics in the smallest size at the lowest cost. The units were designed for use in laboratory test equipment, light industrial applications and automation where great accuracy of electrical output is essential. The spherical ball ends add flexibility to mounting. These wirewound, linear motion potentiometers will meet the requirement in the majority of applications.

CONDUCTIVE PLASTIC (P-Series) Where long life in a hostile environment is required, these linear motion transducers with molded, raised tracks and graphite composition contacts have no equal. They are practically impervious to dust, water and oil. The high contact pressure resists the effects of severe vibration and shock. The units are being used in factories and mills where maintenance-free operation is essential.

PRECISION CONDUCTIVE-PLASTIC SINGLE TURN POTENTIOMETERS

PST

These conductive plastic potentiometers have been specially designed for severe environmental conditions in mill-factory operations as well as in critical military applications. The molded, raised track maintains itself free from contamination of foreign particles, oil or water. The high gram pressure of the graphite composition contact on the raised track gives excellent resistance to contact bounce under punishing vibration or shock, as well as an exceptional rotational life. Such units are particularly suited for applications where trouble-free maintenance is required.

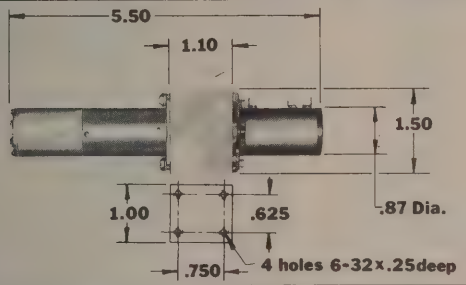
MAUREY INSTRUMENT CORP. MOTORIZED POTENTIOMETERS AND SWITCHES

MPS

General Description & Applications

A family of single turn and multiturn, motor driven potentiometers and switches has been developed for industrial servo applications. They are used for such applications as variable speed controls on power generating sets, electrical-mechanical remote control, and readouts. They provide excellent accuracy at an economical price. These integrated motor-potentiometers are the result of years of Maurey experience in the manufacture of precision potentiometers and motor assemblies. The potentiometers, gear head, clutch, and motor are precisely matched to perform to exacting specifications. Motor-clutch-pot units are available in a wide range of specifications. A motor of selected speed and voltage may be matched with single, 3, 5, or 10 turn potentiometers, either wirewound or conductive plastic. When multiple voltages are required, single cups may be conveniently ganged with or without clutches. In addition, Maurey engineers can provide multi-tap potentiometers, special shafts and mountings, and a wide range of AC or DC motors to your specification.



87-H477

87-H477 DC Motorized Multiturn Potentiometer

A compact, motor driven, 10 turn ⅞" diameter precision potentiometer. A slip clutch between the motor and the potentiometer protects the stops at the end of mechanical travel. The precision machined, square aluminum housing provides mounting holes for the device.

Sealed from dust and normal industrial environment.

Potentiometer independent linearity: ±0.25% or better

Power rating: 2.5 watts at 60°C

Resistances available: 500 Ω, 1K, 2K, 5K, 10K, 20K, 50K, 100K.

200-M642

200-M642 DC Motorized Single Turn Potentiometer

A versatile motor, switch, potentiometer assembly. This model may use multi-pole, single throw switch cups, and with up to six precision potentiometers of various resistance values. All components are easily assembled or changed. Proven design for factory or mill environments. A pointer indicates position of wiper or percentage of voltage. A mounting flange simplifies installation on a panel or bracket.

Potentiometers have 320°electrical angle, linearity: ±0.5%

Power: 5 watts at 85°C.

Resistances available: 100 Ω, 250 Ω, 500 Ω, 1K, 2K, 2.5K, 5K, 10K, 20K, 25K, 50K, 100K.

M2261

M2261 AC Motorized Single Turn Potentiometers

A compact AC motor driven wirewound potentiometer with mechanical stops. A slip clutch provides positive protection to the mechanical stops in the potentiometer. The slip clutch can be eliminated for continuous rotation potentiometers. Also available with single throw switches.

Potentiometer: ±0.5% independent linearity; 4 watts, standard resistances of 250, 500, 1K, 2K, 2.5K, 5K, 10K, 20K, 50K, 100K.

Motor: 115 Volts, A.C. 60 Hz; synchronous continuous duty with positive clutch and instantaneous brake; standard RPM: 1, 2, 4, 6, 10, 12, 30, 60.

Standard DC Motor Data:

Speed: (See chart)
Voltage: (See chart)
Current: (See chart)
Torque at 24 volts: 50 oz-in.
Break away voltage: 10 volts DC

CERMET TRIMMER SPECIFICATIONS

Temperature Coefficient: ±100 ppm/°C, standard
Contact Resistance Variation (CRV): 3%
End Resistance: 1% maximum or 2Ω, whichever is greater.
Resolution: Essentially infinite.
Operating Range:
−25°C to +125°C for Models 8014, 8038.
−55°C to +125°C for Model 8035.
−65°C to +150°C for Models 8024, 8026, 8050.
Torque: 3 to 5 inch-ounces maximum, depending on model.
Sealed to allow wave solder and immersion cleaning.
Stops: Clutch at both ends for multiturn; positive at both ends for single turn models.

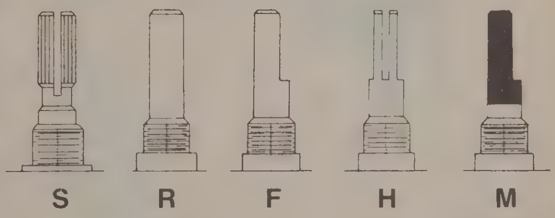
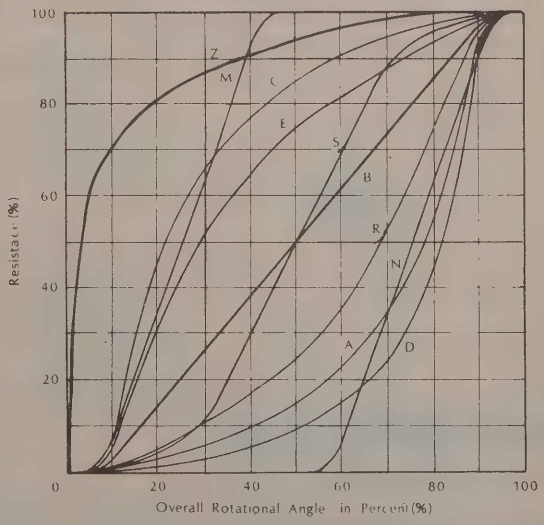
SHAFT TYPES



RESISTENCE TAPERS



single turn, low cost trimming potentiometers

muRata ERiE
MURATA ERIE NORTH AMERICA, INC.

1/10 Watt, Carbon—RVA0607

Resistance Range:	200 ohms to 2 Megohms
Tolerance:	±30%
Residual Resistance:	200 to 500 ohms — 5 ohms max. Over 500 ohms — 1% max.
Taper:	Linear
Power Rating:	0.1W (at 70°C) Derated to 0 watts at 125°C
Max. Working Voltage:	50 VDC
Torque:	.27 to 2.8 oz. in. (20 to 200 g cm)
Terminal Strength:	35.27 oz. (1.0 kg) when the force is applied in the direction of the axes of the terminal
Effective Rotation:	Approx. 220°

1/10 Watt, Carbon—RVF

Resistance Range:	200 ohms to 1 Megohm
Tolerance:	±25%
Residual Resistance:	Less than 5% of nominal rated resistance
Taper:	Linear
Power Rating:	0.1W (at 70°C) Derated to 0 watts at 100°C
Max. Working Voltage:	150 VDC
Torque:	.42 to 4.2 oz. in. (2.9-29.4 mNm)
Terminal Strength:	35.27 oz. (98 mNm) when the force is applied in the direction of the axes of the terminal
Effective Rotation:	270° ±10°

1/5 to 3/4 Watt, Carbon, Cond. Plastic & Cermet—0911/1214

Characteristic	RVA (Carbon) RVX (Cond. Plastic)		RVG (Cermet)	
	0911	1214	0911	1214
Resistance Range:	200 — 5 Megohms*		200 — 1 Megohm	
Tolerance:	±20%			
Residual Resistance:	Less than 500Ω. 5Ω maximum 500Ω and up, less than 1% of nominal rated resistance			
Taper:	Linear			
Power Rating**:	1/5 W (70°C)	⅓ W (70°C)	½ W (70°C)	¾ W (70°C)
Max. Working Voltage***:	250 VDC	350 VDC	350 VDC	500 VDC
Torque:	0.56-4.86 in. oz.	0.83-6.0 in. oz.	0.56-4.86 in. oz.	0.83-6.0 in. oz.
Terminal Strength:	35.27 oz.			
Effective Rotation: Elec.	240°	250°	240°	250°
Mech.	260° ±10°	280° ±10°	260° ±10°	280° ±10°
Stop Strength:	13.9 oz.			

* 100 ohms available in RVA ** Derated to 0 watts at 125°C
*** Max working V varies with resistance value. $V_{max} = \sqrt{\text{Resistance} \times \text{Power}}$

1/3 Watt, Cermet—RVS0707

Resistance Range:	100 ohms to 1 Megohm
Tolerance:	±20%
Temperature Coefficient:	100ppm/°C
Residual Resistance:	100 to 500 ohms — 5 ohms max. Over 500 ohms — 1% max.
Taper:	Linear
Power Rating:	⅓ W (at 70°C) Derated to 0 Watts at 125°C
Max. Working Voltage:	100 VDC
Torque:	.27 to 2.8 oz. in. (20 to 200 g cm)
Terminal Strength:	12.35 oz. (350 gr) when the force is applied in the direction of the axes of the terminal
Effective Rotation:	200° ±10°

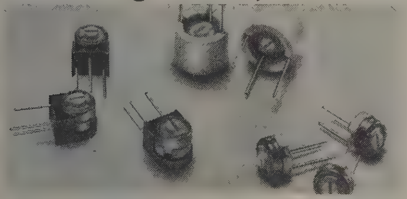
sealed precision cermet trimming potentiometers—±100 ppm/°c

muRata ERIE
MURATA ERIE NORTH AMERICA, INC.

3321 Single Turn, 1/2 Watt



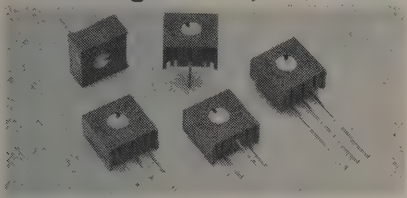
FEATURES

- Flame retardant rotor meets UL94V-0 requirements
- Extremely small size — .260″D. x .181″
- Sealed to withstand wave soldering and immersion cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±20%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +150°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3104 Single Turn, 1/2 Watt



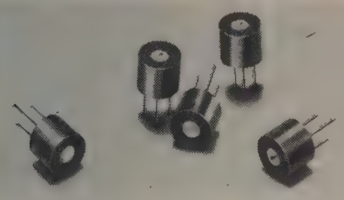
FEATURES

- Low cost
- ⅜″ square

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	2 ohms max.
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	1% or 1 ohm max. whichever is greater

1102, 4-Turn, 1/2 Watt



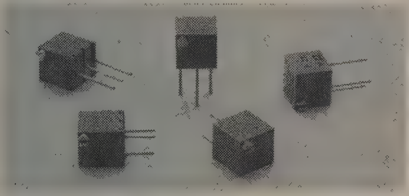
FEATURES

- Unique planetary drive provides the precise setting capability of a multi-turn unit in a small single-turn package
- Just .299″D x .260″
- Sealed to withstand wave soldering and immersion cleaning process

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3103, 12-Turn, 1/4 Watt



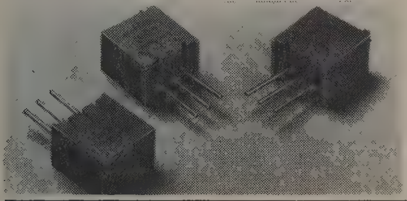
FEATURES

- ¼″ square
- Sealed to MIL-R-22097 standards

SPECIFICATIONS

Resistance Range	10 ohms to 1 Megohm
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.25W at 70°C. Derated to 0W at +125°C
Working Voltage	200 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3102, 25-Turn, 1/2 Watt



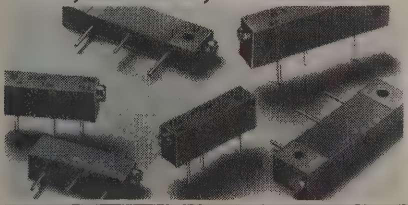
FEATURES

- Small size — .374″ x .394″ x .240″
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2101, 15-Turn, 3/4 Watt



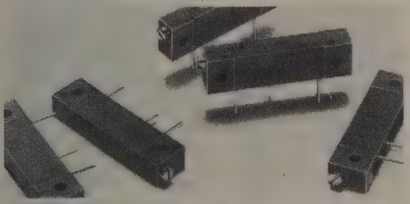
FEATURES

- Small size — .181″ x .252″ x .752″ for close board spacing
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	3% or 1 ohm max. whichever is greater
Power Rating	0.75W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2102, 22-Turn, 1 Watt



FEATURES

- 22 turn mechanism provides extremely fine adjustment capability
- High power dissipation: 1.0W at 70°C
- Sealed to withstand wave soldering and immersion cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	1W at 70°C. Derated to 0W at +150°C
Max. Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

muRata ERIE

OHMITE® vitreous enameled rheostats (potentiometers)

Now, Ohmite offers TWELVE sizes in its line of famous rheostats.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel or Ohmicone® silicone ceramic. Pivoted, universal action mounting of the brush, assures perfect contact. Metal-graphite contact brushes, varied to fit current and resistance, insure good contact with negligible wear of the wire. Terminals at each end of the winding permit connection of the unit as a potentiometer.

INDUSTRY'S SMALLEST NOW, FOR IT'S RATING, RHEOSTAT!

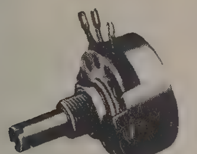
OHMITE® molded composition potentiometers

STYLE CMU
MIL STYLE
RV4N



Ohmite molded composition potentiometers (Type AB) provide high quality and dependable performance.

Because the resistance element is a thick, solid-molded ring, longer life and smoother operation are obtained. This is due also to the molded composition contact. Units are dust and splash proof, fungus and corrosion resistant and meet the requirements of military specification MIL-R-94.

Resistance Ohms Except As Noted Tol. ±10% except * ±20%	Type AB (1⁵⁄₃₂" Dia.) Rated 2 Watts[1]						Type AS (1½" Dia.) Rated ½ Watt[1]

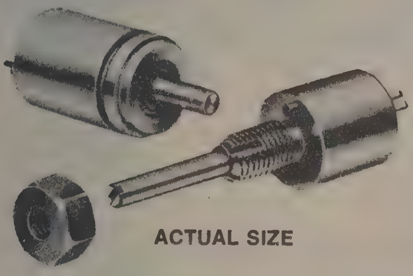
PRECISION POTENTIOMETERS

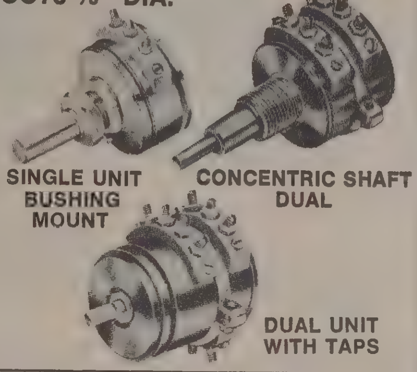
C-050 ½″ DIA.



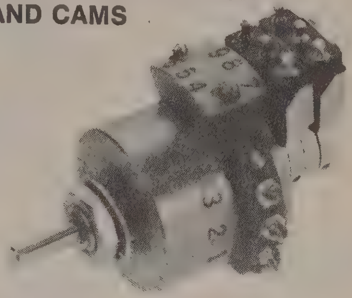
ACTUAL SIZE

Available in resistance values to 500K. Dual Gang Units available both Bushing & Servo Mt.

CO78 ⅞″ DIA.



CO78 - WITH SWITCH AND CAMS



Designed for aircraft and commercial applications.

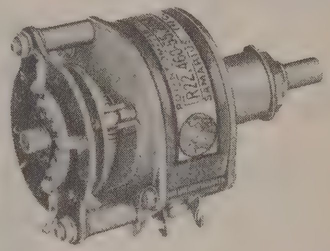
BC200 - C200P 2″ DIA.

Most versatile unit-all resistance values. Taps economically supplied. Gangable and available in both Bushing & Servo Mount.

M300, M301, M400 INSTRUMENT POTENTIOMETERS

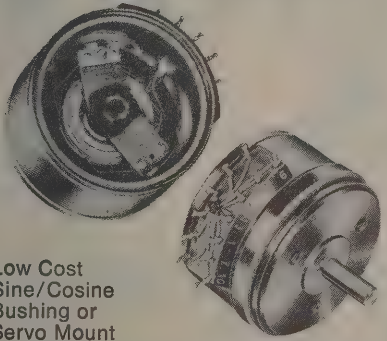
Low Inductance
Low Capacitance

MODEL L140 LOOP CONTROL



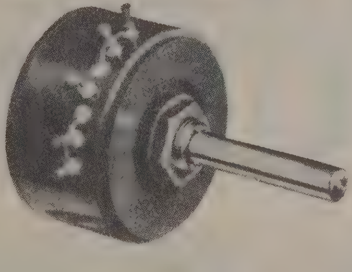
Spring return to center with or without switch and center tap. Used in Satellite and Radar Antennas. Also Medical, Robot and Comparators.

BC200 - C200P SINE/COSINE



Low Cost
Sine/Cosine
Bushing or
Servo Mount

M158 - CP158 1⅝″



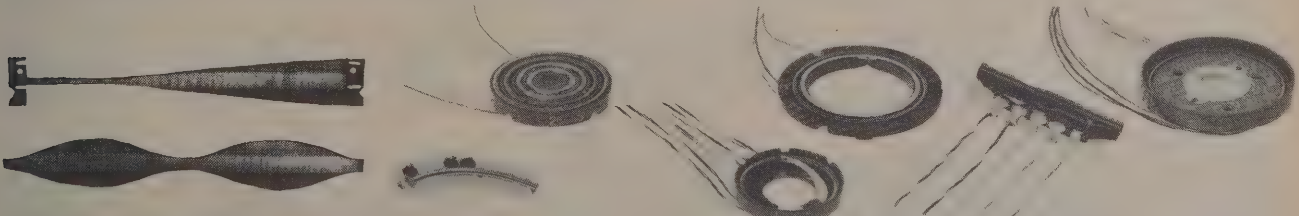
Low Cost Industrial Wirewound & Conductive Plastic Units

SERIES HP-200, HP-300, HP-500 2″, 3″, 5″ HIGH RESOLUTION

Ideal for Tight Linearity Long Elect Angles

HIGH PRECISION POTENTIOMETER AND RESISTOR ASSEMBLY

Samarius, Inc. furnish their clients with a custom winding service for wire wound potentiometer elements in card and mandrel types. Linear or functional requirements are achieved through cooperative R & D with customers. Card profiles are ground with exact duplication from master templates on our own engineered and built machines to tolerances to meet all specifications. We can supply card windings for ¼″ miniature potentiometers to cards 12 feet long and 4 inches wide. Mandrel windings are available up to 16 feet long in any type of wire needed. Over 30 years' experience in supplying high precision potentiometer windings to the field. Call on our engineering staff for their help in solving your winding or potentiometer problems.



EEM PRODUCT SELECTION GUIDES

There are 33 Guides in this edition of EEM. See page 2 (1A•2, 1B•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

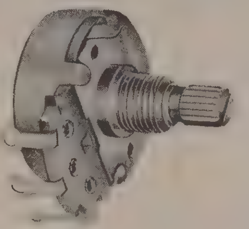
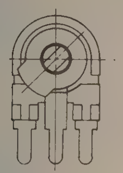
SHOGYO
INTERNATIONAL CORPORATION



ROTARY

Angle of Rotation Ranges: 260° ±5° through 300° ±5°
Resistance Range: 500Ω through 2MΩ
Power Rating: .05W through .25W
Voltage Rating: 150V through 500V
Torque: 200 through 350g—cm
For Switch, Gang Error and Electrical Tap Specifications please consult Shogyo directly.



SEMI-FIXED

Resistance Range: 100Ω through 2KΩ
Resistance Tolerance: ±20%
Taper: Linear
Rated Power: 0.1W
Maximum Operating Voltage: 100V
Rotating Angle: 260 ±15%
Rotating Torque: 40 — 250g—cm
Rotating Life: Maximum 10% resistance change @ 50 rotations

Temperature Characteristic: +5 — 20% resistance change after 5 hours at 70°C
Load Characteristic: ±5% resistance change after 5 hours @ normal temperature
Moisture Characteristic: 7 — 15% resistance change after 5 hours at 95% humidity, 40°C

SLIDE & VARIABLE RESISTORS

The products illustrated and listed are only a small representation of the full range of items available.

Travel: 20 ±0.5(mm) through 60 ±0.5(mm)
Mounting Pitch: 65(mm) — 31 ±0.3(mm) through 85(mm)
Resistance Range: 500Ω — 1MΩ, 5KΩ through 1MΩ
Power Rating: 0.1W through 0.5W
Voltage Rating: 150V through 500V
Sliding Force: 50 — 350g
Single and Double Types available.

RESISTANCE CHARACTERISTICS

TAPER	CHECK POINT	$\frac{V1\text{-}2}{V1\text{-}3}$ x 100 (%)	$\frac{V2\text{-}3}{V1\text{-}3}$ x 100 (%)

TECHNO

a Subsidiary of OAK INDUSTRIES INC.

CERMET TRIMMERS

FEATURES

- Infinite resolution
- Over 20 turns even on 1/4″ size
- Board washable
- Withstands thermal stress environments
- Easy adjustability
- Established reliability to MIL-R-39035

SPECIFICATIONS

ELECTRICAL

Resistance Values: 10 Ohms to 1 meg Ohms
Standard Resistance Tolerance' ±10%
End Resistance: 2 Ohms or 2% of R whichever is greater (0.2 Ohms typical).
Noise (CRV): 3% of R or 3 Ohms whichever is greater (0.5% typical)
Insulation Resistance: >100,000 meg Ohms (500 Vdc)
Dielectric (DWV): 1000Vac @ Ambient temp.

MECHANICAL

Rotation: Clutch stop, wiper assembly idles
Adjustment turns: 22±2 = RJ/RJR 26, 25±2 = RJ/RJR 24
Rotational life: 200 cycles (minimum)
Torque: 3.0 ounce-inches (maximum)

MATERIALS

Case: High temperature plastic
Wiper: Multifinger
Adjustment screw: Corrosion resistant metal
Leads: Solderable

ENVIRONMENTAL

Power rating: 0.25W @ 85° C derated to 0.0W @ 150° C (RJ/RJR26) 0.50W @ 85° C derated to 0.0W @ 150°C (RJ/RJR24)
Oper. Temp.: -55° to +150°C
Temp. Coeff.: ±100PPM/°C (max.)
±50PPM/°C available
Load Life: 2000 hrs per MIL-R-39035 thermal shock, vibration, shock, salt spray, and moisture resistance: per MIL-STD-202
Immersion: per MIL-R-22097 and MIL-R-39035

TECHNO

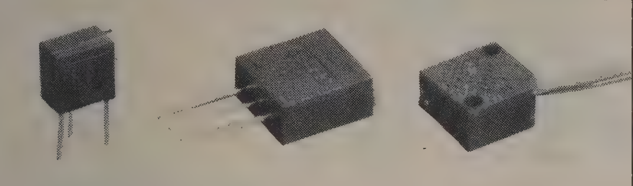
a Subsidiary of OAK INDUSTRIES INC.

WIREWOUND TRIMMERS



FEATURES

- Precious metal wiper
- Established reliability to 0.01%/1,000 hours, R level per MIL-R-39015
- Special configurations available
- Military quality at affordable prices

SPECIFICATIONS

ELECTRICAL

Resistance Values: 10 to 50k Ohms (RT/RTR24 Type)
10 to 25k Ohms (RT26 Type)
Std. Resis. Tol.: ±5% (closer tolerances available)
End Resistance: 2% or 1 Ohm (whichever is greater) (0.2 Ohms typical).
Noise (ENR): 100 Ohms (Max.) (MIL-R-27208 & MIL-R-39015)
Insulation Resis.: >100,000 meg Ohms (500 Vdc)
Dielectric (DWV): 1000Vac @ Ambient temp.

MECHANICAL

Rotation: Clutch stop
Adjustment turns: 22±4
Rotational life: 200 cycles (min.)
Torque: 5 ounce-inches (max.)

MATERIALS

Case: High temperature plastic
Wiper: Precious metal
Adj. Screw: Corrosion resistant metal
Leads: Solderable

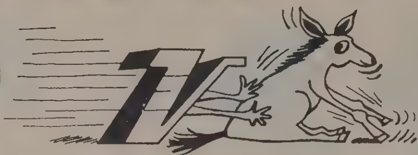
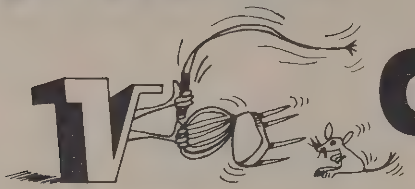
If you want to move it



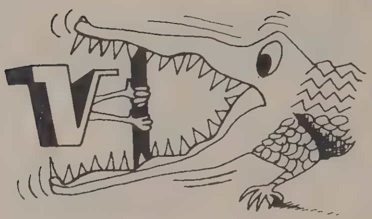
,



control it,

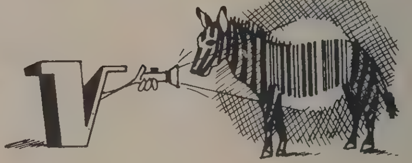
sense it

,



stop it,

or scan it

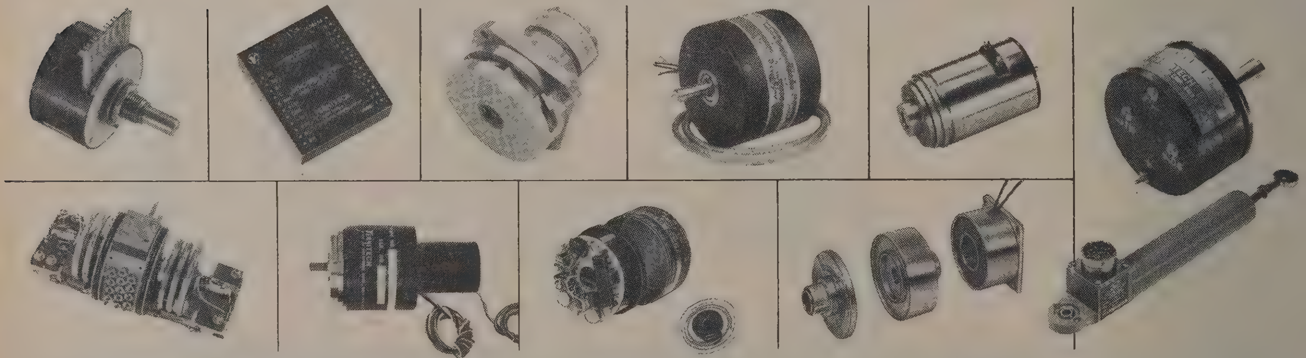


,

call Vernitech.

That is, if you're looking for instrument motors, optical and contacting shaft angle encoders, rotary and linear potentiometers, potentiometric pressure transducers, industrial precision brakes or clutches, or laser scanning motors, we'll probably have just what you're looking for. Just look on the opposite page. And if you *don't* find what you want, call Vernitech, give us the particulars, and we'll make it for you.

VERNITECH



VERNITECH, a division of Vernitron Corp., 300 Marcus Blvd., Deer Park, NY 11729 • 516-586-5100 • TWX 510-227-6089

POTENTIOMETERS

employing Vernitech's unique conductive film and precious metal wipers...respond to wiper motions as small as .000005".

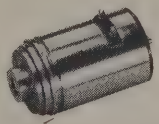
Rotary Single Turn
Linear, non-linear, sine/cosine available.
Sizes 0.5", L 0.5" to Dia 5.0", L 1.880".
Linearity or conformity ±2% to 0.025%.
Resistance range 1KΩ to –250KΩ.

Rotary Multi-Turn
10 to 100 turns available.
Sizes Dia 0.5", L 1.5" to Dia 2.0", L 2.625".
Linearity or conformity ±0.5% to 0.015%.
Resistance range 1KΩ to 500KΩ.

Linear Motion
Electrical stroke lengths 1" to 60".
Linearity or conformity ±0.2% to 0.01%.
Resistance range 250Ω/in to 250KΩ/in.

CLUTCHES AND BRAKES

(electromagnetic)



hundreds of models and sizes available from stock.

Precision Instrument Type
Sizes 5, 8, 11, 13, 15, and 18.
Standard length and wafer types. Spring and magnetic.
Meet MIL-E-5272C. Zero backlash.
Torque 5 to 150 oz. in. Response time 5 to 142 ms.

Industrial Types — open frame
Sizes 8, 12, 17, 22, 26. Torque to 75 in. lb.
Response time 6-30 ms at rated voltage.

Industrial Types — enclosed frame
Hybrid or special units designed for particular applications when MIL-SPECS and close tolerances are not essential, but where having a complete "self-contained" unit is desirable: cassette tape decks, analog devices actuators, etc.

Fail Safe
Braking action occurs 10 ms after coil is de-energized or power fails. Sizes 8, 17, 30, and 45.
Torque up to 50 in. lb. Zero backlash. Adjustable to compensate for wear.

PRESSURE TRANSDUCERS

potentiometer type,

featuring infinite resolution, long life, and high reliability through the use of conductive film resistance elements, multiple wipers, and direct coupling of pressure sensing element to potentiometer wipers.

Pressure ranges from 0.1 to 10,000 psi in gage, absolute and differential types. Also available with high overpressure capability.

Linearity to ±0.3%. Air speed, altitude and low cost types available.

VERNITECH

MOTORS

Over 1500 Standard Designs or Custom Designed to your requirements.

Synchronous — for laser scanning
Sizes 5, 8, 11, 15, 18, 20, 25, 35.
Speeds 100 to 48,000 rpm.
5 through 1600 Hz. 2, 4, 8, 12 poles.

Servo
Viscous damped — sizes 8, 10, 11, 15, 18.
Speeds 3000 to 10,000 rpm.
Inertially damped — sizes 8, 11, 15, 18.
Speeds 3000 to 9500 rpm.

Stepper
Sizes 5, 8, 11, 15. Stepping angles 7.5°, 15°, 45°, 90°.
Stepping rates 100, 110, 125, 130, 175, 180, 225, 240, 260, 400, 725, 800, 1000 pps.

Precision Motor Generators Sizes 8, 10, 11, 15, 18, 23.

Integrating and Computer Motor Tachometers
Sizes 8, 10, 11, 15, 18, 23.

SHAFT ANGLE ENCODERS

featuring precision chrome on glass discs for highest accuracy.

Optical Incremental
VOE 005 — Dia. 0.500", 0.510" L. To 256 pulses (modular)
VOE 05 — Dia. 0.500", 0.820" L. To 256 pulses
VOE 11 — Dia. 1.062", L. 1.80". To 1024 pulses
VOE 015 — Dia. 1.510", L. 0.88". To 1024 pulses (modular)
VOE M15 "Dial Coder" — panel mounted, 1.500" dia., L. 1.08" 127-256 pulses
VOE 023 — Dia. 2.25", L. 80". To 1250 pulses (modular)
VOE 23 — Dia. 2.250", L. 1.875". To 1250 pulses (available sealed)
VOE L23 "Thrift-Line" Dia. 2.250" L. 1.875". To 600 pulses
VOE 25 — Dia. 2.500", L. 2.500". To 3000 pulses (available sealed)

Optical Absolute
VOE 23: Binary, Gray or BCD to 512 counts per turn. Counting speed: 3000 rpm.
VOE 30: Single or multi-turn; Binary, Gray or BCD. To 1024 counts per turn. Max count (2^{19}) in 512 turns. Counting Speed: 30KHz.

Contacting Absolute
Sizes 11, 18, 23, & 31. Binary, Gray, and BCD. Single or multi-turn. Max count (2^{19}) in 2048 turns. 64 to 1024 counts per turn. Operating speed 200 rpm max.

SYNCHRO CONVERTER MODULES

Tracking Synchro-to-Digital and Resolver-to-Digital Converters
Economy Series VSD/VRD. Precision Series VSDH/VRDH Compact, solid state, high performance converters employing type 11 servo loops for lag free tracking at rates to 3600°/sec. Resolution 10 bits, 12 bits, or 14 bits.

Digital-to-Synchro and Digital-to-Resolver Converters Series VDS/VDR:Accept shaft angle data in digital form for conversion to analog at accuracies up to ±4'.

Tracking Synchro-to-Linear DC Converter Module
Series VSDCH/VRDCH:Accept 3-wire synchro or 4-wire resolver input data, convert it to DC analog voltage proportional to synchro angle of input. Accuracy ±6' (typ.).

Tracking Angle Position Indicator
VNST-104: Tracking Synchro-to-Digital Converter, can also be used as a control element. Four decade 0.8" red LED display. Display accuracy ±6' arc (typical). Tracking rate 3600°/sec max. Parallel binary or BDC output.
Self contained line operated power supply.

Custom designs available to your specifications.

VRN INTERNATIONAL
A DIVISION OF VERNITRON CORPORATION

PRECISION POTENTIOMETERS

MODEL	DESCRIPTION
 5001	**½″ Diameter Single-Turn Wirewound** **Power rating:** 2W @ 40°C **Standard resistance range:** 10Ω to 50KΩ **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±5% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 320° ±5°
 5000	**½″ Diameter Multi-Turn Wirewound** **Power rating:** @ 40°C 1W (5000) 1.5W (5005) **Standard resistance range:** 100Ω to 100KΩ (5000) 50Ω to 50KΩ (5005) **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% std. (closer upon request) **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 125°C **Mechanical rotation:** 3600° +6° −0 (5000) 1800° +6° −0 (5005) **Electrical rotation:** Same as mechanical
 7501	**¾″ Diameter Single-Turn Wirewound** **Power rating:** 2.25W @ 40°C **Standard resistance range:** 50Ω to 50KΩ **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±1% **Noise (ENR):** 100Ω max. **Operating temperature range:** −55 to 125°C **Mechanical rotation:** Continuous **Electrical rotation:** 320° ±5°
 7561	**¾″ Single-Turn Conductive Plastic** **Power rating:** 1W @ 70°C **Standard resistance range:** 100Ω to 200KΩ **Resistance tolerance:** ±20% **Temperature coefficient:** ±500ppm/°C **Linearity (Ind.):** ±1% std. (closer available) **Output smoothness:** .5% std. **Operating temperature range:** −65 to 125°C **Mechanical rotation:** Continuous **Electrical rotation:** 340° ±5°
 7400/ 7500	**¾″ Diameter Multi-Turn Wirewound** **Power rating:** @ 40°C 3W (7400) 2W (7405) **Standard resistance range:** 100Ω to 100KΩ (7400) 100Ω to 50KΩ (7405) **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** .25% (7400) .5% (7405) **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 125°C **Mechanical rotation:** 3600° +6° −0 (7400) 1800° +6° −0 (7405) **Electrical rotation:** Same as mechanical
 0871	**⅞″ Diameter Single-Turn Wirewound** **Power rating:** 1.25W @ 70°C **Standard resistance range:** 100Ω to 10KΩ **Resistance tolerance:** ±3% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±2°
 8400/ 8500	**⅞″ Diameter Multi-Turn Wirewound** **Power rating:** @ 40°C 3W (8400/8500) 2W (8403-05/8503-05) **Standard resistance range:** 100Ω to 100KΩ (8400/8500) 50Ω to 50KΩ (8403-05/8503-05) **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.25% (8400/8500) ±.5% (8403-05/8503-05) **Noise (ENR):** 100Ω max. **Operating temperature range:** −55 to 125°C **Mechanical rotation:** 3600° +10° −0 (8400/8500) 1800° +10° −0 (8405-8505); 1080° +10° −0 (8403/8503) **Electrical rotation:** Same as mechanical

Most singleturn models are available with cermet or conductive plastic elements. All styles are supplied with linear taper as standard. Many are available with non-linear tapers. All styles are available in a bushing mount. Many are available in a servo mount option.

MODEL	DESCRIPTION
 7800	**⅞″ Diameter Multi-Turn Wirewound** **Power rating:** 2W @ 40°C **Standard resistance range:** 100Ω to 50KΩ **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.25% **Noise (ENR):** 100Ω max. **Operating temperature range:** −55 to 105°C **Mechanical rotation:** 3600° +10° −0 **Electrical rotation:** Same as mechanical
 1000/ 1220	**1″ Diameter Multi-Turn Wirewound** **Power rating:** @ 40°C 3W (1000) 2W (1005) 4W (1215) 5W (1220) **Standard resistance range:** 500Ω to 250KΩ (1000) 250Ω to 100KΩ (1005) 500Ω to 450KΩ (1215) 1KΩ to 600KΩ (1220) **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% (1000/1005) ±.1% (1215/1220) **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 125°C **Mechanical rotation:** 3600° +4° −0 (1000) 1800° +4° −0 (1005) 5400° +4° −0 (1215) 7200° +4° −0 (1220) **Electrical rotation:** Same as mechanical
 1061	**1 1/16″ Diameter Single-Turn Wirewound** **Power rating:** 1.5W @ 40°C **Standard resistance range:** 50Ω to 50KΩ **Resistance tolerance:** ±3% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±2°
 **1441**	**1 7/16″ Diameter Single-Turn Wirewound** **Power rating:** 2W @ 40°C **Standard resistance range:** 100Ω to 40KΩ **Resistance tolerance:** ±3% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±2°
 151	**1½″ Diameter Single-Turn Wirewound** **Power rating:** 3.5W @ 40°C **Standard resistance range:** 100Ω to 100KΩ **Resistance tolerance:** ±5% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.5% **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±5°
 HD150	**1½″ Diameter Multi-Turn Wirewound** **Power rating:** @ 40°C 5W (HD150) 3W (HD153) 4W (HD155) **Standard resistance range:** 500Ω to 500KΩ (HD150) 200Ω to 250KΩ (HD153) 200Ω to 500KΩ (HD155) **Resistance tolerance:** ±3% (HD150) ±5% (HD153/155) **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.25% (HD150) ±.5% (HD153/155) **Noise (ENR):** 100Ω max. **Operating temperature range:** −55 to 100°C **Mechanical rotation:** 3600° +4° −0 (HD150) 1080° +4° −0 (HD153) 1800° +4° −0 (HD155) **Electrical rotation:** Same as mechanical
1751	**1¾″ Diameter Single-Turn Wirewound** **Power rating:** 2.5W @ 40°C **Standard resistance range:** 50Ω to 50KΩ **Resistance tolerance:** ±3% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.25% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±2°
 **2000/ 3000**	**2″ and 3″ Diameter Single-Turn Wirewound** **Power rating:** @ 40°C 4W (2000) 6W (3000) **Standard resistance range:** 100Ω to 60KΩ (2000) 200Ω to 100KΩ (3000) **Resistance tolerance:** ±3% **Temperature coefficient:** ±20ppm/°C **Linearity (Ind.):** ±.25% **Noise (ENR):** 100Ω max. **Operating temperature range:** −65 to 150°C **Mechanical rotation:** Continuous **Electrical rotation:** 350° ±2°

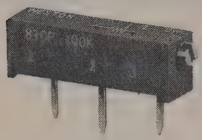
POTENTIOMETERS
¾" LOW PROFILE CERMET

FAIRCHILD WESTON
Schlumberger



830P

- Sealed to guard against contaminants: Sealed to withstand "Flow" Soldering and Industrial type immersion cleaning
- Weston hi-stability cermet element
- Wide resistance range, 10 ohms to 2 megohm
- Resistance tolerance ± 10%
- Resolution, essentially infinite
- Adjustability — 12 turns of adjustment screw
- Mechanical protection — stops and slip clutch
- High power — 0.75 watt at 70°C
- Wide operating temperature range -55°C to + 125°C
- Temperature coefficient ± 100 PPM/°C max.
- Weldable and solderable terminal pins
- Wide variety of lead configurations available

SPECIFICATIONS

ELECTRICAL

Standard Resistance Range: 10 ohms to 2 megohm

Resistance Tolerance: ± 10%

End Resistance: 2 ohms maximum

Contact Resistance Variation: 3% or 20 ohms, whichever is greater

Temperature Coefficient: ± 100 PPM/°C max.

Power Rating: 0.75 watt (in still ajr) at 70°C

Insulation Resistance: 1000 megohms minimum (500 V.D.C.)

Dielectric Strength: 900 V.A.C., Room conditions

Maximum Working Voltage: 300 V.D.C. (RMS) or within power rating, whichever is less

Continuity: Maintained for full mechanical range

Resolution: Essentially infinite

MECHANICAL

Decimal Tolerance: .XX = ±.010

Unless Otherwise Specified: .XXX = ±.005

Mechanical Protection: Stops, wiper idles

Mechanical Adjustment: 12 turns nominal

Rotational Life: 200 cycles min. with no discontinuity

Torque: 5 oz. in. maximum

Weight: 1 gram maximum

ENVIRONMENTAL

Operating Temperature Range: -55°C to + 125°C

Moisture Resistance: MIL-R-22097, MIL-STD-202, Method 106 2%*

Shock: 100 G's per MIL-R-22097 1%*

Vibration: 20 G's 10 to 2000 cycles per MIL-R-22097, Test Condition D 1%*

Load Life: 1000 hrs. @ rated power per MIL-R-22097 3%*

High Temperature Exposure: MIL-R-22097, except 125°C 3%*

Low Temperature Operation: MIL-R-22097(2%*)

*ALLOWABLE RESISTANCE CHANGE

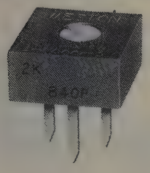
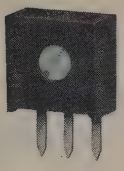
FAIRCHILD WESTON
Schlumberger

SERIES 840 POTENTIOMETERS ⅜" LOW COST CERMET

WESTON



840P



840X

- Sealed to guard against contaminants: Sealed to withstand "Flow" Soldering and Industrial type immersion cleaning
- Weston hi-stability cermet element
- Wide resistance range, 10 ohms to 2 megohm
- Resistance tolerance ± 10%
- Resolution, essentially infinite
- Adjustability — single turn
- High power — 0.5 watt at 70°C
- Wide operating temperature range -55°C to + 125°C
- Temperature coefficient ± 100 PPM/°C maximum
- Weldable and solderable terminal pins

SPECIFICATIONS

ELECTRICAL

Standard Resistance Range: 10 ohms to 2 megohms

Resistance Tolerance: ± 10%

End Resistance: 2% or 20 ohms, whichever is greater

Contact Resistance Variation: 3% or 20 ohms, whichever is greater

Temperature Coefficient: ± 100 PPM/°C maximum

Power Rating: 0.5 watt (in still air) at 70°C

Insulation Resistance: 1000 megohms minimum (500 VDC)

Dielectric Strength: 900 VAC room conditions

Maximum Working Voltage: 300 VDC (RMS) or within power rating, whichever is less

Continuity: Maintained for full mechanical range

Resolution: Essentially infinite

MECHANICAL

Decimal Tolerance: .XX = ±.010

Unless Otherwise Specified: .XXX = ±.005

Stop Strength: Solid — .15 oz. in. minutes

Mechanical Adjustment: 290° nominal

Rotational Life: 200 cycles minimum with no discontinuity

Torque: 5 oz. in. maximum

Weight: 1 gram maximum

ENVIRONMENTAL

Operating Temperature Range: -55°C to + 125°C

Moisture Resistance: MIL-R-22097, MIL-STD-202, Method 106 2%*

Shock: 100 G's per MIL-R-22097 1%*

Vibration: 20 G's 10 to 2000 cycles per MIL-R-22097, Test Condition D 1%*

Load Life: 1000 hours @ rated power per MIL-R-22097 3%*

High Temperature Exposure: MIL-R-22097, except 125°C 3%*

Low Temperature Operation: MIL-R-22097(2%*)

TRIMMER POTENTIOMETER CROSS-REFERENCE GUIDE

FAIRCHILD WESTON
Schlumberger

THIS GUIDE PROVIDES A FAST CROSS-REFERENCE BETWEEN WESTON PRODUCTS AND COMPETITIVE UNITS OFFERED BY OTHER POTENTIOMETER COMPANIES. IT IS NOT MEANT TO INFER *EXACT* INTERCHANGEABILITY IN ALL INSTANCES. FOR FURTHER INFORMATION CONCERNING PRODUCT SUBSTITUTES CONTACT YOUR WESTON SALES REPRESENTATIVE OR DISTRIBUTOR.

NOTE 1: Where a Weston series number is followed by a Mil-Designation style (EG: RT22C2P) this type unit is listed on the Qualified Product List (QPL). The competitive unit would also appear on the QPL list unless otherwise noted.

Motorola surface-mount technology slashes system size and weight to one-tenth or less of what's acceptable now. Packages aren't much bigger than the chips they contain. Layers are cut in half, costs plunged 75% or more, higher frequencies optimized through short, uniform trace lengths.

You can mass-place them at up to 200K/hour.

We already offer the broadest line of easy, automatable, testable, surface-mount semiconductors--over 800--with more coming.

Pick and place in a fraction of discrete space.

Choose from most-popular switching transistors, Darlingtons, HV and low-noise types, RF, JFETs, tuning diodes, thyristors, rectifiers and PINs, plus numerous other discrete functions. All are SOT-23 packaged, with many in SOT-89 and MLL outlines for application flexibility. All SOT-23s are ready for placement; no lead forming is required. SOT-23/SOT-89 packaging is laser-marked. And, we'll encapsulate almost any discrete in a SOT package, depending on die compatibility and requirements. Low-profile, too.

MLL. Most economical of all.

Think of a DO-35 or DO-41 without leads and you've got the MLL (Motorola leadless) package...optimized for very high-volume, very low-cost application. Whereas SOT-23s are ideal for transistors, reliable MLL packaging is perfect for our full line of 0.5 to 1 W zeners and rectifiers in an extensive voltage range because of minimized space, ease of placement and second-to-none economy.

SOIC. Space-saving linear alternative.

Get standard linear DIP performance in tiny SOICs from Motorola and give yourself a 2.5:1 delta in board space savings.

Out lineup includes op amps, comparators, voltage regulators, TRIMFETs™, DACs, arrays and timers.

All current and future linear ICs are potential candidates for SO8, SO14 or SO16 packaging as long as chip size and power dissipation are within viable parameters.

SOICs pass the same assembly procedures as DIPs and offer identical performance at both 0° to 70°C and -40° to 85°C ranges. Device reliability is inherent because industry studies show it to be so...and because it's Motorola. A 20-times improvement in quality over manually-inserted units not only enhances reliability but saves rework and returns.

Automate it with tape and reel.

T1 or T2 options in industry-accepted 8 mm and 12 mm tape and reel format, 3,000 devices per reel, enable immediate placement of most discretes on automatic or semi-automatic lines. All can be wave or reflow soldered.

Write for our new Surface-Mount brochure BR127REVI. Motorola Semiconductor Products, Inc., Box 20912, Phoenix, AZ 85036.

The squeeze is on.

Series PTC

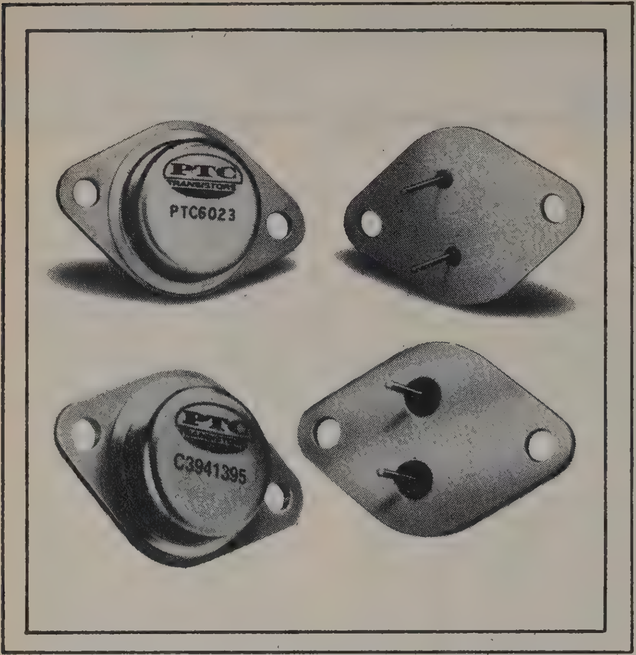
High Voltage NPN Darlington Transistors

FEATURES

- High Voltage Ratings
- Fast-Switching Capabilities/Fast Turn-Off Time
- Glass Passivated Die to Provide Excellent High Temperature Stability
- Thermally Stable Structure for Reliability in Power Cycling
- No Parasitic Diode on Output Transistor

APPLICATIONS

- High Voltage Switching Power Supplies
- Inverters/Regulators
- Deflection Circuits
- Pulse-Width-Modulated (PWM) System Control Circuitry



HIGH VOLTAGE NPN DARLINGTON TRANSISTORS

Series PTC 5000/5001 20 Amperes — 400 Volts

Series PTC 6000/6001/6002/6003
15 Amperes — 500 Volts

Series PTC 6060/6061/6062/6063
20 Amperes — 500 Volts

Series PTC 6072/6073 40 Amperes — 600 Volts

Series PTC 6022/6023 40 Amperes — 600 Volts

Series PTC 7000/7001/7002/7003
50 Amperes — 500 Volts

Series PTC 9000/9001/9002
20 Amperes — 750, 850 and 900 Volts

General

The Powermode power transistor line consists of NPN high voltage transistors and Darlington transistors. Power transistors are available in the current range of 3 to 20 amperes with voltages of 200 to 1000 volts. The Darlington transistors come in the current range of 5 to 50 amperes with voltages of 200 to 1000 volts.

For more information request PTC Publications.

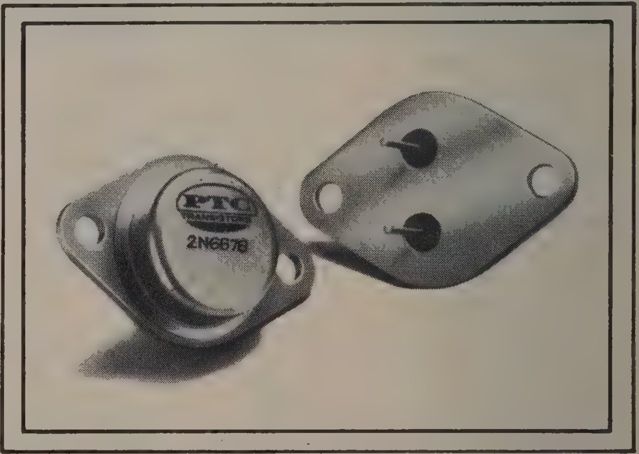
High Voltage NPN Transistors

FEATURES

- High Voltage Rating — 400 Volts
- Glass Passivation
- Superior Resistance to Thermal Fatigue
- Industrial and Military Applications

APPLICATIONS

- Switching Regulators
- PWM Inverters
- Deflection Circuits
- Motor Controls
- Solenoid Drivers



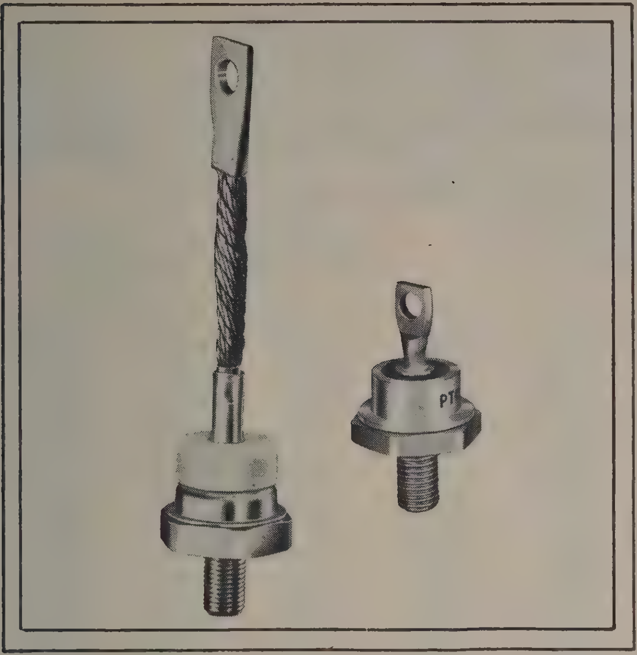
HIGH VOLTAGE NPN TRANSISTORS

Series 2N6674/2N6675
10 Amperes — 400 Volts

Series 2N6676/2N6677/2N6678
15 Amperes — 400 Volts

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204



FAST RECOVERY RECTIFIERS

Series PTC 862/864/866
40 Amperes — 200-600 Volts

Series PTC 872/874/876
50 Amperes — 200-600 Volts

Series PTC 900/901/902/903
50 Amperes — 900-1200 Volts

Series PTC 920/921/922/923
50 Amperes — 900-1200 Volts

Series PTC 940/941/942/943
100 Amperes — 900-1200 Volts

Series PTC 950/951/952/953
130 Amperes — 900-1200 Volts

Series PTC

Fast Recovery Rectifiers

FEATURES

- Low Forward Voltages
- High Voltage Ratings
- Fast Reverse Recovery Time
- Glass Passivated Die to Provide Excellent High Temperature Stability
- High Surge Capability

APPLICATIONS

- Switching Power Supplies
- Inverters/Regulators
- Free Wheeling Diodes

General

The Powermode rectifier line features high voltage, high current and fast recovery times. These rectifiers are intended for use in switching power supplies and as freewheeling diodes in inverter circuits. The ratings of the rectifier line range from 40 to 130 amperes with voltages of 200 to 1200 volts.

For more information request PTC Publications.

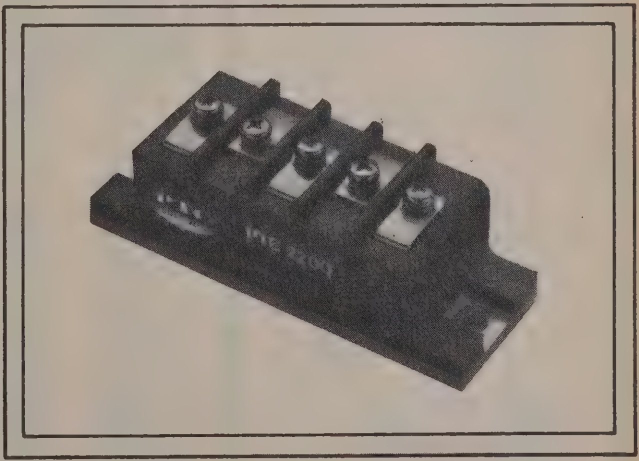
Power Modules

FEATURES

- Isolated Collectors
- High Voltage Rating – 600 Volts
- Overload Short Circuit Rating
- Glass Passivated Die to Provide Excellent High Temperature Stability

APPLICATIONS

- High Current Switching Power Supplies
- Inverters/Regulators
- Pulse-Width-Modulated (PWM) System Control Circuitry



POWER MODULES

Series PTC 2200/2201
30 Amperes — 600 Volts

CAPAR COMPONENTS CORPORATION

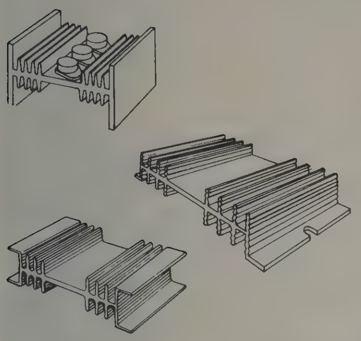
The DELBERT BLINN COMPANY has for many years designed, fabricated and supplied specialty hardware items for the rapidly changing and expanding electronics industry. Our vast experience in plastic and metal fabrication guarantees you the best possible service for your particular needs regardless of quantity.



HEAT SINK DISSIPATORS

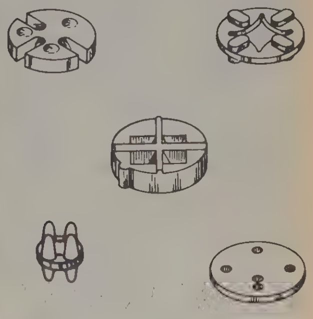
Efficiency, light weight and economy are incorporated in a complete line of professionally engineered heat sinks available in a variety of sizes and shapes. Material: Aluminum 6063-T5 alloy, mill finish. Lengths to 5 ft. available. (Serrations--U.S. Pat. No. 3163207). Can be cut, drilled, anodized or painted to your specifications.

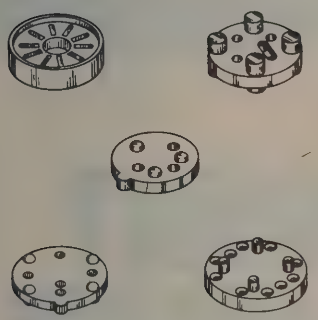
CATALOG SERIES — AHS

NYLON TRANSISTOR PADS

Precision molded from Zytel 101 (MIL-P-20693), these pads provide an economical insulator and thermal barrier with high dielectric strength. Resist continuous exposure to 135° C.

CATALOG SERIES — TPN





DIALLYL PHTHALATE TRANSISTOR PADS

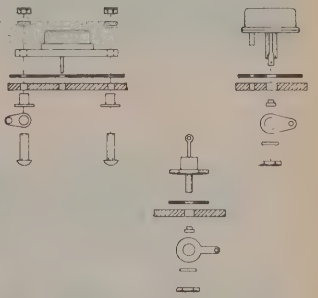
Available with and without stand-offs in configurations for all applications, these pads are molded of glass-filled Diallyl Phthalate (Mil-M-14F SDG) and provide an excellent mounting base. They resist continuous exposure to 400°F. and offer very high dielectric strength.

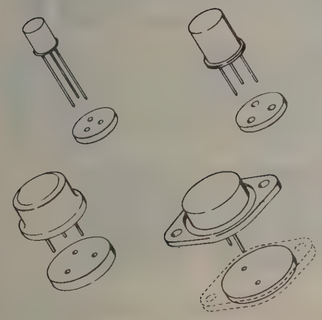
CATALOG SERIES — TPD

MOUNTING KITS

These and other standard kits incorporating mica, beryllium oxide or anodized aluminum insulators provide the parts necessary to mount all semi-conductors. Special materials and configurations can also be furnished to your specifications.

CATALOG SERIES — MK





BERYLLIUM OXIDE TRANSISTOR HEAT SINKS

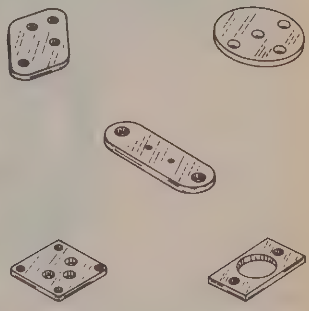
Made of high purity (99+%) sintered BeO, these sinks provide a satisfactory solution to the design engineer where electronic applications require both dielectric insulation and high heat transfer.

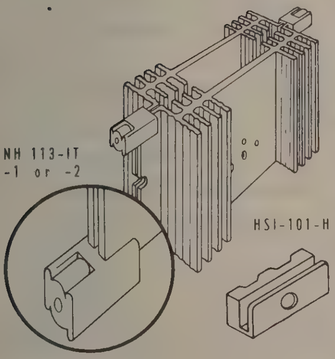
CATALOG SERIES — BOS

MICA INSULATORS

Delbert Blinn mica insulators are precision stamped from quality controlled stock and will withstand temperatures to 1000°F. with negligible dehydration. Standard thickness is .002 ± .001. Other designs, shapes, thicknesses or tolerances are available on special order.

CATALOG SERIES — MI





HEAT SINK MOUNTING INSULATOR

Delbert Blinn mounting insulators are precision molded of Microlon "202" and provide a practical, compact and economical method for mounting and insulating all standard heat sinks.

These insulators are capable of continuous operation to 175° C. and have a dielectric strength of 340 V/MIL.

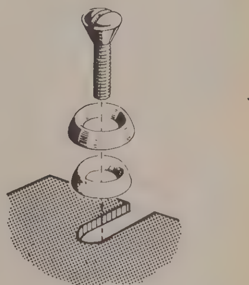
CATALOG SERIES — HSM

NYLON CUP WASHER FILLERS

Employed as insurance against damage, these quality fillers are molded from high strength Polyamide (nylon) and guarantee chip and crack free panel installation.

Available in Nos. 6, 8, 10 and 12 screw sizes.

CATALOG SERIES — NWF



Many other heat sink, transistor pad and specialty items not shown above are available.

Write for additional information.

When custom designs or modifications of standard electronic hardware parts are needed, our years of experience in the molding, extruding, stamping and fabrication of metal and plastic parts enables us to supply you with parts unsurpassable in quality.

We can help you successfully meet competition in today's highly competitive market.

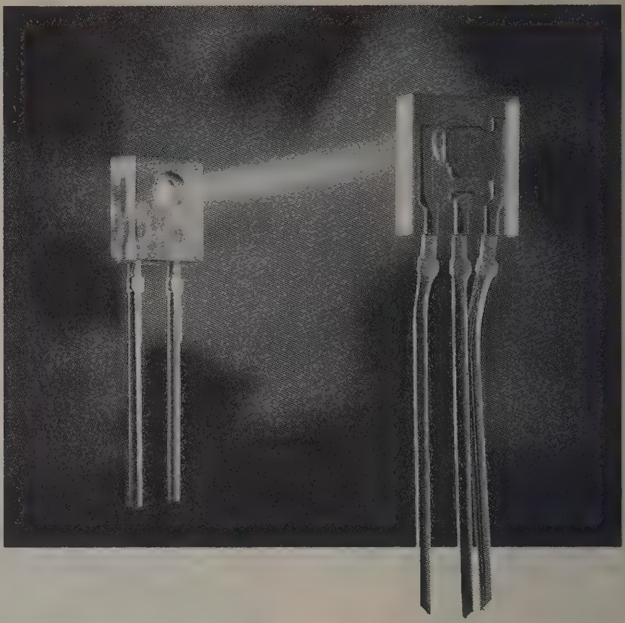
YOU WANT TO PROTECT YOUR IC'S

As integrated circuits grow more sophisticated, the risk of failure from voltage transients grows, too. But now you can protect your IC's with the world's first effective, low cost varistor designed specifically for 5-volt logic levels — the low voltage GE-MOV® II Varistor.

We've extended the GE-MOV II Varistor line from 5.5 volts dc up to 2,800 volts (RMS) . . . energy ratings from .07 to 10,000 joules . . . and peak current ratings from 40 to 70,000 amperes. Now GE-MOV II Varistors provide all the transient protection you need for data communications, consumer electronics, business machines, personal computers and telecommunications . . . as well as for higher voltage industrial applications. Write for our free low voltage varistor design kit.



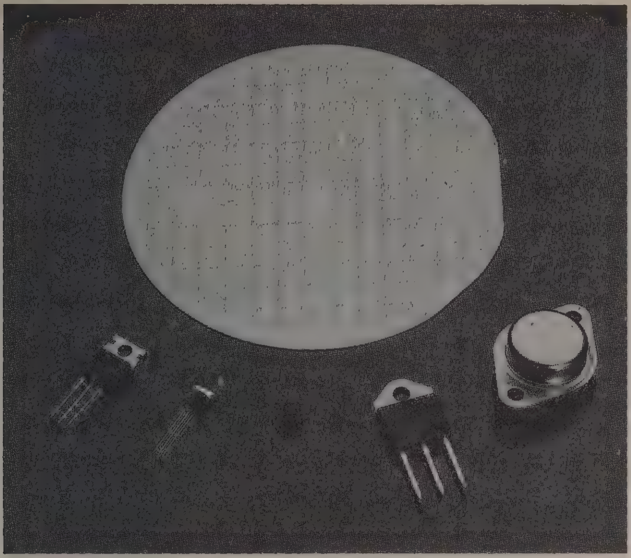
YOU WANT TO SIMPLIFY YOUR CIRCUITS

Few companies offer you more ways to design in quality and reliability with optoelectronics than General Electric. And your options are still growing.

Example: GE's new H23L emitter-detector pair improves board flexibility and economy in digital systems with optical sensing by incorporating a Schmitt trigger directly into the detector. Result — a clean, noiseless signal without added circuitry or components.

Another example: GE's new L14N/P high sensitivity detector lets you utilize more of the available light signal. Now you can design systems to operate at lower light levels, or with greater distances between components, or with lower transmitter power consumption.

And remember: GE's unique liquid phase epitaxial IRED process enables all of your GE optoelectronics components to keep working like new long after other devices no longer can. Write General Electric for free samples of our new optoelectronic products.



YOU WANT TO MULTIPLY YOUR DESIGN OPTIONS

AND WE WANT TO HELP

In 1983, General Electric added more than 30 new power semiconductor devices.

We've added a complete new line of Power MOSFETs with over 150 ratings, 0.2 to 40 amperes in TO-237, TO-220, TO-218, TO-3 and 4 P-I-N DIP packages. And a second source line for the popular IRF series.

We've added a new power MOSIGT that combines the best of both MOSFETs and bipolar devices. The MOSIGT gives you the high input impedance and voltage-controlled turn on-off capability of a MOSFET. And the low on-state conduction losses of a bipolar transistor.

In thyristors, we're expanding our inverter offering to include new ACSR modules with ratings from 55 to 90 amperes, voltages up to 1400 volts and t_Q's down to 10 μ sec.

The very latest GE power electronics literature is available in our new Transistor-Diode, Power MOS and Thyristor-Rectifier product manuals. Write for your free copies.

Semiconductors from General Electric.
For more information on any of our innovative product lines, write on your letterhead to General Electric Company, W. Genesee Street, MD 44, Auburn, NY 13021. 222-37.1

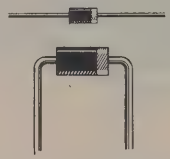
WE BRING GOOD THINGS TO LIFE.

GENERAL ELECTRIC

DIODES

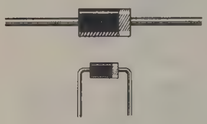
by International©

ICC has created a line of diodes that satisfies a broad range of requirements. Included are Plastic Silicon Rectifiers, Fast Recovery Rectifiers, Bridges, Switching and Zener Diodes. We invite inquiries about the types described here as well as any other diode you may require.



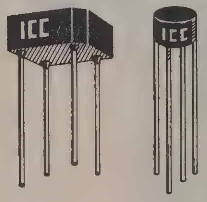
Plastic Silicon Rectifiers — General Purpose Cathode Band I.D.

1N4001 - 1N4007	1.0 AMP - 50V to 1000V	Case DO-41
1N5391 - 1N5399	1.5 AMP - 50V to 1000V	Case DO-15
1N5400 - 1N5408	3.0 AMP - 50V to 1000V	Case DO-27



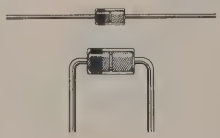
Plastic Silicon Rectifiers — Fast Recovery — 150ns to 500ns Cathode Band I.D.

ICC1001 - ICC1007	1.0 AMP - 50V to 1000V	Case DO-41
ICC1501 - ICC1507	1.5 AMP - 50V to 1000V	Case DO-15
ICC3001 - ICC3007	3.0 AMP - 50V to 1000V	Case DO-27



Bridge Rectifiers

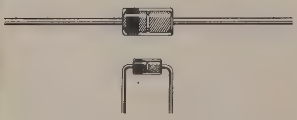
BRR101M - BRR107M	1.0 AMP - 50V to 1000V
BRR151M - BRR157M	1.5 AMP - 50V to 1000V



Silicon Switching Diodes — Cathode Band I.D.

1N4148 - 1N4536

- Peak Inverse Voltage 25V to 75V
- Reverse Recovery Time 2.0ns to 4.0ns
- Capacitance - 2.0 pF to 4.0 pF
- Case DO-35



Zener Diodes — Cathode Band I.D.

1N5231B - 1N5257B	0.5 watt	5% Tolerance	Case DO-35
1N4733A - 1N4752A	1.0 watt	5% Tolerance	Case DO-41

Packaging

Index of symbols

α — Conduction angle
C — Capacitance
I_F — Forward (DC) current
I_{FAV} — Average forward current 40 to 1,000 Hz of one halfsine wave at T_{amb} or T_{case}
I_{FSM} — Surge forward current, peak value 10 ms
I_Z — Zener (reverse) current
I_R — Reverse current, maximum value at T_j and U_{RRM}
L — Distance from case
P_{tot} — Total power dissipation
R — Resistance
t_{rr} — Reverse recovery time, typical value
T_{amb} — Ambient temperature
T_{case} — Case temperature
T_j — Junction temperature
T_L — Lead temperature
T_{op} — Operating temperature
T_{stg} — Storage temperature
U_{BR} — Breakdown voltage
U_F — Forward voltage drop, maximum value at rated I_F
U_{RMS} — RMS voltage
U_{RRM} — Repetitive Peak reverse voltage
U_{RSM} — Peak reverse voltage, 10 ms
U_Z — Zener (reverse) voltage

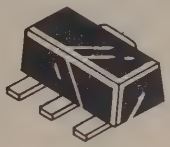
SURFACE MOUNT ALTERNATIVES FOR DISCRETE DEVICES

TO-236AA

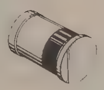
SOT-23

CASE 345-1



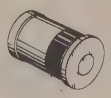
SOT-89

CASE 362



MLL34

CASE 362B



MLL41

A wide variety of discrete components from Motorola's repertoire of reliability-proven semiconductor processes and geometries are available in the SOT (Small-Outline Transistor) packages and leadless diodes. Products include Bipolar and Field-Effect Transistors (FETs); Switching, Zener and Varactor Diodes; and Silicon Controlled Rectifiers (SCRs). These surface-mounted devices are currently being used by circuit designers on printed circuit boards as well as ceramic substrates.

Significant features of surface mount devices include:

- Complete Pretest Capability — 100% electrically tested.
- Handling and Assembly Ease — devices can be positioned manually or by using automated placement equipment.
- Reliability — SOTs are subjected to the same rigid reliability tests performed on all Motorola plastic packages.
- Small Size/Less Weight — considerable size reduction and weight saving is achieved in circuit designs using "SO" surface mount technology.
- Broad Line — Motorola offers over 250 standard discrete devices in the SOT package (inquiries regarding customers special requirements are invited).
- Full Line of Rectifiers and Zeners — Available in Case 362 and Case 362B packages.
- Leadless Diode Devices — Available in 8 mm tape and reel for automatic placement.
- Marking Capability — A multi-digit code is laser marked on all SOT devices.
- Multi-Sources — There are many U.S. and foreign sources of SOTs.
- Packaging — SOTs are shipped in vials or via the industry accepted 8 mm tape and reel format for automatic placement.
- Standard SOT-23 versus "Low Profile" SOT-23 — Motorola offers both the standard SOT-23 outline (TO-236AA) and the new "low profile" SOT-23 (TO236AB). The only difference is the clearance from the bottom of the package to the surface of the substrate:

  Standard SOT-23: 0.004″ Min./0.0098″ Max.
  "Low Profile" SOT-23: 0.0005″ Min./0.004″ Max.

  The low profile package is primarily designed for customers using double-sided PCB with the SOT-23s mounted on the bottom side of the board and the non-surface mounted devices inserted in the top side of the board.
- Higher Power TO-220 and Case 77 Devices — Available with lead forming for surface mount application. (Consult factory)
- Selector Guide — Send for your copy of Motorola's "Surface Mount Selector Guide and Cross-Reference" (BR-127 Rev 1) for additional information.

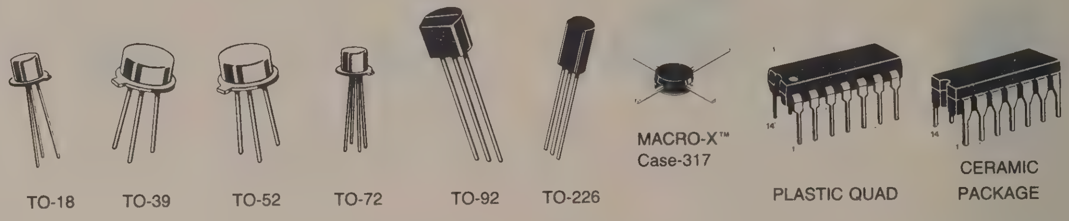
SMALL-SIGNAL TRANSISTORS

Motorola offers a broad line of small-signal transistors. This includes both Bipolar and Field-Effect Transistors. That encompasses the latest technology for semiconductors.



- TO-92 is offered in the standard package as well as the 1.0 W TO-92 for higher power dissipation applications. These devices are laser marked for ease of identification. They can be shipped in bulk or in tape and reel configuration. Lead forming to TO-5 configuration is also available. All plastic devices are shipped in antistatic containers as part of Motorola's ongoing practice of maintaining the highest standards of quality and reliability.
- Small-signal metal can transistors are designed for general-purpose amplifiers, high-speed switches, high-voltage amplifiers, low-level/low-noise amplifiers, high frequency amplifiers, choppers and Darlingtons. These devices are manufactured in a variety of metal can packages. Motorola is the leader in JAN, JANTX, JANTXV and JANS qualified devices.
- Surface mount SOT-23 and SOT-89 packages are available to meet the requirements of the surface mount assembly industry. These packages offer ease of automatic handling, proven high reliability, small size and weight reduction. A full line of product is offered including general-purpose, switching, VHF/UHF amplifiers, mixers, oscillators, choppers, Darlington, low-noise, high-voltage, RF and junction FETs. The packages are laser marked for legibility and shipped in either antistatic bags or conductive 8 mm tape and reel.
- Field-Effect Transistors encompass the latest technology and covers the full range of small-signal FET applications. Available products include a variety of junction FETs, GaAs FETs, MOSFETs (with both P- or N-channel polarity with both single and dual Gates) and TMOS FETs. This product line includes devices designed for operation across the frequency range from dc to UHF in switching and amplifying applications.

  Various package options are available from low cost plastic to TO-72 metal can.
- Multiple devices* are available in plastic, ceramic and metal can packages. A large selection of quad, dual and Darlington transistors are available for off the shelf delivery. Most of the popular discrete transistor chips are available in multiple packages.

  *Multiple devices as referred to here are two or more transistor chips in a single package. This includes the Darlington transistors which consist of two interconnected devices functioning as a single amplifier.

For additional information, the Motorola Small-Signal Transistor Data Book, DL126, is available with data sheets for all available devices. The Microminiature Products is a selector guide for surface mount SOT-23 and SOT-89 products. The Field-Effect Transistors Selector Guide & Cross Reference is available for FET design.

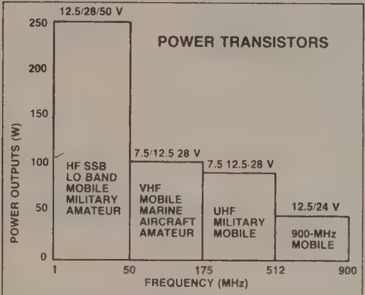
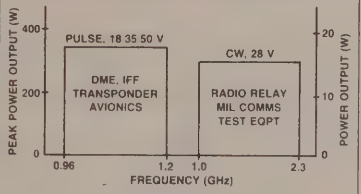
RF COMPONENTS

The Motorola broad line RF component portfolio encompasses small-signal low-noise devices to high-power transmitter devices, unencapsulated chips to packaged transistors to hybrid modules. Device technology covers silicon bipolars, TMOS power FETs, and GaAs FETs. We have a complete engineering staff to help you with your application and extensive technical literature in application notes, engineering bulletins, selector guides, and the RF data manual. For RF components think Motorola RF.



Motorola's RF Power Bipolar and TMOS Field-Effect Transistors are categorized according to the application and frequency band for which each type is optimized. Outputs up to 250 watts are available, suitable for commercial, military, ground, airborne, and marine use from 1.5 MHz to 1 GHz

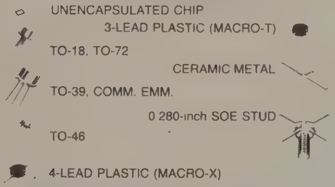
MICROWAVE POWER TRANSISTORS



The Motorola line of microwave power transistors are engineered for ruggedness and consistency of performance from unit to unit, lot to lot. Gold metal systems and silicon nitride passivation ensure reliability. Both hermetic and organic sealed packages provide cost effective options to suit the end-use environment. Internal input output impedance matching elements facilitate broadband designs

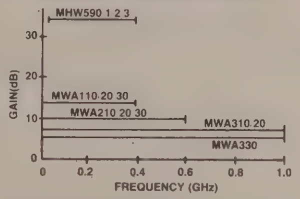
SMALL-SIGNAL/LOW-NOISE

BIPOLARS WITH f_T TO 8 GHz, GaAs FETs to 2 GHz AND ALL THE PACKAGES



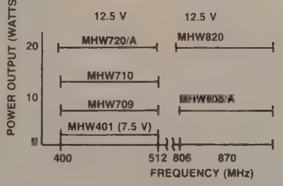
Small-signal high-frequency Bipolar and GaAs Field-Effect Transistors from Motorola are characterized as low-noise amplifiers, oscillators, high-speed switches and class A linear amplifiers. The broad line of low power RF transistors range from low cost consumer devices to full military processed high reliability devices. Packaging options include plastic/ceramic stripline, metal can, and unencapsulated chips to suit performance and cost requirements.

GENERAL-PURPOSE MODULES



The MHW590/1/2/3 are derivatives of the CATV module family and offer two frequency ranges, 1.0-250 MHz/10-400 MHz, and two operating voltages, 13.6/24 V. They are suitable for operation in 50 to 100 Ω systems
The MWA wideband amplifiers in TO-39 packages provide a cost-effective alternative to complex feedback designs using discrete transistors. Consistent performance and unconditional stability of the MWA's take the pain out of broadband high-gain circuit design.

POWER HYBRID MODULES



Power Hybrid Modules are self-contained Power Amplifiers which provide a pre-engineered, functional performance-tested alternative to the use of individual power transistors. Producing VHF/UHF power outputs up to 20 W, these modules offer field-replaceable, consistent performance, and tolerance to load mismatch.

* Indicates devices with speed-up diode for use in high frequency inverters and pulse width modulated motor controls.

SMARTpower™ is a technology that combines integrated circuits on a power control device. The unique feature is that vertical current flow is controlled rather than lateral current flow that is conventionally used in lower power circuits.

The MPC100, 102 and 104 are 5, 12 and 15 V monolithic series-pass regulators capable of supplying 10 A. Features include current limit, thermal shutdown, low differential voltage as well as excellent input and load regulation.

RECTIFIERS

Offering the user a broad line of rectifiers to fit all design requirements is what made us the unquestioned leader in this field. And quality, reliability and competitive prices are what keep us there.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

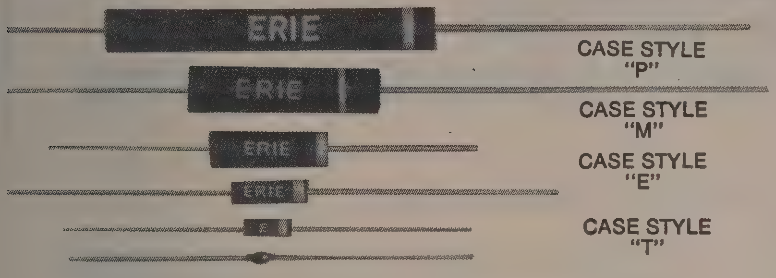
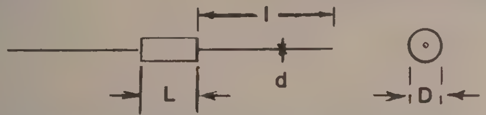
high voltage silicon rectifiers fast recovery, HX / low leakage, HV

muRata ERiE
MURATA ERIE NORTH AMERICA, INC.



ACTUAL SIZES



Murata Erie high voltage silicon rectifiers are available with peak reverse voltage ratings from 1KV to 30KV, in either transfer molded or epoxy protected packages. Features include nanoampere leakage, compact design and high reliability over a wide temperature range. These rectifiers have found applications in numerous military, industrial and aerospace projects.

ECG® Sylvania
Universal Replacement Semiconductors

Maintenance — Routine Preventive Maintenance
Repair — Repair of Equipment Failures
Operations — Plant/Equipment Renovations

TRANSISTORS	69 case styles to fit almost every application
Bi-Polar Types	Both Silicon and Germanium
Complementary Pairs	Up to 200 watts, up to 1500 volts
Bi-Polar Selector Guide (Silicon & Germanium)	
RF Selector Guide	Covering RF Power devices to 870 MHz
Field Effect Transistors (FET)	Both single and dual gate devices. Suitable from audio through UHF
Darlington Power Transistors	Gain up to 90K, power up to 250W, IC to 50A
DIODES AND RECTIFIERS	42 case styles for most applications
General Purpose	Both Silicon and Germanium
PIN Diodes	For fast switching
HV Rectifiers	Voltages to 45,000 volts
Varistors (Temperature Compensating Diodes)	Biasing diodes to achieve stability
Varistors (Voltage Compensating Diodes)	
Varactors (Variable Capacitance Diodes)	For tuning, AFC
Bridge Rectifiers	1 Amp to 40 Amps, up to 1000 volts
HV Rectifiers (Avalanche Silicon)	High voltage and high current
ZENER DIODES	From ½ to 50 watts, from 2.4 to 200 volts, axial and stud cases
INDUSTRIAL RECTIFIERS	From 3 to 2200 Amps up to 1600 volts
SILICON CONTROL RECTIFIERS (SCR)	
Phase Control	0.8 to 1880 Amps, voltages to 1200v
Switching	Frequencies to 16 kHz
TRIACS	0.8 to 40 amperes, with voltages up to 1000v in a variety of case styles to accommodate most applications
MICROPROCESSORS/RAM's	Seven popular microprocessors and their peripherals

ECG® Sylvania Universal Replacement Semiconductors

LINEAR INTEGRATED CIRCUITS

- Linear IC and Module Circuits

Op amps, wideband amplifiers, single and dual comparators, voltage regulators, VCO's, Audio PO's, zero crossing switches and timing circuits. Some in choice of package styles.

OPTO-ELECTRONIC DEVICES

- Discrete LED Indicators
- Infrared Emitting Diodes
- Phototransistor Detectors
- Optoisolators
- Opto Interruptors
- Bar Graph & LED Arrays

Red, orange, green, yellow and IR, in both narrow and wide angle. Photo-transistors to cover the IR and visible spectrum. Optoisolators with transistor, Darlington, SCR or TRIAC outputs. Both 1 and 2 digit numeric displays.

INTERFACE INTEGRATED CIRCUITS

- Display Driver Circuits
- Display Driver Outlines

Analog and digital IC's for both decoding and driving from both CMOS and TTL logic.

DIGITAL INTEGRATED CIRCUITS

- CMOS
- TTL (Including 74C CMOS Series)
- DTL
- HTL
- RTL
- HLL

4000, 4500 series and 40000 series.
74C, 74L, 74H, 74LS, 74S and 7400 series.

ECG Semiconductors

Master Replacement Guide

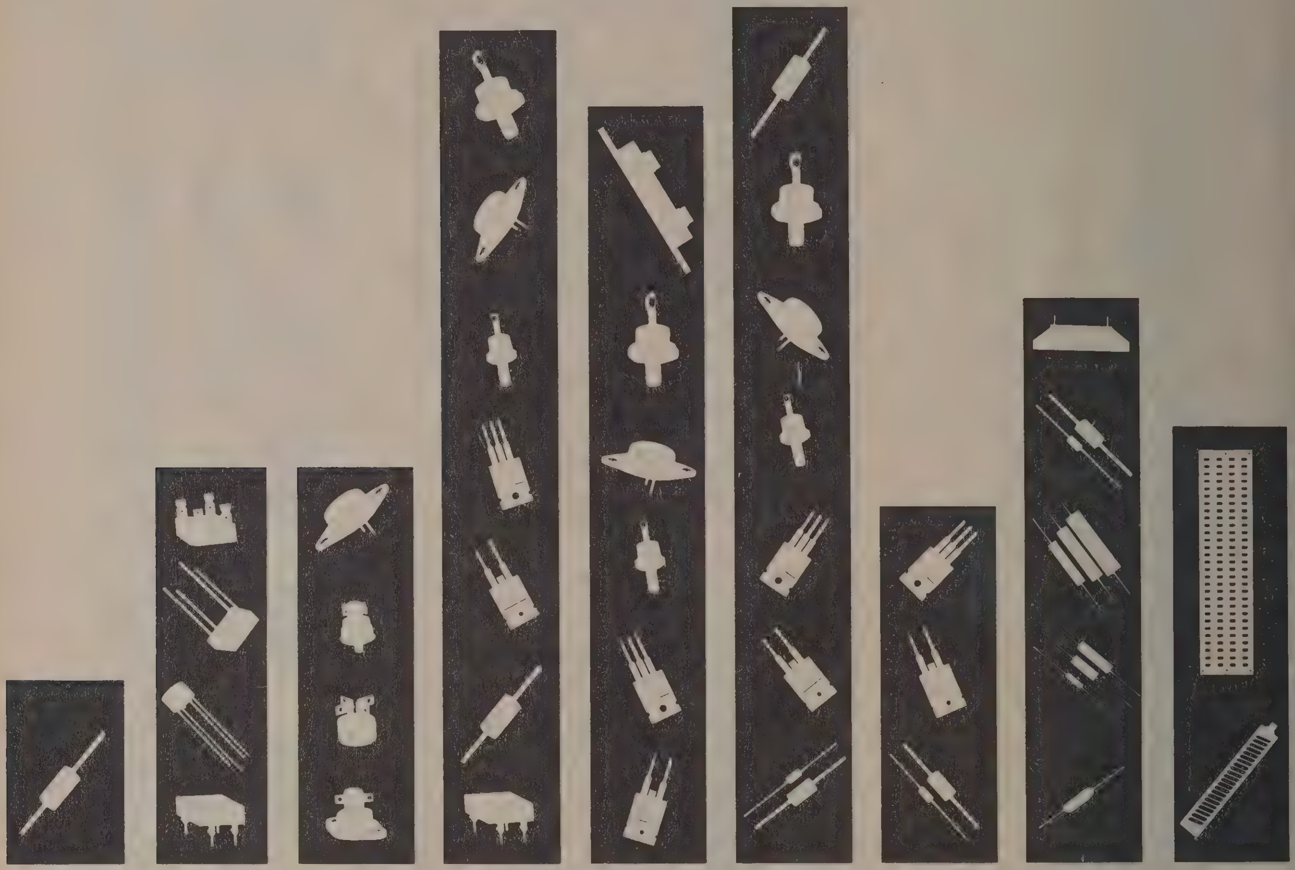
Power. Speed. Packages.

Varo offers you the best choice of silicon rectifiers and bridges.



Epoxy Axial Lead: V3 Series; 3a w/100-200a surge; 50v to 1000v; Fast Recovery (200 ns)

Epoxy Bridge: VM, VE, VS, VH, VJ, VK Series; 1a-30a; 25v to 1000v; Fast Recovery (200 ns)

Integrated Bridge: IN, VT, VY, R700 Series; 10a to 36a; 200v to 600v; Fast Recovery (200 ns)

Schottky Barrier: VSB, VSK Series; 750ma-60a; 20v to 45v; Ultra Fast Recovery (< 10 ns)

High Temp Schottky: VSK Series; 10a to 200a; 20v to 60v; Ultra Fast Recovery (< 10 ns)

EPI High Efficiency: VHE Series; 1a to 70a; 50v to 200v; Fast Recovery (35-50 ns)

Very Fast Recovery: TG Series; 1a to 16a; 400v to 1000v; (100 ns)

HV Silicon: H, VA, VB, VG, VF, VC Series; 3ma to 2a; 1kV to 50kV; Fast Recovery (100-250 ns)

HV Assemblies: H series; X-Ray; Pollution Control; 7 kV to 360kV; Fast Recovery (100-250 ns)

VARO

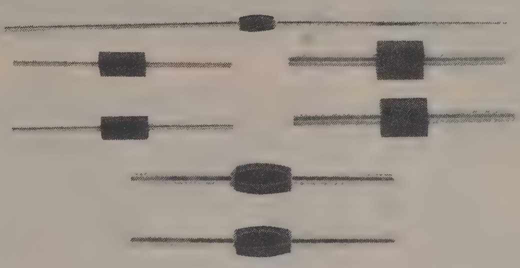
The World's Leading Rectifier Company

For application information, specs or a sample device, call 214/271-8511
VARO Semiconductor Box 469013 Garland, TX 75046-9013 TWX 910-860-5178

© 1983 Varo Semiconductor/5352

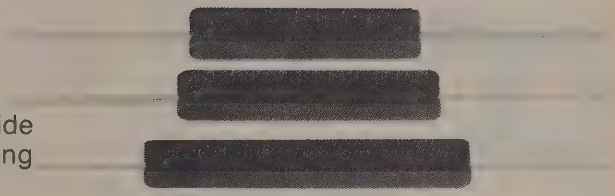
HIGH VOLTAGE DISCRETES 1.5 KV to 10 KV

- 25 MA - 80 MA to 100 NS Recovery Time (Body Size .090" x .250")
- 100 MA - 250 MA to 100 NS Recovery Time (Body Size .125" x .250")
- 500 MA - 2 AMP to 100 NS Recovery Time (Body Size .200" x .250")



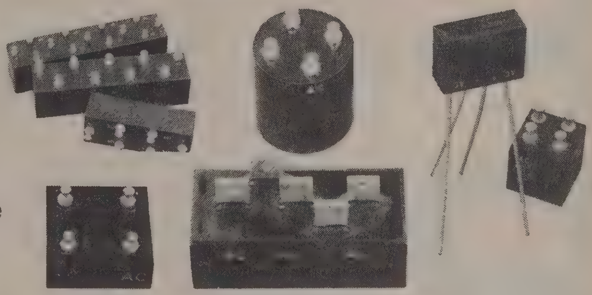
HIGH VOLTAGE RECTIFIER STACKS

Stacked High Voltage Discretes repotted to provide the PIV needed. Size made depending on operating in air or oil media.



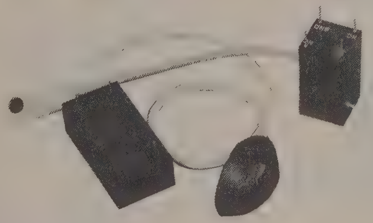
HIGH or LOW VOLTAGE ASSEMBLIES

Single bridge or multiple bridge configurations available or to your package criteria. Low voltage with or without MIL QPL Rectifiers.



HIGH VOLTAGE MULTIPLIERS

Multipliers made with number of stages to yield output to 150 KV+.



CUSTOM PACKAGING/PROCESSING

- Packaging can be tailored to characteristics and space.
- Processing of discretes or assemblies can be to specs or MIL.

abbott TRANSFORMERS

60 Hz Power Transformers

MODEL 6B

SPECIFICATIONS

INPUT PRIMARY: 115 VAC standard. 230 VAC at 10% additional cost. Specify by suffixing "A" to model number. 115/230 VAC dual input at 10% additional cost. Specify by suffixing "B" to model number.

INPUT FREQUENCY: 50 to 400 Hz, 1 phase.

REGULATION: 15% max. from no load to full load (6% on units size 8 and larger).

SECONDARY VOLTAGE TOLERANCE: Within 5% of listed output voltage when measured at full load and 115 VAC input.

INSULATION TEST: 1500 VAC.

OPERATING TEMPERATURE: 80°C maximum ambient (70°C on units size 8 and larger).

APPROXIMATE EFFICIENCY: Ranges from 80% to 90%.

CONSTRUCTION: Commercial grade using Silicon Iron for core and heavy insulated synthetic film magnet wire with class "B" rating impregnated with a high quality insulating varnish having a class "H" rating. Other outputs and/or inputs available on request.

INPUT PRIMARY: **WYE:** 120V L-Com. Suffix A
WYE: 208V L-L Suffix B
DELTA: 120V L-L Suffix C
DELTA: 230V L-L Suffix E
DELTA: 440V L-L Suffix F

NOTE: To order a specific input voltage add suffix to model number.
(EXAMPLE: 6D ( ) 15-200E has input 230V L-L (3 wire DELTA)).

INPUT FREQUENCY: 50 Hz to 60 Hz.

OUTPUT: See specific models listed.

OUTPUT VOLTAGE TOLERANCE: Within 5% when measured at full load and nominal VAC input.

REGULATION: 10% max. no load to full load. (6% on size 3 thru 6).

INSULATION TEST: 1500 VRMS

EFFICIENCY: Ranges from 90% to 95%.

OPERATING TEMP.: +80°C ambient max.

CONSTRUCTION: Industrial Grade (open frame): Specify the letter "F" in the model number. (Example: 6DF 15-200 ( )). MIL-T-27D (Grade 5 Class S). Specify the letter "M" in the model number. (Example. 6DM15-200 ( )).

NOTE: MIL-T-27D add .20 to Dim. A, B, C.
Other inputs and/or outputs available.

TRANSFORMERS

60 Hz Transformers

MODEL P

SPECIFICATIONS

INPUT PRIMARY: 115 VAC, 60 Hz ±5 Hz, 1 phase.

REGULATION: 10% no load to full load.

SECONDARY VOLTAGE TOLERANCE: Within 3% of listed output voltage when measured at full load and 115 VAC input.

CONSTRUCTION: To MIL-T-27D, grade: 4 class: "S", Case: steel.

ENVIRONMENT: To operate in 95°C maximum ambient temperature. Encapsulated to meet MIL-STD-810C for vibration, shock, acceleration, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion, and altitude (to a vacuum). NOTE: For high altitude operation, encapsulate terminals.

INSULATION TEST: 1750 VAC.

SECONDARY: See output voltage and current of specific models listed. For 50 Hz operation, reduce secondary current by 10% of ratings listed. These units are capable of 400 Hz operation; however, see Abbott's distinct line of miniature 400 Hz transformers.

abbott TRANSFORMERS

400 Hz Transformers

MODEL E

SPECIFICATIONS

Input Primary
115V, 400 Hz ±20 Hz, 1 phase

Regulation
10% no load to full load

Secondary Voltage Tolerance
Within 5% when measured at full load and 115 VAC input

Construction
To MIL-T-27D, grade 5, class: "S"
Molded Diallyl Phthalate

Environment
Encapsulated to meet MIL-STD-810C, including vibration, ambient temperature ot 85°C, shock, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion, and altitude (to a vacuum).

Output Secondary
See voltage and current of specific models listed.

Other models are available. Contact our nearest office for complete information.

abbott TRANSFORMERS

400 Hz Power Toroid Transformers

MODELS TM TF

SPECIFICATIONS

INPUT PRIMARY: 115V, 400 Hz ±20 Hz, 1 phase for 230V operation add the suffix "A"

REGULATION: 5% or less, no load to full load

SECONDARY VOLTAGE TOLERANCE: Within 5% when measured at full load and 115 VAC input

INSULATION TEST: 1000 VAC

OPERATING TEMPERATURE: MODEL TM 90°C Maximum ambient/MODEL TF 80°C Maximum ambient

APPROXIMATE EFFICIENCY: 90% to 95%

OUTPUT SECONDARY: See voltage and current of specific models listed

CONSTRUCTION: MODEL TF — Open frame, Industrial Grade with Teflon leads 6" long MODEL TM — to meet MIL-T-27D, Grade 5, Class S, MIL-type Designation TF5S03ZZ

OPTIONS: "A" option is for 230V input primary. Add suffix "A" to model number (i.e. TF10-1A). "C" option is for center tapped output. Add suffix "C" to model number (i.e. TF10-1C)

abbott TRANSFORMERS

400 Hz 3 Ø Power Transformers

MODEL 4D

SPECIFICATIONS

INPUT PRIMARY:
WYE: (4 wire) Line to Common 115 VAC
WYE: (3 wire) Line to Line 200 VAC
DELTA: (3 wire) Line to Line 115 VAC (see option "A")
DELTA: (3 wire) Line to Line 200 VAC (see option "B")

INPUT FREQUENCY: 400 Hz ±20 Hz.

OUTPUT: See specific models listed.

OUTPUT VOLTAGE TOLERANCE: Within 5% when measured at full load and nominal VAC input.

REGULATION: 10% no load to full load.

INSULATION TEST: 1500 VRMS.

EFFICIENCY: Ranges from 90% to 95%.

OPERATING AMBIENT TEMPERATURE: 80°C Maximum

TEMPERATURE RISE: Less than 50°C.

CONSTRUCTION: To MIL-T-27D, Grade 5, class "S".

ENVIRONMENT: Encapsulated to meet MIL-STD-810C, including vibration, temperature to 80°C, shock, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion. Note: For high altitude operation encapsulate terminals.

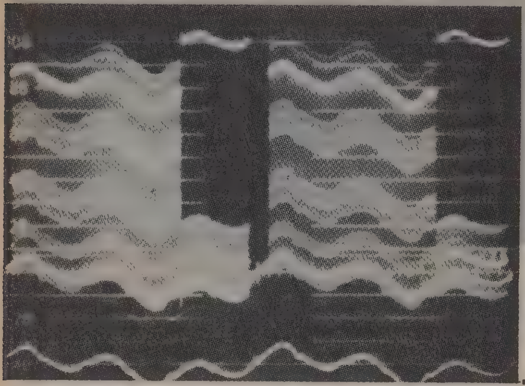
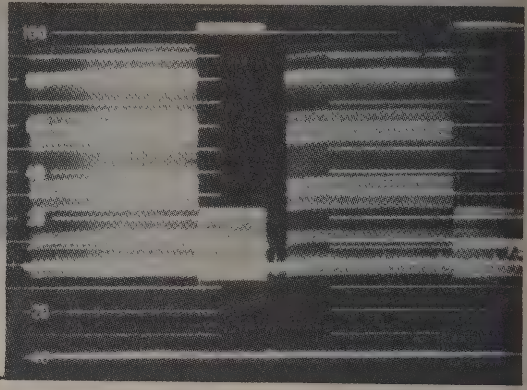
HUM ELIMINATOR HEC1000

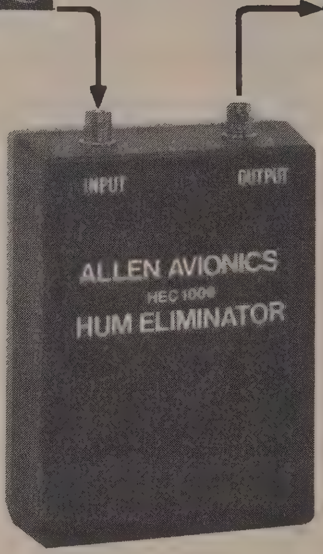


INCOMING VIDEO

OUTGOING VIDEO



ELIMINATES HUM AND OTHER INTERFERENCE in Video Lines caused by differences in Ground Potential



- FLAT - DC to 10 MHz
- For Color and Black & White
- No Low Frequency or High Frequency Roll-Off
- No Differential Gain Distortion
- No Differential Phase Distortion
- Passive Device - Failure Free
- Reversible
- Small Compact Package
- Low Price

IN FIELD:

- Between Remote Truck & Telco
- Between Remote Truck & Microwave
- For Intertruck Hookup
- For VTR Units
- For Monitoring Lines

IN STUDIO:

- Between Buildings
- On long runs in Buildings
- Between Studios & Transmitter
- On incoming Telco Circuits
- On outgoing Telco Circuits

SPECIFICATIONS:

Impedance	75 ohms, unbalanced
Connectors	Type BNC
Bandwidth	DC to 10 MHz (0.6 dB @ 10 MHz)
Hum Reduction	to 50 dB depending on system
Dimensions	5.3″ x 4.0″ x 2.0″ (135 x 102 x 51 mm)
Weight	Approx. 3 lbs. (1.36kg)
Insertion Loss	< 0.2 dB

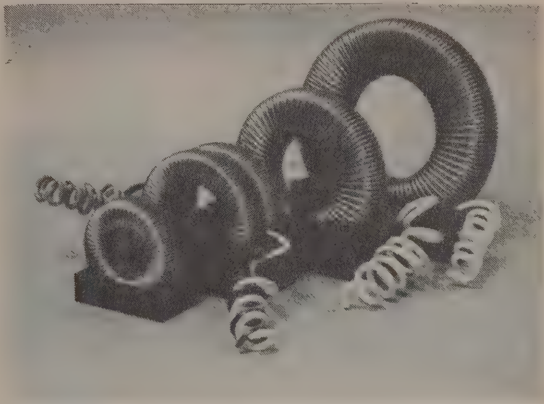
ADVANCED HEAVY DUTY TOROIDAL FILTER INDUCTORS

FOR PROFESSIONAL LIGHT DIMMERS: THEATRICAL, TOURING & ARCHITECTURAL FOR E.M.I/R.F.I SCR CONTROLS, MOTOR CONTROLS, LINE FILTERS, ETC.

- Open • semi enclosed • totally enclosed styles
- Horizontal & vertical mounting
- All "UL" recognizable materials
- From 1,000 to 18,000 watts at 120 v. & 2,000 to 36,000 w. @ 240 v.
- Absolutely latest "State of the Art" materials, production & testing technologies are employed throughout all phases of this product line, which is designed for peak performance.



VERTICAL MTG. SHOWN LEFT TO RIGHT. 10A, DUAL 20A., 50A & 100.A.

TOROIDAL CURRENT SENSE TRANSFORMERS

- Designed for switching power supply applications.
- Cost effective design.
- Operating frequency 20KHZ above.
- Pri Peak current up to 20 amps
- Available with open winding type, pvc sealed, and totally epoxy encapsulated.
- All our SMPS components backed by 19 yrs. of experience.

S.M.P.S. FILTER INDUCTORS

- Minimum possible size
- Performance verified in 25KHZ switching power supply
- Large selection of sizes available
- Available with open winding type or encapsulated and semi-encapsulated constructions.
- Custom designs are available up to 200 AMPS.
- Advanced materials
- Best production technologies, with 19 yrs. of SMPS expertise

1900 CHRIS LANE / ANAHEIM, CA 92805 / TEL 714-634-2220/800-392-2292

LARGEST SELECTION OF HEAVY DUTY 50/60Hz TOROIDAL POWER TRANSFORMER

SOME ADVANTAGES OF TOROIDAL POWER TRANSFORMERS COMPARED TO LAMINATED TRANSFORMERS

- Lower mechancial hum
- Lower electrical noise
- Lower magnetic leakage
- Easier to electrostatically shield
- Lower weight
- Smaller dimensions
- Higher efficiency
- And most important price competitive vs. old fashioned laminated transformers

IMPORTANT NOTES:

1. All transformers have been designed for 50/60HZ. .
2. 60HZ & 400HZ. Designs available upon request.
3. Custom designs tailored to your specs. are made & evaluated on a 2 wk. cycle.
4. 100% electrostatic shielding available on all transformers with a small power derating.
5. Magnetic shielding & lower magnetic leakage designs for sensitive areas such as encountered in computers & audio equipment, are available on all transformers.
6. Low profile designs are available upon request.
7. Amecon has the world's most complete toroidal mfg. facilities. We can machine wind toroids in excess of 50" dia. & 2000 lbs.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC	alternating current
A/D	analog to digital
ADC	analog to digital converter
ADP	automatic data processing
AF	audio frequency
AFC	automatic frequency control
ALGOL	algorithmic language
AM	amplitude modulation
AND	a logical operator
AQL	acceptable quality level
ASCII	American national standard code for information interchange
AWG	American wire guage

B

BALUN	balanced to unbalanced
BASIC	beginners' all-purpose symbolic instruction code
BCD	binary-coded decimal
BNC	baby "N" connector
BUS	basic utility system

C

CAD	computer aided design
CAM	computer aided manufacture
CATV	cable television or community antenna television
CERMET	ceramic metal element
Comm.	communications
CMOS	complementary metal-oxide semiconductor
CPS	characters per second
CPU	central processing unit

D

D/A	digital to analog
DAC	digital to analog converter
DC	direct curent
DIL	dual in-line
DIP	dual in-line package
DPM	digital panel meter
DTL	diode transistor logic

E

EDP	electronic data processing
EBCDIC	extended binary coded decimal interchange code
EEPROM	electrically erasable PROM
EMC	electromagnetic compatibility
EMI	electromagnetic interference
EPROM	electrically programmable ROM
ESR	equivalent series resistance

F

FEP	fluorinated ethylene propylene Copolymar, 200° Teflon
FET	field-effect transistor
FM	frequency modulation
FORTRAN	formula translator

G

GaAsFET	gallium arsenide field effect transistor
GPIB	general purpose interface bus

H

HF	high frequency (3 to 30 MHz)
HIPOT	test, measurement and diagnostic equipment
HLL	high level language
HV	high voltage
Hz	Hertz

I

IC	integrated circuit
IF	intermediate frequency
IO	input/output (devices)
IR	insulation resistance (or) infrared

J

JFET	junction field effect transistor
JMOS	junction metal oxide semiconductor

K

kHz	kilohertz (10^3 hertz)
KSR	keyboard send receive

L

LC	inductance capacitance
LCD	liquid crystal display
LED	light-emitting diode
LF	low frequency (30 to 300 kHz)
LSI	large scale integration
LVDT	linear velocity displacement transformer

M

MATV	master antenna television
μF	microforad
MHz	megahertz
MOS	metal oxide semiconductor
MOSFET	metal oxide semiconductor field effect transistor
MOV	metal oxide varistor
MPU	microprocessor unit
MSI	medium scale integration

N

NBS	National Bureau of Standards
NIM	nuclear instrumentation module
NOR	not OR

O

OEM	original equipment manufacturer
OR	a logical operator

P

pF	picofarad
PC	printed circuit
PCB	printed circuit board
PIN	positive-intrinsic-negative (transistor)
PLA	programmable logic array
PPI	plan position indicator
PROM	programmable read only memory
PUT	programmable unijunction transistor

Q

QAM	quadrature amplitude modulation
Q (meter)	quality-factor meter

R

RAM	random access memory
RC	resistance-capacitance
RFI	radio frequency interference
RMS	root mean square
ROM	read only memory
RF	radio frequency
RFC	radio-frequency choke
RFI	radio-frequency interference
RTD	resistance-temperature detector
RTL	resistor transistor logic
RTV	room temperature vulcanizing
RW	read/write

S

SAS	silicon asymmetrical switch
SBC	single board (micro) computer
SBS	silicon bilateral switch
SCR	silicon-controlled rectifier
SIP	single in-line package
SSI	small scale integration
SSR	solid state relay
STL	Schottky transistor logic

T

TC	temperature coefficient
TCXO	temperature compensated crystal oscillator
TFE	tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL	transistor-transistor logic
TTY	teletypewriter

U

UHF	ultra high frequency (300 MHz to 3 GHz)
UL	Underwriters Laboratory
UPS	uninterruptible power supply

V

VAC	volts (of) alternating current
VAR	volt-ampere reactive
VCR	video cassette recorder
VDC	volts (of) direct current
VHF	very high frequency
VHSIC	very high speed integrated circuit
VLF	very low frequency (3 to 30 kHz)
VLSI	very large scale integration
VRM	voice recognition module
VTVM	vacuum tube volt meter
VU	volume unit
VSWR	voltage standing wave ratio

W

WPS	word processing software

Y

YIG	yttrium iron garnet

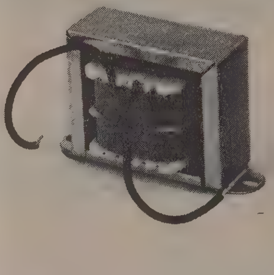
ARSTAN

POWER TRANSFORMERS TO 100 WATTS OUR SPECIALTY

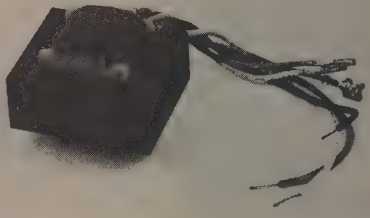
Our products are manufactured in the **FAR EAST** and are competitively priced. We can cross reference to standard designs or our engineers will help you select the features which will best fit your application.

AVAILABLE FEATURES

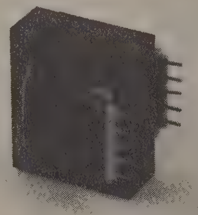
- ☐ Any combination of output voltages and load currents
- ☐ Single and dual primaries 120/240 volts
- ☐ 50/60 Hz operation
- ☐ Single or split secondaries
- ☐ Split bobbin or concentric winding
- ☐ Vertical or horizontal mounting
- ☐ Leads or terminals
- ☐ Specified breakdown voltage 500-3500 VAC
- ☐ High efficiency, specified power dissipation
- ☐ Designed to meet UL/CSA/VDE as required



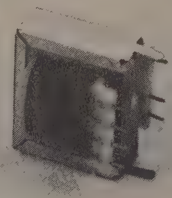
STYLE HMV



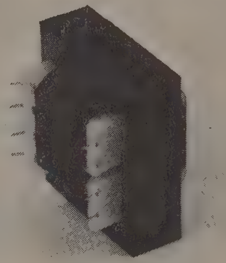
STYLE HMH



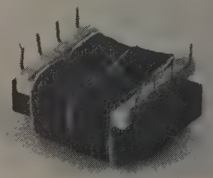
STYLE PCV1



STYLE PCV2



STYLE PCH



STYLE PCL

STYLE AND SIZE SELECTION GUIDE (SIZE IN INCHES — LxWxH)

POWER VA	HMV/HMH	PCV	PCH	PCL
1 - 1.5	⁎	1.375 x 1.125 x 1.187	1.375 x 1.125 x .937	⁎

ARSTAN AC TO AC AND AC TO DC WALL PLUG-IN ADAPTERS

Our products are manufactured in the **FAR EAST** and are competitively priced. Selection available from a variety of designs which are UL/CSA recognized or have our engineers help you select a custom design for your application.

AVAILABLE FEATURES

- ☐ Any combination of voltage and load current
- ☐ Selection of input voltages for domestic or overseas use
- ☐ Center tap for AC adapters
- ☐ Specified regulation
- ☐ Selection of cords and connectors
- ☐ Table top option for large adapters
- ☐ UL/CSA recognized or designed as required

SIZE SELECTION GUIDE

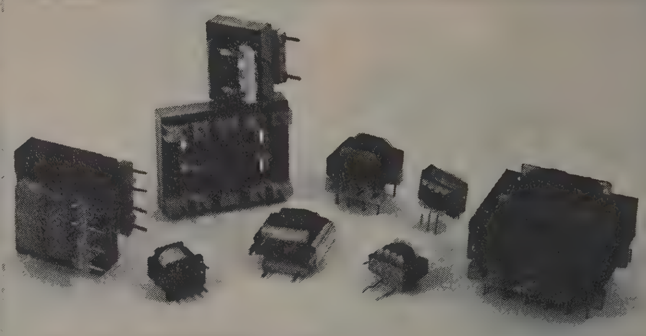
ARSTAN QUALITY INDUCTIVE COMPONENTS

Large variety of standard and custom designed components. Technical expertise and design assistance here as well as competitive prices from our factories in the **FAR EAST.**

TRANSFORMERS FOR AUDIO, COMMUNICATIONS AND TELEPHONE APPLICATIONS

We can cross reference to standard designs or our engineers will help you select the features which will best fit your application.



AVAILABLE FEATURES

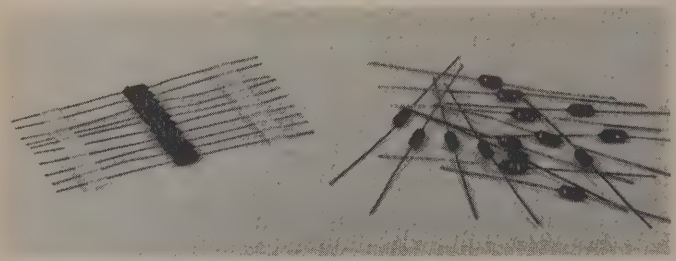
- ☐ Choice of input/output impedance
- ☐ Optimum tradeoff between DC current, DCR insertion loss, frequency response and return loss
- ☐ PC board plug in
- ☐ Flat frequency response and more efficient power transfer for audio transformers

TYPICAL AVAILABLE DESIGNS

	A	B	C
Input/output impedance	600/600 ohms	600/600 ohms	10,000/50 ohms
Insertion loss	1.0 db	2.5 db	3 db
Frequency response	± .5 db	± .5 db	± 1 db
DC current	100 mA	0	0
DCR	40/40 ohms	180/80 ohms	300/10 ohms
Return loss	26 db	———	———

AXIAL CHOKE INDUCTORS

We have a full line of molded choke inductors for unwanted signal suppression and a variety of other applications.



AXIAL COIL SPECIFICATIONS

Inductance range	.22-1000 microhenry
Tolerance	± 10%
DCR range	.1-20 ohms*
Min Q range	35-50*
DC current range	100-3000 MA*
Temperature range	-20 to +90°C
Coating	Epoxy
Leads	Tinned copper

*Depends on inductance value

FIXED AND VARIABLE INDUCTORS

A variety of inductors and high frequency transformers for a wide array of applications.

BH Electronics, Inc.

A UNIT OF **BMC** INDUSTRIES, INC.

PRODUCTS SUMMARY	APPLICATION
Pulse Transformers	Data Transmission, High Frequency Coupling
Trigger Transformers	SCR Trigger, Motor Speed Controls
Flyback Transformers	High Voltage CRT, Spark Gap Ignition, High Voltage Power Supplies
Power Transformers	Instrumentation, DC Power Supplies, Control Circuits.
Low Power Step-up Transformer	Neuro Stimulators, Infant Monitors, Implantable Medical Electronics
DC-DC Converters	I.C. Bias Circuits, Miniature Power Supplies, Aerospace Instruments
Switching Magnetics	State of the Art DC Supplies, High Frequency Inverters & Converters
Audio Transformers	Telephone Industry, Communications, Impedence Matching
Potted Transformer Assemblies	Medical Devices, Hazardous Environments, High Reliability Military

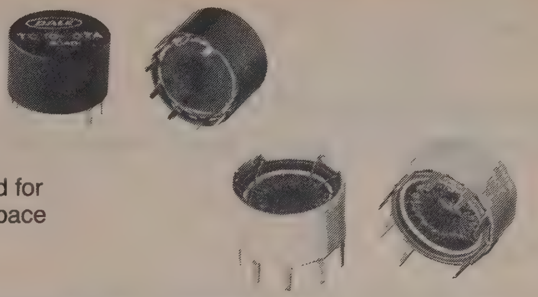
DALE®

TC CONVERTER TRANSFORMERS



FEATURES

- High conversion efficiency from DC input to filtered DC output
- Designed especially for low-power solid state circuits
- Designed for mounting on printed circuit boards
- Miniature size for minimum space
- Choice of encapsulated or open (impregnated) styles

SPECIFICATIONS

ELECTRICAL

Transformer Power Rating: 3 watts

Isolation, Primary-Secondary: 500 volts 60 Hz, operating characteristics may be varied to suit specific applications by appropriate selection of circuit components

ENVIRONMENTAL

Operating Temp. Range: −20°C to +80°C, intended for use in enclosed commercial and industrial applications

MECHANICAL

Coating: Varnish dip coat or epoxy encapsulated

Terminals: .015″ thick, solder plated, varnish-free. Intended for P.C. board mounting

TYPICAL APPLICATIONS

Power supply for gas discharge display, battery-operated portable instruments, operational amplifier power supplies.

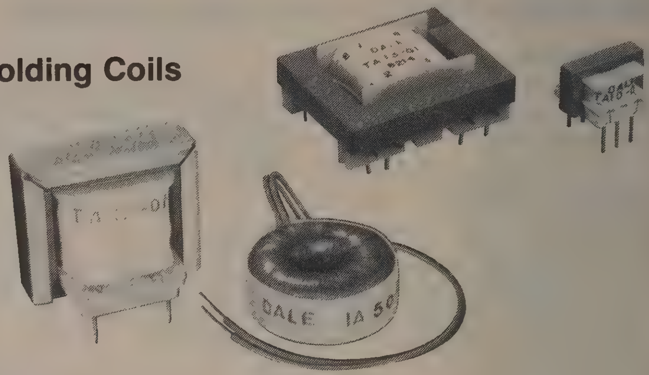
DALE®

TA and IA SERIES

Telephone Coupling Transformers and Holding Coils



FEATURES

- Designed and built to meet telephone company requirements for data and voice access on leased private telephone lines or through the dial-up switched telephone network.
- Provides line isolation, impedance matching, line balance, hybrid and holding coil applications.

SPECIFICATIONS

ELECTRICAL

Frequency Response: ±.5 DB from 300 to 3500 Hz

Power Level: −45 DBM to +7 DBM

Impedance Matching: ±10% from 300 to 3500 Hz

Return Loss:
22 DB min. = TA 10-03
13 DB min. = TA 13-01
14 DB min. = TA 14-01
26 DM min. = TA 10-01, TA 10-02, TA 10-04, TA 10-05, TA 10-06, TA 10-07, TA 11-01

Longitudinal Balance: Per FCC 68.310

Distortion: .5% max.

MECHANICAL

Coating: TA = Vacuum impregnated with polyester varnish.
IA = Tough vinyl coating.

Terminals: TA = Precision spaced PC type plug-in terminals.
IA = #28 AWG teflon coated insulated terminals.

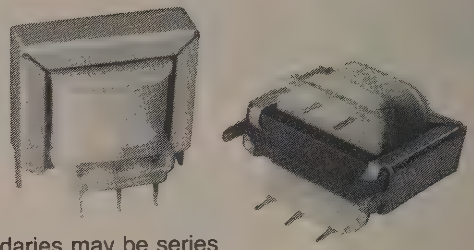
DALE® LOW POWER TRANSFORMERS

PL SERIES (PL-11, PL-12, PL-13, PL-14)

Low Power Dual Secondary Transformers



FEATURES

- P.C. pin mounting
- Precision spaced plug-in terminals
- Laminated construction for low-cost industrial applications, including power supplies, controls and instrumentation
- Recognized under the Component Program of Underwriters Laboratories, Inc. Listed Under File E71961.
- Provides isolation from power line and voltage step down or step up
- Transformer secondaries may be series or parallel connected for twice the voltage or twice the current rating for individual windings
- Mounting brackets available on request at no additional cost. (See drawing.)

SPECIFICATIONS

OPERATING CHARACTERISTICS

Wattage: PL-11 = .75; PL-12 = 1.5; PL-13 = 4.5; PL-14 = 10

Temperature: Class B 130°C max.
Operating: −55°C to +105°C
Storage: −55°C to +130°C

Excitation Current at 115V 60HZ: PL-11, PL-12 = 25 MA max. PL-13, PL-14 = 35 MA max.

Temperature Rise: 25°C max. at rated operating voltages and loads

Dielectric Strength: 1250V 60HZ between primary and secondary windings, and between all windings and core

MECHANICAL

Construction: Laminated, vacuum impregnated

Weight: PL-11 = 35 grams; PL-12 = 100 grams; PL-13 = 160 grams; PL-14 = 240 grams

Terminals: Brass, solder coated

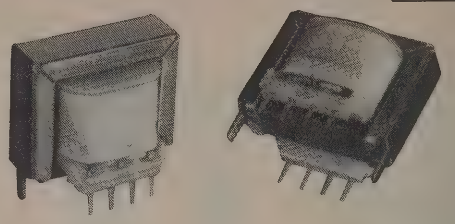
DALE® LOW POWER TRANSFORMERS

PL SERIES (PL-22, PL-23, PL-24)

Low Power Transformers
Dual Primary — Dual Secondary



FEATURES

- P.C. pin mounting
- Precision spaced plug-in terminals
- Laminated construction for low-cost industrial applications, including power supplies, controls and instrumentation
- Recognized under the Component Program of Underwriters Laboratories, Inc. Listed Under File E71961.
- Provides isolation from power line and voltage step down or step up
- Transformer secondaries may be series or parallel connected for twice the voltage or twice the current rating for individual windings
- Dual primary for operation from 115V or 230V 50/60Hz line voltage
- Mounting brackets available on request at no additional cost. (See drawing.)

SPECIFICATIONS

OPERATING CHARACTERISTICS

Wattage: PL-22, 1.5; PL-23, 4.5; PL-24, 10.0

Temperature: Class B, 130°C
Operating: –55°C to +105°C
Storage: –55°C to +130°C

Dielectric Strength:
1500 V 60 Hz between primary and secondary windings and all windings to core

Temperature Rise: 25°C maximum at rated operating voltages and loads

MECHANICAL

Construction: Laminated

Weight: PL-22, 100 grams; PL-23, 160 grams; PL-24, 240 grams

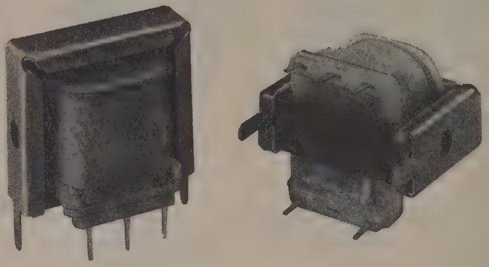
DALE®

LOW POWER TRANSFORMERS

PL SERIES (PL-32, PL-33, PL-34)

Low-Cost Single Secondary Power Transformer, 115 Volt Primary Input



FEATURES

- P.C. pin mounting
- Precision spaced plug-in terminals
- Laminated construction for low-cost industrial applications, including power supplies, controls and instrumentation
- Recognized under the Component Program of Underwriters Laboratories, Inc. Listed Under File E71961.
- Provides isolation from power line and voltage step down or step up
- Mounting brackets available on request at no additional cost. (See drawing.)

SPECIFICATIONS

OPERATING CHARACTERISTICS

Wattage: PL-32 = 1.5, PL-33 = 4.5, PL-34 = 10

Temperature: Class B 130°C max.
Operating: −55°C to +105°C
Storage: −55°C to +130°C

Regulation: 20% nominal

Temperature Rise: 25°C max. at rated operating voltages and loads

Dielectric Strength: Between primary and secondary windings, and between all windings and core. 1250 VRMS 60 Hz.

MECHANICAL

Construction: Laminated, vacuum impregnated

Weight: PL-32 = 100 grams, PL-33 = 160 grams, PL-34 = 240 grams

Terminals: Brass, solder coated

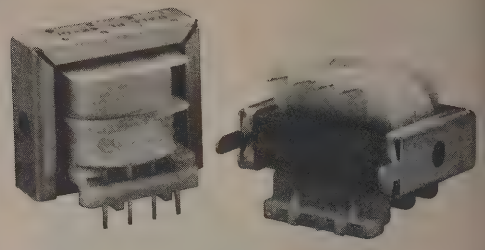
DALE® LOW POWER TRANSFORMERS



PL SERIES (PL-42, PL-43, PL-44)

Low Power Transformers — Dual Primary — Dual Secondary

FEATURES

- P.C. pin mounting
- Precision spaced plug-in terminals
- Split-section windings, meaning increased dielectric between primary and secondaries, electrostatic shielding inherently built-in, and reduced interwinding capacitance
- Laminated construction for low-cost industrial applications, including power supplies, controls and instrumentation
- Designed to meet UL requirements
- Provides isolation from power line and voltage step down or step up
- Transformer secondaries may be series or parallel connected for twice the voltage or twice the current rating for individual windings
- Dual primary for operation from 115V or 230V 50/60Hz line voltage
- Mounting brackets available on request at no additional cost. (See drawing.)

SPECIFICATIONS

OPERATING CHARACTERISTICS

Wattage: PL-42 = 1.5; PL-43 = 4.5; PL-44 = 10

Temperature: Class B 130°C max.
Operating: −55°C to +105°C
Storage: −55°C to +130°C

Excitation Current at 115V 60HZ; PL-42 = 25 MA max. PL-43, PL-44 = 35 MA max.

Temperature Rise: 25°C max. at rated operating voltages and loads.

Dielectric Strength: 2500V, 60 HZ between primary and secondary windings, and between all windings and core. 1000V, 60HZ between secondary windings 500V, 60HZ between primary windings.

MECHANICAL

Construction: Laminated, varnish impregnated

Weight: PL-42 = 100 grams; PL-43 = 160 grams; PL-44 = 240 grams

Terminals: Brass, solder coated

ORDERING INFORMATION

The following model number information must be supplied when ordering transformers.

PL-22, PL-23, PL-24	-01 thru -17	A B
POWER TRANSFORMER Miniature P.C. Mount	**DASH NUMBER** for Output Voltage and Current	**TYPE OF MOUNTING FRAME,** if required. (If none, leave blank.)

Special designs not listed available upon request.

For complete information, write or phone
DALE ELECTRONICS, INC., East Highway 50, Yankton, South Dakota 57078 • Phone 605-665-9301

DALE® CUSTOM INDUCTIVE PRODUCTS

Can't find it in the catalog? Dale has the custom capability to design and produce a wide range of magnetic components to your requirements.

POWER TRANSFORMERS:	50 to 400 Hz, VA ratings to 100 VA. Specialty models in Low Profile and PC Mount
INDUCTORS:	Inductance values to 20 H, current ratings to 60 amps. Capability of many styles, including: Toroidal, Laminated, E Core, Pot Core, Slug Core, Air Core
AUDIO TRANSFORMERS:	Coupling Transformers and Hybrid Transformers available in PC Mount, Leadset and Low Profile
SWITCH MODE MAGNETICS:	Switching Converters, Power Transformers, Current Sense Transformers, Inductors

• UL, CSA & VDE Capabilities • Designs to Military Specifications

TOUGH COIL JOBS

Whether you need a hundred pieces or a million, we offer:

- Complete facilities to design, engineer and produce prototype quantities.
- Faster turn-around on custom samples and short run production quantities.
- Close production coordination including cost-saving statistical control on high volume items.

ENGINEERING AND DEVELOPMENT

When engineering assistance is required, Dale is staffed and equipped to perform…

1. Production Engineering to translate your specifications into a product with **optimum quality** and **economy.**
2. Development Engineering to provide the electrical function you require.
3. Design Engineering to transform your basic idea into parts.

PRODUCTION

Ability to move quickly in converting your order to finished parts is a Dale trademark. Facilities are available for everything from high volume commercial parts to highly sophisticated military items requiring specialized production and test equipment. In dealing with Dale, you draw on a background of production experience which can provide a definite advantage in accelerating availability.

QUALITY CONTROL

Full time quality control personnel and the facilities of Dale's company-wide reliability and quality control organization enable fast action in establishing military test procedures and in meeting other government requirements—including MIL-Q-9858.

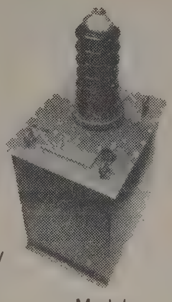
High Voltage Line Isolation Transformers In Oil Insulating Tanks



Model
3–TR–150–11

FEATURES:
- ▼ Complete varnish impregnation under vacuum
- ▼ Epoxy anchoring
- ▼ Immersed in high grade insulating oil*
- ▼ Electrostatic shield between primary and secondary windings
- ▼ "AN" type connector provided for input connections
- ▼ Good regulation

*Note: Shipped without oil to minimize transportation charges, except when otherwise specified in order.

SPECIFICATIONS:
- ▼ Each model available with porcelain output insulator
- ▼ Models also available with two shielded polyethylene output cables in place of porcelain insulator
- ▼ Standard types available for 120V and 240V input lines in 1:1, 1:2, and 2:1 voltage ratios with other input and output voltages available upon request
- ▼ Recommended for industrial, research, and developmental applications

Standard 60Hz Types

Model No.*	Max. kVA	kV dc Insulation	Tank Size (in.) (W X D X H)**	Insulator Height (in.)***
1-TR-30-XX	1	30	10 X 12 X 11	6
1.5-TR-30-XX	1.5	30	13 X 13⅞ X 16½	6
1-TR-50-XX	1	50	13 X 13⅞ X 16⅜	8½
3-TR-50-XX	3	50	13 X 13⅞ X 16⅜	8½
1-TR-60-XX	1	60	9¾ X 12⅜ X 13⅜	11
2-TR-60-XX	2	60	16½ X 16½ X 21⅜	11
3-TR-60-XX	3	60	16½ x 16½ X 21⅜	11
5-TR-60-XX	5	60	16½ X 16½ X 21⅜	11
3-TR-75-XX	3	75	16½ X 16½ X 22	11
1-TR-100-XX	1	100	20¾ X 17½ X 17 13/16	14
3-TR-100-XX	3	100	20¾ X 17½ X 17 13/16	14
3-TR-150-XX	3	150	15½ X 18¾ X 24	19½
5-TR-150-XX	5	150	15½ X 18¾ X 24	19½
0.5-TR-250-XX	0.5	250	25 X 33 X 37 5/16	28¾
2-TR-250-XX	2	250	25 X 33 X 37 5/16	28¾
3-TR-250-XX	3	250	29¾ X 29¾ X 36⅜	28¾
5-TR-250-XX	5	250	25 X 33 X 37¼	28¾
4-TR-300-XX	4	300	39½ X 47½ X 50½	35
Models With Shielded Cables Instead Of Porcelain Insulator:				
0.5-CTR-250-XX	0.5	250	25 X 33 X 37 5/16	
2-CTR-250-XX	2	250	25 X 33 X 37 5/16	
3-CTR-250-XX	3	250	29¾ X 29¾ X 36⅜	
4-CTR-300-XX	4	300	25 X 33 X 37¼	
5-CTR-250-XX	5	250	39½ X 47½ X 50½	

*Note: Add the following suffix in place of XX:

For	Suffix	For	Suffix
120/120	11	240/120	21
120/240	12	240/240	22

**Note: Dimensions are nominal and outline drawings are available upon request.
***Note: If shielded polyethylene output cables are desired in place of porcelain insulator, designate part number with a "C" prefix, e.g., 1-CTR-30-XX.

All primaries: 115 volts, 60Hz.

Transformer, High Voltage—Line Isolation Open Type Construction—Epoxy Coated

FEATURES:
- ▼ Designed for continuous operation at rated voltage and power
- ▼ Epoxy coated, air insulated up to 30kV dc, oil insulated over 30kV dc
- ▼ Well suited to applications requiring reliable isolated line voltage at power ratings up to 1kVA
- ▼ Other higher voltage and power units available upon request

SPECIFICATIONS:
Primaries: 115V or 230V, 60Hz
Secondaries: 115V

From A Single Source

Magnetic Components To Your Specs.

When you need transformers, solenoids, coils, torroids or similar magnetic components, ECC has the experience, personnel and facilities to design, build and deliver your parts . . . on time.

Whatever techniques your magnetic components require:
HIGH SPEED WINDING • HAND WINDING • ASSEMBLY
MOLDING • POTTING • VACUUM IMPREGNATION

We are ready to put our facility to work for you.
For a complete capabilities brochure, call us at:

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

Underwriters Labs, Inc.

ATTRACTIVE PRICE SAVINGS IN QUANTITIES OF 500 AND OVER!

Available only in three types of channel frames as shown and in three different VA ratings these units are priced lower than our standard PC/DPC series and will afford substantial savings in larger quantity ranges. Additional savings can be realized if single secondary can be used in lieu of dual secondaries as shown.

Electrical characteristics differ from our standard PC/DPC series.

Style "C" channel frames supplied hot tin dipped to assure proper solderability. Other styles supplied electro tin plated.

EWC® INC.

Miniature Plug-In Power Transformers

Recognized Component
Underwriters Labs, Inc.

For triple-output regulated supplies

IDEAL FOR MICROPROCESSOR APPLICATIONS

This line was designed around our standard PC and LP Series and is specified in terms of DC output.

Size "V" available with single primary only.

Sizes "X" and "Y" available with single or dual primary.

Sizes "6" and "12" available with dual primary only.

1000V hipot is standard on Sizes "V", "X" and "Y".

1500V hipot is standard on Sizes "6" and "12".

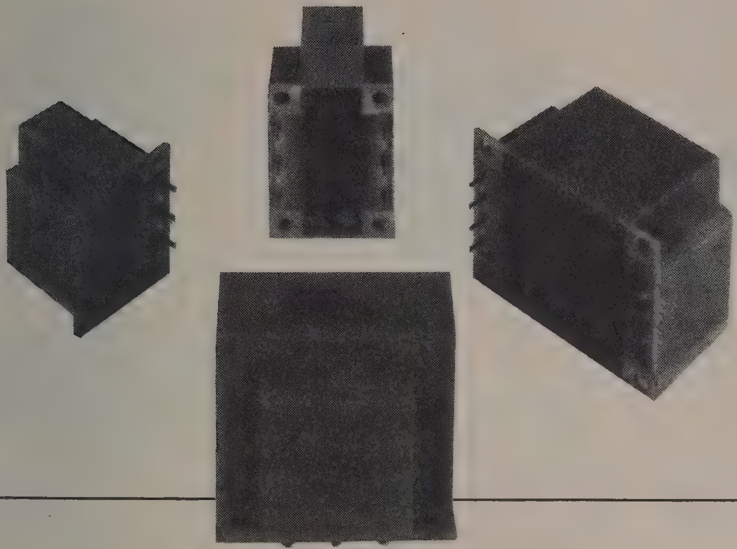
FORM-TRAN™

For military style packaging of printed circuit board plug-in transformers — at commercial prices



FEATURES

- Assures greater reliability.
- Encapsulated in form fitting shells to protect against possible damage due to use of water soluble and other fluxes as well as electrolytic corrosion experienced on open type construction
- Enhances physical appearance of your printed circuit board.
- In addition to UL recognition modified "Form-Tran" packaging can be provided that will meet safety requirements valid in all member countries of the European Community and Canada.

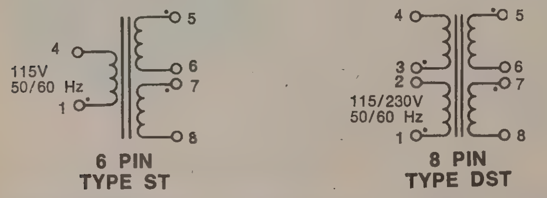
CLEARANCE HOLE FOR OPTIONAL MTG. SCREW AND NUT.
NOTE: PINS 2 & 3 OMITTED ON SINGLE PRIMARY VERSIONS



TRANSFORMERS WOUND ON A SPLIT BOBBIN PERMIT THE PRIMARIES AND SECONDARIES TO BE WOUND SIDE BY SIDE RATHER THAN ONE OVER THE OTHER.

FEATURES ARE:

2500V RMS Hipot
Elimination of electro-static shield
No cross-overs of primary and secondary leads
Class S insulation — 130°C

Transformers can be supplied with single 115V or 115/230V, 50/60 Hz dual primaries. Secondaries can be series or parallel connected.

Size	VA	L	W	H	ML	A	B	C	Lbs.
2	1.1	1 3/8	1 1/8	15/16	——	.250	.250	1.200	0.17
3	2.4	1 3/8	1 1/8	1 3/16	——	.250	.250	1.200	0.25
4	6	1 5/8	1 5/16	1 5/16	1 1/16	.250	.350	1.280	0.44
5	12	1 7/8	1 9/16	1 7/16	1 1/4	.300	.400	1.410	0.70
6	20	2 1/4	1 7/8	1 7/16	1 1/2	.300	.400	1.600	0.80
7	36	2 5/8	2 3/16	1 9/16	†	.400	.400	1.850	1.10

†Size 7 has 4 mtg. holes on 2 3/16 x 1 3/4 centers for a #6 screw. Need not be nylon.

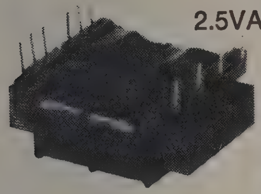
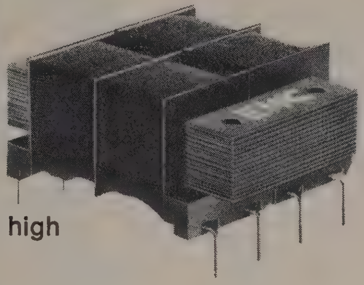
Underwriters Labs, Inc.

Miniature LO-PROFILE Plug-In Power Transformers

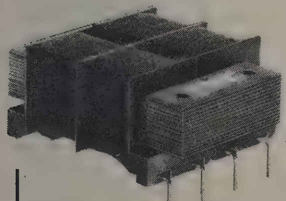
For printed circuit applications



2.5VA — 0.650 inches high



12VA — 1.065 inches high



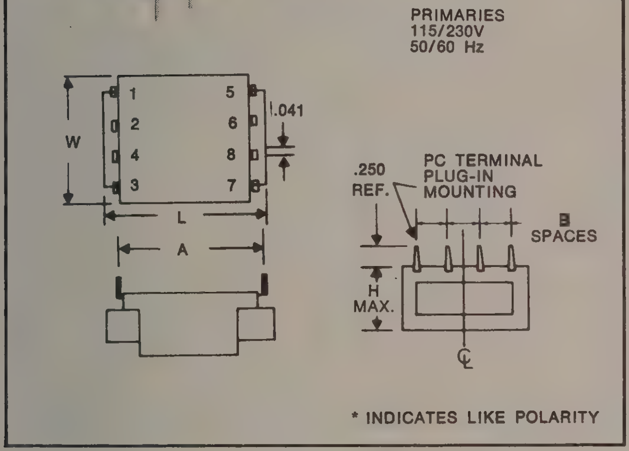
6VA — 0.850 inches high

THREE SIZES:

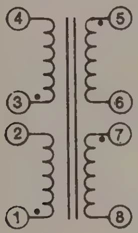
EWC's lo-profile, plug-in power transformers are designed for low height, critical pc board applications in semiconductor control and instrumentation. Interchangeable with those of other manufacturers, the units are for use in single, dual or reference dc supplies, or isolated control circuits.

EWC TRANSFORMERS FEATURE

- Non-concentric winding, achieved by secondary being wound alongside primary rather than directly over it, to lower inter-winding capacitance, thus eliminating the use of an electrostatic shield.
- Hum-bucking (semi-toroidal) construction to diminish radiated magnetic field and balance winding.
- Lo-profile design permitting close card spacing: ¾" for 2.5VA units, 1" for 6VA units and 1¼" for 12VA units.
- Dual Primaries: 115/230V, 50/60 Hz
- 1500V RMS HIPOT



* INDICATES LIKE POLARITY



Size	L	W	H	A	B	Oz.
2	1⅞	1 9/16	0.650	1.600	0.375	5
6	1⅞	1 9/16	0.850	1.600	0.375	7
12	2½	2	1.065	2.000	0.500	11

*Regulation of Size 2 and 6 units is 30%, i.e., no load-secondary voltage is 30% higher than full load. Regulation of Size 12 units is 20%.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

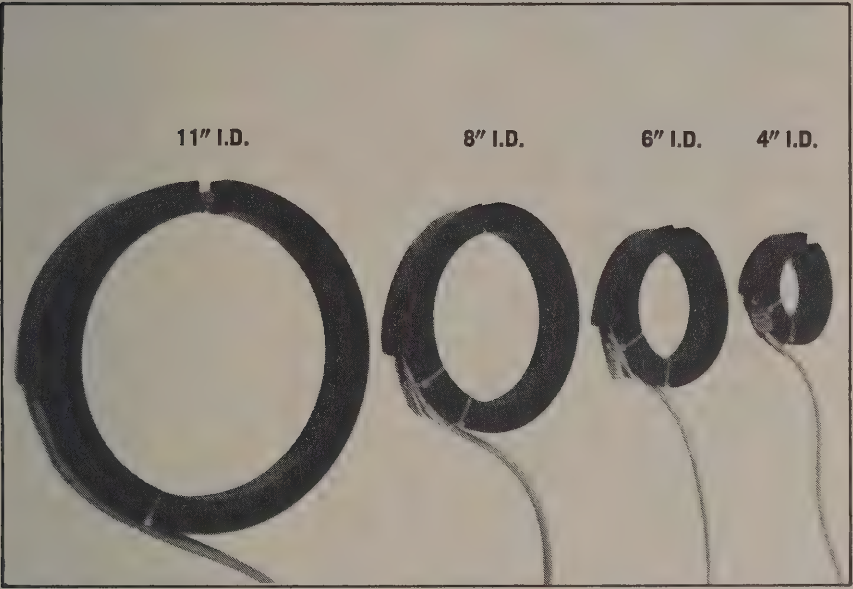
SPLIT-CORE CURRENT TRANSFORMERS



NOTE: Open split-core with a twisting motion only.

- OTHER RATIOS AVAILABLE
- FOUR OPENING SIZES
- 1, 3, OR 5 AMP SECONDARIES
- DUAL TAP RATIOS AVAILABLE
- ALL RATIOS STOCKED
- LOOP COIL MULTIPLIER AVAILABLE

DESCRIPTION: This split-core current transformer was designed for easy installation on large bus or wire conductors in order to make electrical load surveys or for continuous monitoring of current.

APPLICATION: To be used with any 5 amp indicating or recording ammeter or amp or watt transducer. Also useable with indicating or recording clamp-on ammeter.

CONSTRUCTION: Directional silicon steel is used for the flexible core. Secondary windings are of copper. Unit is encapsulated in silicon rubber which protects against moisture, dirt, oil and corona. Remains flexible from −45° to +200°C.

INSULATION LEVEL: 600VAC — can be used over insulated conductors on higher voltage circuits.

SAFETY FACTOR: Secondary voltage limited to less than 50VAC when secondary leads are open circuited.

SECONDARY LEADS: 12 feet long with spade connectors.

COLOR: Transformer (red) — leads (yellow).

FREED TRANSFORMER CO., INC.

HERMETICALLY SEALED MINIATURE AND SUB-MINIATURE FILTERS TO MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency • **ILP-ILM Interstage Low Pass Filter.** Characteristic impedance 10,000 ohms, in and out • **LLP-LLM Line Low Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **High Pass Filters:** The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency • **IHP-IHM Interstage High Pass Filter.** Characteristic Impedance 10,000 ohms, in and out. • **LHP-LHM Line High Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **Band Pass Filters:** The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency • **IBP-IBM Interstage Band Pass Filter.** Normal input impedance — 10,000 ohms. Output impedance .5 megohms. Effective voltage step-up 2:1. (Output voltage to source voltage.) • **LBP-LBM Line Band Pass Filter.** Nominal input impedance 500 to 600 ohms. Output impedance .5 megohms. Effective voltage step-up 5:1. (Output voltage to source voltage.)

Special filters in all six types are available upon request.

NULL "T" FILTERS
SERIES 1950

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

Catalog No.	Frequency
NTF- 30	30 Hz
NTF- 60	60 Hz
NTF-120	120 Hz

FREED TRANSFORMER COMPANY. INC. 1795 WEIRFIELD ST., RIDGEWOOD, N.Y. 11385

FREED TRANSFORMER CO., INC.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
SM Temperature stabilized cores, ±.25% —65°C to +125°C.
SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

*TI-20 through TI-23 have a very low voltage coefficient and inductance will change very little with voltage. Because of high frequency application, the maximum voltage is limited rather by breakdown than by saturation.

$$\text{Normalized } V_{AC} = \frac{V}{F}\,\frac{1}{\sqrt{L_H}}$$

$$\text{Normalized } I_{AC} = I_{AC}\sqrt{L_H}$$

$$\text{Normalized } I_{DC} = I_{DC}\sqrt{L_H}$$

where F —operating frequency in Hz
L_H —inductance in henries
Iac—A.C. current in MA
Idc—D.C. current in MA
V —A.C. voltage across the core

FREED TRANSFORMER CO., INC.

COMMERCIAL GRADE COMPONENTS

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment.

The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics. Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance.

230-115 V, 50-60 C.P.S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series.

All units, with only a few exceptions, are uncased or of shell-type construction.

Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

MCV – CONSTANT VOLTAGE TRANSFORMERS – MCV

(FERRO-RESONANT TRANSFORMERS)

The MCV line of constant voltage transformers provides accurate regulation against line and/or load variations, without the use of tubes or moving parts.

Input Voltage Range 95 to 130

Rated output within ± 2% of nominal value. Regulation automatically maintained within ± 1%. Regulation from 25% to full load ± 2%.

- MILITARY SPECIFICATIONS
- NO TUBES
- COMMERCIAL
- NO MOVING PARTS
- ACCURATE REGULATIONS
- FAST RESPONSE
- FULLY AUTOMATIC
- SUPPLIED WITH CONDENSERS

The Hammond Alternative For Electronic Transformers

Series 107, 108, 109 PC mounted audio transformers

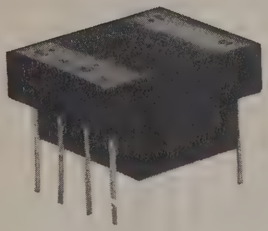
Features

- These P.C. mounted audio transformers are designed to meet rugged commercial requirements at low cost.
- Transformers are moisture resistant and will also resist most industrial solvents.
- Pins are brass with solder plate and will withstand soldering for 10 seconds at 260° C.

Series 1536 and 1537 RF Chokes

Features

- This series of R.F. filter chokes is ideally suited for power supply filtering applications.
- The coils are designed to offer a relatively high inductance and high current.
- Customers can expect high quality from this Hammond Manufacturing line of R.F. chokes.



Series 600-602; 630, 631, 632, 640, 641 Pulse and Trigger Transformers

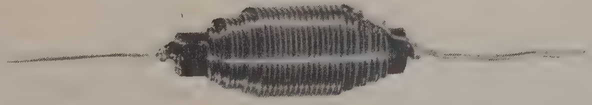
Features

600-602

- Suitable for computer and data process applications.
- Moulded epoxy case, p.c. mountable.

630-632

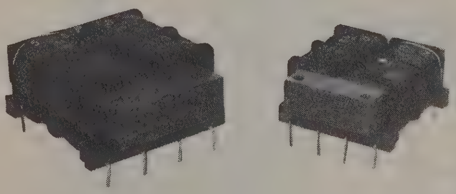
- Specially designed to trigger Thyristors and Triacs.
- Encapsulated in plastic case, p.c. mountable.
- Recommended operating class 600V.



640-641

- Designed for S.C.R. and Triac triggering.
- Moulded into case with epoxy resin, p.c. mountable.
- Recommended operating class 600V.

- Primaries 115/230 volts, 50/60 Hz.
- Due to physical separation of primary and secondary windings the need for electro-static shield has been eliminated and allows a 1750V RMS Hipot test on all models.
- Two-coil design provides balanced windings and low magnetic radiation.
- Ideally suited for power applications in solid state control and instrumentation, and isolated D.C. supplies requiring single or dual outputs.



And Many More . . . .
Hammond Manufacturing's 5C catalog contains a wide range of electronic transformers including: broadcast, power, pulse, trigger, transistor, reactor, rectifier and many many more stock transformers. Send for catalog 5C today.

VARIABLE TRANSFORMER

THE PROBLEM:

Conventional variable transformers have been built for years by dozens of companies all over the world, all along the same lines. A core of transformer steel (typically toroidal) is wound with a layer of copper wire which has a bare surface track ground down to provide a contact area for a traversing carbon brush. The inherent design flaw is that to provide continuous contact while traversing, the brush shorts two turns of the coil. This creates a turn-to-turn short circuit in the transformer which, if not for the relatively high impedance winding, the resistance of the wire, and the voltage drop in the carbon brush, would cause overheating and ultimate failure in the coil and brush. This weakness precludes the manufacture of a large KVA unit. More KVA requires lower impedance, heavier wire (less resistance in the shorted turn loop) and larger mass of brush (less voltage drop). Each of these changes increases the shorted-turn circulating current to the point that elaborate cooling systems are required to prevent the device from self destructing. Therefore, manufacturers of conventional adjustable transformers have been limited to the relatively small sizes of 7.5KVA or 21KVA three phase, or the system must be oil cooled to remove the destructive heat. At power levels above 7.5 and 21KVA multiple units must be stacked, with all the resulting size, cost and manpower penalties.

THE SOLUTION:

The PESCHEL VARIABLE TRANSFORMER (PVT) has the same basic transformer steel core surrounded by a copper wire winding. However, the winding is done so that all odd turns compose one track and all even turns the other. Each nickel plated track is traversed by its own copper (not carbon) brush a few thousandths of an inch narrower than winding wire dimension. The two brushes are connected together through one or more sets of back-to-back diodes with a standard .6 volt forward voltage drop. Thus as long as the turn-to-turn voltage is less than 1.2 volts, no current can circulate. The .6 volt drop is insignificant (See Schematic #1).

The diodes are extremely inexpensive because there is no PIV requirement, the copper brushes are not only less expensive than carbon brushes, but provide much better conductivity, consequently, electrical losses which occur in carbon brushes are avoided.

The PVT also incorporates ampere balancing coils under the tapped winding. These balancing coils eliminate higher centerpoint or non-linear impedance characteristics found in single layer variable transformers.

Heat from diode drop/load current is minimal compared to the rating of the unit and is not dissipated on the core, but on the track hardware. Less heat generation allows considerably lengthened overload time ratings. Furthermore, the brush mechanism of the PVT has significantly less mass than the brush mechanism of conventional ganged units, allowing smaller drive motors and/or much faster traverse speeds.

If line isolation or step-up or step-down voltages are required a primary is inserted under the tapped winding. This eliminates the need for an extra transformer and simultaneously reduces wasted power.

DC OUTPUT: If the same blocking diodes (with appropriate higher PIV) on the AC machine are connected in a bridge circuit, output is a continuously adjustable DC voltage. (See Schematic #2).

Analysis of the schematic shows turn-to-turn current is precluded from circulating by the drop of the two diodes and the load resistance. Two extra diodes are required in a single phase bridge, six in three phase, but the cost of the diodes are insignificant when compared to SCR's and associated firing circuits. The advantages of the PVT over an SCR controller are many. The cost per horsepower within a certain range (like 5 to 100HP) should be less. Maintenance is greatly simplified. Since the PVT is an electro-mechanical device, plant maintenance people can see the problem whereas modern electronic controllers are "Black Boxes" beyond the technical capabilities of most plant electricians. Electro-magnetic interference caused by high frequencies generated by SCR turn-on is eliminated and output voltages, other than rectified line voltage, are easily obtained without an additional transformer.

CONCLUSION:

The invention of the PVT eliminates the one inherent flaw in existing variable transformer design and permits manufacture of **any size** for **any voltage.**

PESCHEL VARIABLE TRANSFORMER

Hipotronics

USES:

- DC Motor Speed Controller
- Chemical Processes
- Electro-Magnets
- Electropainting

ADVANTAGES:

- No Electronics
- No Waveshape Chopping
- No Effect on Power Factor
- No EMI
- Same Ripple, Any Voltage

Hipotronics

TRANSFORMERS "RM" SERIES

Hipotronics RM Series of high quality transformers are basically designed for air or oil envirnoment. Models RM 17-3, RM 21-3 & RM 25-3 are manufactured for oil environment only.

Models RM 6-1, RM 7-1, RM 8-1, RM 9-1 and RM 10-1 are available manufactured in an epoxy incloser on special request.

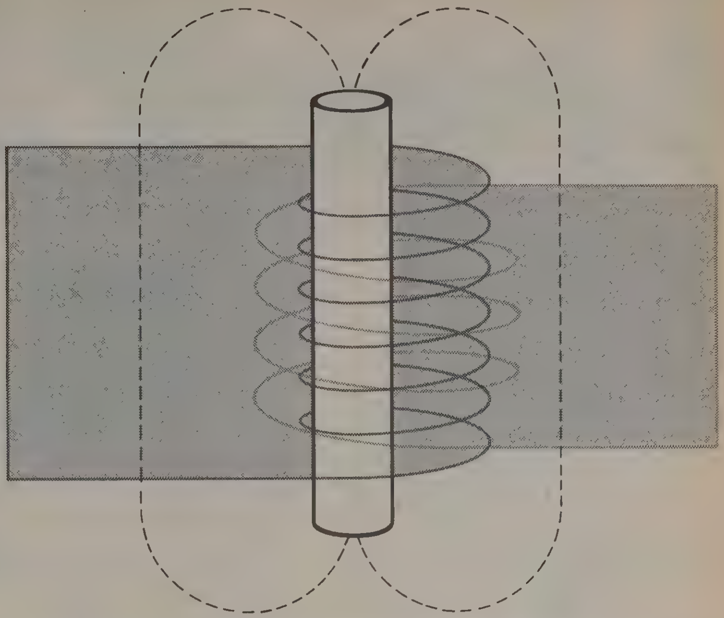
Hisonic... specialists in custom and standard inductor and transformer components



The control of electric current is only as good as the components that carry it.

INDUCTORS: Our manufacturing capabilities are the result of experience dating back to 1950 and now include virtually every known construction your special applications may require . . . and at reasonable prices.

TRANSFORMERS: Hisonic's special power/converter and signal/matching transformers for both audio and wide video ranges are used in airborne comm/nav and ground communications systems. Included are toroidal, pot core, and laminated core types manufactured to commercial and MIL specifications. Our 30 year experience is at your disposal to help solve your transformer and inductor problems.

HITRAN

Division of AGEX

Key source for reliable magnetic components, power supplies and control systems for over 40 years.

300 VA TO 3000 KVA STANDARD & SPECIALTY MAGNETIC COMPONENTS

STANDARD TRANSFORMERS

DIT SERIES — Drive Isolation Transformers. (12-550KVA, U.L. Listed)

Designed to provide electrical isolation and voltage transformation for SCR adjustable-speed motor drives. Dry type. 600V class. Single phase and three phase. 50HZ and 60Hz. 5% FCAN and FCBN primary taps. Open frame or NEMA 1 enclosed, 150°C rise/220°C insulation class standard, 115°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

- 1, 1½, 3, 5, 8, 12, 15, 20, 27, 30, 34

Three Phase

- 8, 12, 15, 20, 27, 34, 40, 51, 63, 75, 93, 120, 150, 180, 220, 280, 330, 440, 550, 660, 760, 870, 980, 1100.

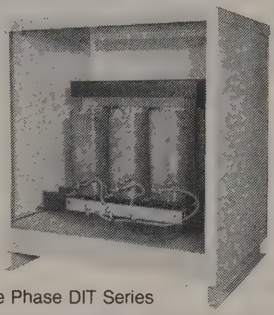
Standard Voltages Available

Single Phase

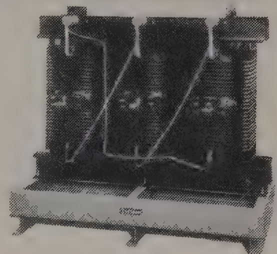
- Primary or Secondary 208, 230, 380, 460, 575, 230/460, 415

Three Phase

- Primary (△) 208, 230, 380, 460, 575, 230/460, 415
- Secondary 208Y/120, 230Y/133, 380Y/220, 460Y/266, 575Y/332, 230x460Y/133x266, 415Y/240



Three Phase DIT Series



1500KVA HVDT 15KV Class Transformer

GPT SERIES — General Purpose Transformers

Designed to provide electrical isolation and voltage transformation for lighting, electric heating and industrial motor loads. Dry type, 600V class, single phase and three phase, 50Hz and 60Hz. FCAN and FCBN primary tap arrangements are standard. 150°C rise/220°C insulation class standard, 115°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

- 3, 5, 7½, 10, 15, 25, 37½, 50, 75, 100, 167

Three Phase

- 3, 6, 9, 15, 30, 45, 60, 75, 112½, 150, 225, 300, 400, 500, 750, 1000

Standard Voltages Available

Single Phase

- Primary (3KVA-15KVA) 240/480, 208, 277, 480, 600
(25KVA-167KVA) 240x480, 480, 600
- Secondary (All KVA sizes) 120/240

Three Phase

- Primary (△) 240, 480, 600
- Secondary 208Y/120, 240△, 480Y/277

HVDT SERIES—High Voltage Distribution Transformers

Designed for in-plant distribution and voltage step-down. Conventional dry type or resin cast coil. 5KV through 15KV class. Single phase and three phase. 50Hz and 60Hz. FCAN and FCBN primary tap arrangements are standard. 150°C rise/220°C insulation class standard, 115°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

- 3, 5, 10, 15, 25, 37½, 50, 75, 100, 167, 200, 250, 333, 500

Three Phase

- 15, 30, 45, 75, 112½, 150, 225, 300, 400, 500, 750, 1000

Standard Voltages Available

Single Phase

SPECIALTY MAGNETIC COMPONENTS

Also see our catalog pages under AC POWER SOURCES and DC POWER SOURCES.

Transformers

- Convection, forced air or water cooled.
- Dry type, liquid filled, cast-resin.
- Low voltage, high voltage to 300KV.
- High current to 20,000 Amperes.
- High frequency to 10KHz.
- Low temperature rise, high efficiency.
- Ferroresonant transformers - conventional constant voltage and harmonic-neutralized.
- Ultra isolation transformers to 0.001 picofarads.
- Low capacitance transformers, electrostatic shielded.
- High reactance transformers - short circuit current limited.
- Modulation (Output) transformers to 50KW.
- Rectifier and filament transformers.

Inductors

LC Series - Link Chokes (DC)

Designed for use as a smoothing inductor in the DC link between rectifier and inverter in variable-speed AC motor drives from 15 to 1000 HP. Dry type, 600V class.

LR Series - Line Reactors (AC)

Designed for use as a line reactor in the three phase input lines supplying variable-speed AC motor drives from 15 to 1000 HP. Dry type, 600V class; three phase; 50Hz and 60Hz.

Other specialty inductors include:

- AC, DC.
- Iron-core, air-core.
- Linear, swinging.
- AC current limiting reactors.
- AC power factor correction reactors.
- DC filter chokes.
- AM modulation reactors.

Saturable Reactors:

Low voltage, High voltage to 15 KV. Sizes to 1000 KVA.

Split Bobbin Transformers

The use of a Split Bobbin allows winding to be nonconcentric (side-by-side), consequently high isolation is achieved at low cost.

- Better insulation — 2500 VRMS hipot is standard.
- Lower capacitance — no need for electro-static shield.

Also available:

- **Units with 4000 VRMS hipot**
- Steel covers
- Flexible leads
- Multiple outputs
- Tapped primaries
- Quick disconnect terminals
- Consult factory for any other configurations you may require

Split Bobbin PC Board Transformers

The use of a Split Bobbin allows winding to be nonconcentric (side-by-side), consequently high isolation is achieved at low cost.

- Better insulation — 2500 VRMS hipot is standard.
- Lower capacitance — no need for electro-static shield.

Please note that the standard items listed below utilize 6 or 8 pins, while 12 pins are available. We would like to quote your more complex requirements . . . you may save cost and space by combining two less complex Transformers into one.

We would also be glad to quote your less complex requirements. For example, if only a Single Primary and Single Secondary are needed, you can save considerable cost by utilizing only 4 Pins.

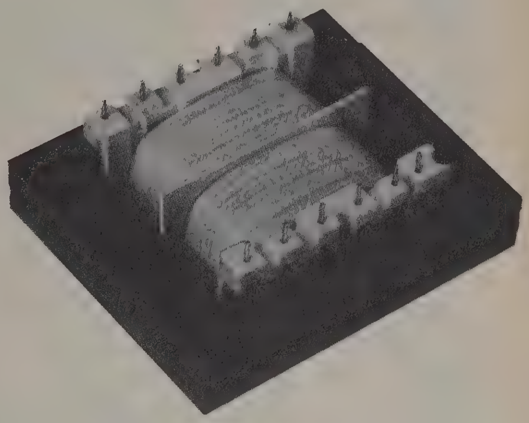
Low Profile Split Bobbin PC Board Transformers

- **Only 1.13″ high**

XL Series transformers offer a particularly low profile for 18VA, allowing for 1.25″ card spacing.



The use of a split bobbin allows winding to be non-concentric (side-by-side), consequently high isolation is achieved at low cost.

- Better Insulation — 2500 VRMS hipot is standard.
- Lower Capacitance — no need for electro-static shield.

If the standard items shown here do not fit your requirements, we would be glad to quote on your custom needs. Often this can save space and considerable cost.

send specifications for your special requirements

LENCO, dedicated to transformer design, product improvement, cost reduction and fast delivery to meet your specifications and most critical production schedule. An endless variety of types, sizes and performance capabilities for a wide variety of industries.

Experienced personnel with specially developed electronic skills for an exacting technology to meet the most critical requirements. Manufactured to conform to UL, CSA, VDE, FCC-Part 68, etc.

Our specialty is your special application and we invite you to send or call for your custom requirements. For no obligation quotes, engineering, design consultation and manufacture, contact Lenco, the performance people.

AUDIO Impedance matching — Isolation —Broad frequency response — Low insertion loss — FCC Part 68.

CONSTANT VOLTAGE Regulating transformers built to your specifications for DC power supplies or low distortion AC.

CONTROL Custom designed to UL, VDE, CSA, etc. specifications.

CONVERTER High Conversion efficiency from DC input to filtered DC out. Toroidal, Laminated, Ferrite, (Switch-Mode) etc.

CURRENT Toroidal, Laminated, Core, Impregnated, or Encapsulated.

FILAMENT Dry type, Laminated core.

HIGH TEMPERATURE Vacuum impregnation with temperature material to 200°C. Epoxy encapsulated.

INDUCTORS Filter, A.C. Noise filtering, Switch-mode.

INPUT AND OUTPUT Designed to your specifications.

ISOLATION Audio, Step-down, Step-up, Foil electrostatic shielded, Electromagnetic shielded.

LOW PROFILE PC mount, Split bobbin, Vacuum varnish or epoxy impregnated.

MEDICAL UL 544 Patient connected, or non-patient connected. Power.

POT CORES PC mount, Frame mount, Encapsulated or Impregnated.

SWITCH-MODE POWER Dry type, Air cooled, Laminated or Ferrite.

THREE PHASE 50-60-400 Hertz up to 1 KVA.

QUALITY TRANSFORMERS AT COMPETITIVE PRICES

Founded a quarter-century ago, MCI Transformer Corporation is an established leader in the manufacture of horizontal, vertical and low profile transformers for printed circuit boards. Recently, the line has been expanded to include quick-connect and encapsulated models.

At MCI, the very latest production automation techniques are employed to ensure the highest possible quality at low competitive prices.

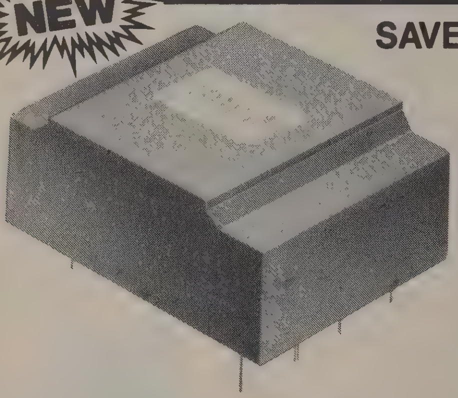
- Made in U.S.A.
- UL-Recognized
- In stock for fast delivery
- Custom designs available
- Shipped in protective vacuum-formed trays

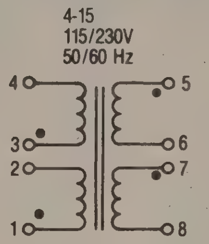
LOW PROFILE PC ENCAPSULATED TRANSFORMERS

SERIES 4-15

NEW

SAVE UP TO 40% IN VOLUME





Our encapsulated design offers high reliability because of its mechanical strength, electrical insulation and moisture resistance. The internal construction consists of 2 split bobbins which isolates the primary and secondary thereby eliminating any need for an electrostatic shield. The construction will pass requirements of U.L., C.S.A. and V.D.E.

HOW TO ORDER A LOW PROFILE PC ENCAPSULATED TRANSFORMER

MCI uses a Seven Digit Part Number

First Digit	4	MCI Product Identification
Second & Third Digits	15	Dual 115/230V Primary
Fourth Digit	2	Transformer size *(See current rating chart)*
Last three Digits	010 to 230	Secondary voltage *(See current rating chart)*

Example: 4-15-2010 is a dual 115/230V primary, 6VA transformer with two 5 volt secondary windings to be used as either 10V CT or 5V.

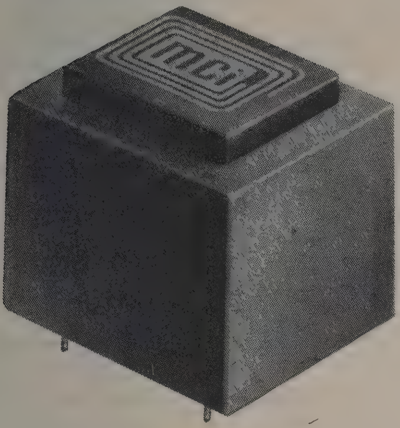
MCI TRANSFORMER CORPORATION 411 MANHATTAN AVENUE, BABYLON, NY 11704 • 516-587-0510

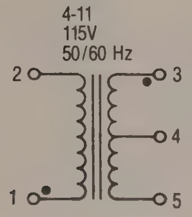
HORIZONTAL PC ENCAPSULATED TRANSFORMERS

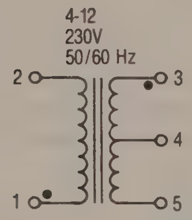
SERIES 4-11 & 4-12

NEW

SAVE UP TO 40% IN VOLUME







Our encapsulated design offers high reliability because of its mechanical strength, electrical insulation and moisture resistance. The internal construction consits of a split bobbin which isolates the primary and secondary thereby eliminating any need for an electrostatic shield. The construction will pass requirements of U.L., C.S.A. and V.D.E.

POWER TRANSFORMERS
PRINTED CIRCUIT

MICROTRAN company, Inc.

Flat Stack® low profile power transformers

115/230V 50/60 Hz

For Low Height PC Board Solid-State Power, Control, and Instrumentation Applications

- TWO SIZES
  6 VA Types 0.85″ high for 1″ Card Spacing
  12 VA Types 1.065″ high for 1¼″ Card Spacing
- SPLIT BOBBIN — Primaries and Secondaries Wound Side by Side.
  1500V Hipot.
  High Isolation for Low Leakage Applications.
  Low Capacity Coupling Minimizes Line Noise and False Triggering.
- HUM-BUCKING SEMI-TOROIDAL CONSTRUCTION
  Balanced Windings Reduce Magnetic Field Radiation.
- PRECISION SPACE MOLDED-IN TERMINALS
- DUAL PRIMARIES: 115/230V, 50/60 Hz.

POWER TRANSFORMERS
PRINTED CIRCUIT

MICROTRAN company, inc.

printed circuit power supply transformers

For Microprocessor Logic and Op Amp Power Supplies

PLUG-IN PC POWER TRANSFORMERS FOR +5V AND ±15V DC POWER SUPPLIES

For construction of low cost, miniaturized, regulated and unregulated DC power supplies for latest solid-state digital and linear circuitry. Permits packaging flexibility unobtainable with prepackaged power supplies. Low-profile, miniaturized construction permits close stacking of PC boards. Precision spaced molded-in terminals.

TRANSFORMERS FOR +5V DC SINGLE OUTPUT UNREGULATED AND REGULATED POWER SUPPLIES

* All primaries 115V 50/60 Hz except PCL6605 and PCL6610 which have 115/230V 50/60 Hz primaries.

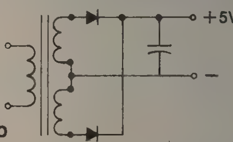
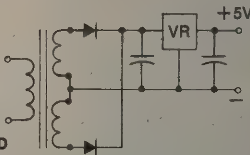
TYPICAL SCHEMATICS



UNREGULATED



REGULATED

ALL TRANSFORMERS ARE SUPPLIED WITH ENGINEERING BULLETIN LISTING SUGGESTED COMPONENTS

Bulletin provides typical schematics and suggested components for low-cost, miniaturized, unregulated and regulated power supplies. Regulated units have short circuit, thermal overload and overvoltage protection, and have the following typical specifications: Input 105-125V; Output ±0.1V; Load and Line Regulation 0.1% each; Ripple 1 mV RMS.

MINIATURIZED AUDIO TRANSFORMERS

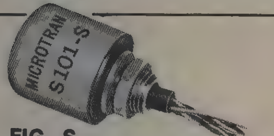

FIG. -S
SINGLE THREADED STUD MOUNTING
Double Mu-metal shielding. 3" color coded leads. 5/16"D. stud provided with nut. 5/8"D x 13/16" H. Wt. 0.55 oz.

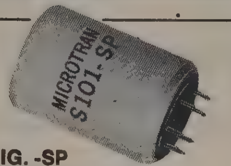

FIG. -SP
PRINTED CIRCUIT MOUNTED
Double Mu-metal shielded. 3/4" D x 1 1/16"H. 7-.040 pins 1/8" H. Wt. 0.62 oz.

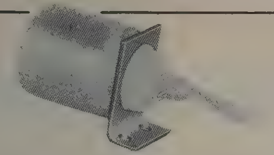

FIG. -FB
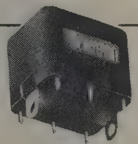
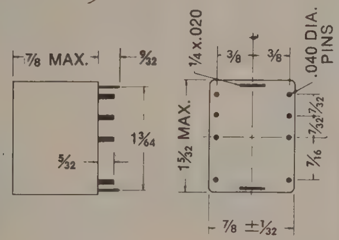
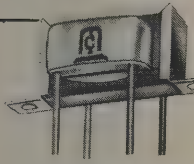
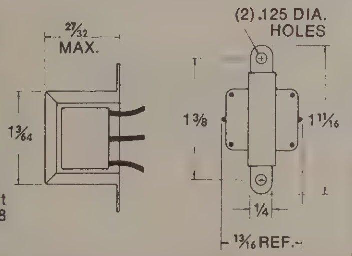
RIGHT ANGLE MOUNTING BRACKET
For mounting of -S series transformers. M.C. 3/8".



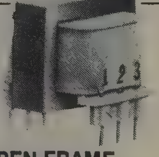


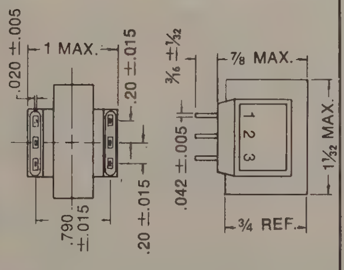
MOLDED M-M
To order add -M to Part No. For plug-in printed circuit applications. Epoxy resin provides resistance to extremes of ambient. Wt. 1.75 oz.



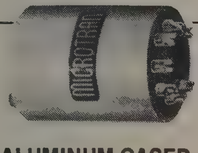


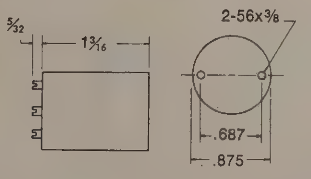
OPEN FRAME WITH CHANNEL M-FB
To order add -FB to Part No. Leads 4" long. #28 PVC Wt. 1.13 oz.





OPEN FRAME PRINTED CIRCUIT M-PC
To order add -PC to Part No. Units with more than 6 pins have 7 or 8 — .025 x .015 pins on .150 centers. Wt. 1.2 oz.





ALUMINUM CASED M-A
To order add -A to Part No. Supplied with 2-56 screws. Wt. 1.25 oz.

MICROPHONE/TRANSDUCER INPUT

FOR: PROFESSIONAL SOUND STUDIOS — BROADCAST MIXING CONSOLES — CONTROL AND INSTRUMENT AMPLIFIERS

EQUIVALENT TO IMPORTED EUROPEAN STUDIO GRADE TRANSFORMERS

- WIDE BANDWIDTH — BROAD FREQUENCY RESPONSE
- EXTREMELY LOW DISTORTION
- NEGLIGIBLE HUM PICK UP
- SUBMINIATURE SIZE
- EASE OF MOUNTING AND ORIENTATION
- POLARIZING VOLTAGE CONNECTION FOR CONDENSER MICROPHONES
- LOW MICROPHONICS
- ELECTROSTATIC SHIELDING

TELEPHONE INTERCONNECT TRANSFORMERS

MICROTRAN company, Inc.

line coupling-hybrid-holding coils

FOR INTERCONNECT OF VOICE/DATA MODEM TERMINALS TO TELEPHONE LINES

DESIGNED TO MEET FCC PART 68

Provides line isolation and matching — Prevents line imbalance — Wide dynamic signal capability — Low distortion
Permits Optimum use of Voice-Grade Telephone Lines for Broadband Data Signals

- Frequency Response: 300-3500 Hz ±0.5 dB
- Level: −45 dBm to +7 dBm
- Longitudinal Balance: Per FCC 68.310
- Distortion: 0.5% Max.
- Impedance Matching: ±10% over entire frequency range
- Return Loss: 26 dB Min.

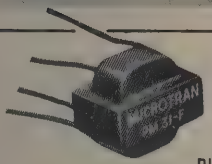
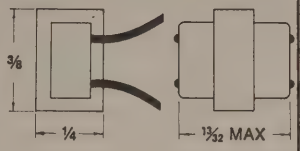
MINIATURIZED AUDIO TRANSFORMERS

PICO — ULTRA
VERI-MINIATURE

OPEN FRAME PM-F

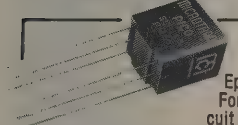


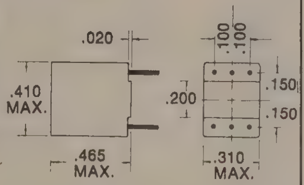


4 inch #30 Plastic color coded leads. Thorough resin impregnation and baking assures reliable life. To order add -F to Part No., i.e. PM33-F. Wt. .05 oz.

MIL Designation: TF6R21ZZ

MOLDED PM-M

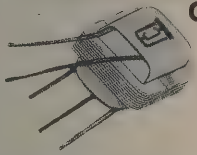


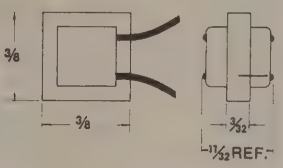


Epoxy molded. For printed circuit application. Gold plated high strength nickel alloy leads .020 x 3/4″ for reliable soldered joints and high-density welded lead packaging. Wt. .1 oz. To order add -M to Part No., i.e. PM12-M.

MIL Designation: TF5R21ZZ

OPEN FRAME UM-F

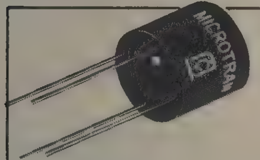


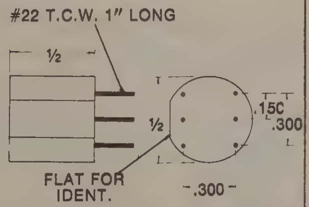


To order add -F to Part No., i.e. UM22-F. Wt. 0.08 oz. 4″ color coded leads.

MIL Designation: TF6R21ZZ

MOLDED UM-M

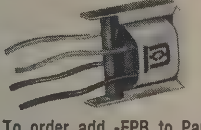


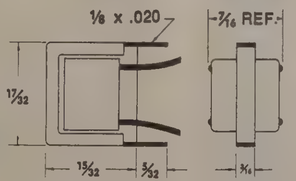


To order add -M to Part No., i.e. UM22-M. Wt. 0.14 oz.

MIL Designation: TF5R21ZZ

PLUG-IN TAB MOUNTED CHANNEL VM-FPB

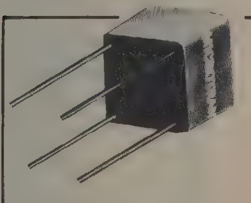


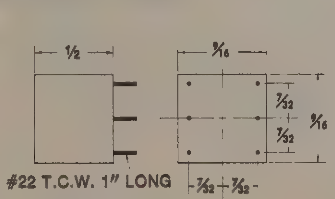


To order add -FPB to Part No., i.e. VM2-FPB. Wt. 0.2 oz. 4″ color coded leads.

MIL Designation: TF6R21ZZ

MOLDED VM-M





Epoxy molded. Wt. 0.25 oz. To order add -M to Part No., i.e. VM2-M.

MIL Designation: TF5R21ZZ

PICO-MINIATURE — PM SERIES

Frequency Response ±2 dB 300 Hz to 100 kHz†

For maximum utilization of space in miniaturized printed circuit board applications. Manufactured per MIL-T-27.

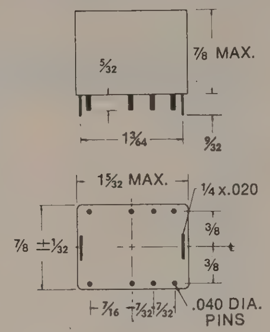
MINIATURIZED AUDIO TRANSFORMERS

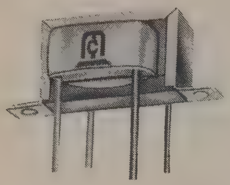
MICROTRAN company, inc.

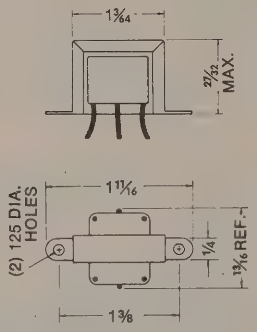
MICROTRAN
MMT18 M
1 2 3



MOLDED MM-M

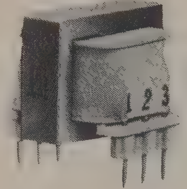
To order add -M to Part No. For plug-in printed circuit applications. Epoxy resin provides resistance to extremes of ambient. Wt. .5 oz.

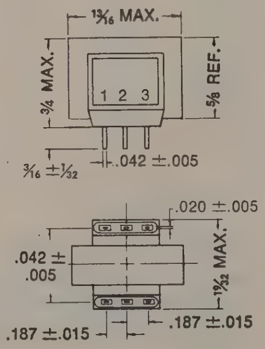




OPEN FRAME WITH CHANNEL MM-FB

To order add -FB to Part No. Leads #28 PVC 4" long. Wt. .36 oz.





PRINTED CIRCUIT — DCM SERIES

New Industrial/Commercial grade miniature printed circuit transformers. Rigid terminals provide fixed mounting centers usually found in expensive molded transformers. Wt. .5 oz.

MICRO-MINIATURE TRANSFORMERS MM & MMT SERIES

Primary and secondary windings may be interchanged to obtain required impedance matching. These units can be used as input, interstage, output, isolation and other impedance matching requirements. Also available in hermetic construction.
The low profile design of this series makes them ideal for use on plug-in printed circuit boards.

MPI is one of the most reliable suppliers, on a large scale, of transformer and magnetic components to the computer, data processing, communications & medical and recreational electronics OEMS. All units meet MPI's stringent QC standards and are UL CSA & VDE listed as required.

The product categories below provide general specification information for our basic product lines. However, our ability to design and manufacture custom components, to your specs, makes us the industry's true "super source".

INDUCTORS

PEAKING COIL AL TYPE

Style	Axial lead
Temperature rise	20°C
Ambient temperature	80°C
Temperature range	−20°C to +100°C
Terminal tensile strength	2.5kg.
Inductance range	0.22μH – 1000μH

PEAKING COIL EL TYPE

Style	Radial lead
Temperature rise	20°C
Ambient temp	80°C
Temperature range	−20°C to +100°C
Terminal tensile strength	1.5Kg.
Inductance range	0.22μH – 1000μH

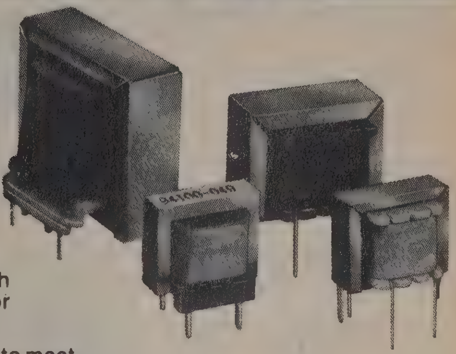
AUDIO/MATCHING TRANSFORMERS



MPI's miniature audio transformers are highly reliable and extraordinarily economical. All can be supplied vacuum epoxy impregnated with either standard leads or plug-in printed circuit construction. There are several standard bobbins with various pin spacings permitting optimum use of voice-grade telephone lines for broadband data signals.

Our newest line of extremely small telephone coupling transformers were designed to meet FCC Part 68 specifications for use with telephone equipment, modems and a variety of communications products.

They feature a frequency response of 300-3500 Hz ± 0.5dB; wide dynamic signal level of -45dBm to +7dBm; low distortion (0.5% max.); impedance matching of ± 10% over entire range; return loss of 16 dB min.

Depending on your requirements, any of several standard cores can be used in the construction of specific high quality designs.

Custom designs for your special requirements necessitating other ratings and construction can be met by our MPI design engineers.

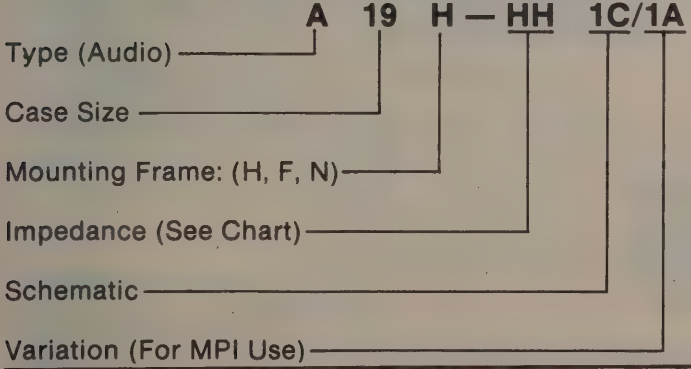
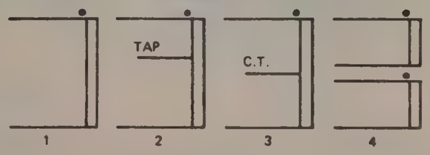
HOW TO SPECIFY TRANSFORMERS

When ordering or inquiring about MPI Audio or Power Transformers, simply follow the diagram below to identify the exact item you are specifying.

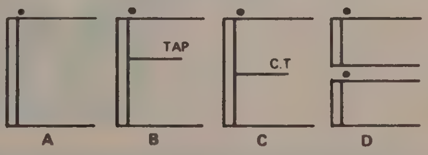
AUDIO TRANSFORMERS



PRIMARY

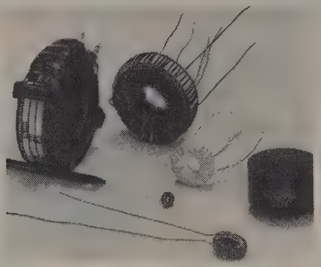


SECONDARY



TRANSFORMERS

Toroidal

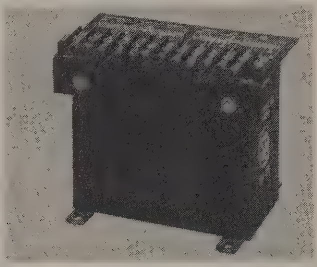


Power, inductor, reactor, current, audio.
Sizes from .125″ I.D. to 5.5″ O.D. automatic winding, larger sizes by special procedures.
High power to weight ratio.
Power to 100 VA.
Standard or custom core.
Impregnated, encapsulated.
Hermetically sealed.

Ferro-Resonant

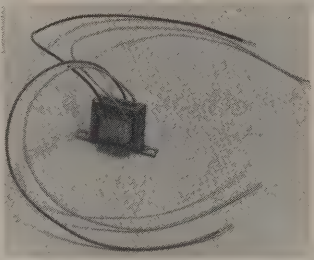
Excellent for DC power supplies.
Nearly square wave outputs.
Minimum additional components required for constant voltage output.
Open or closed construction.

Power

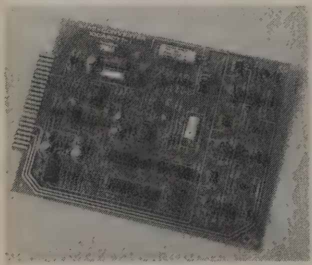


Single phase to 20 Kva. Three phase to 50 Kva.
Frequency up to 1000 Hz — Voltage to 5000 VAC
Multiple primaries and secondaries with or w/o Taps.
Electrostatic shielded windings available.
Thermal cut offs optional.
Choice of insulation, class or temperature rating.
PCB, encapsulated, open, or hermetically sealed.
U.L. to 5 Kva — CSA to 15 Kva.

Audio



Frequencies from 25 Hz to 20,000 Hz.
For impedance matching, isolation, low-insertion loss, broad frequency response.
Interstaging and other custom designs to application.
PCB, encapsulated, open and hermetically sealed versions.



PCB Assemblies

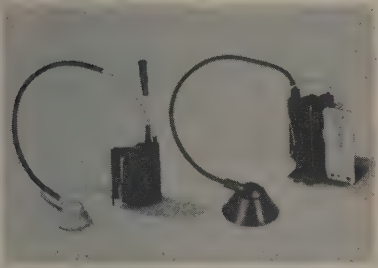
high voltage components

MURATA ERIE NORTH AMERICA, INC.

Miniature Flyback Transformers

For 14"-20" color TV and data display



FEATURES

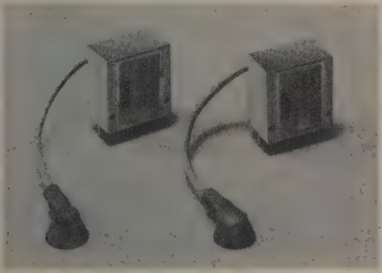
- Integral HV multiplier circuitry
- Small size
- HV resistant epoxy moldings
- Up to 25 KV output

TYPICAL SPECIFICATIONS

Items	Units	MSH-S305	MSH-S477
Input Voltage	V	112	123
Input Current	mA	360	480
Output Voltage	KV	21.0	24.0
Output Current	mA	1.0	1.0
HV Regulation	KV	under 1.4	under 2.0
HV Ringing Ratio	%	under 14	under 16
Collector Peak Voltage	Vp-p	890	1000
Secondary Voltage	V DC	(V_1) 12.5	(V_1) 28.7
Secondary Voltage	V DC	(V_2) 176.6	(V_2) 250
Secondary Voltage	V DC	—	—
Heater Voltage	V rms	6.20	6.30
Collector Pulse Width	μS	11.6	12.12
Def. Yoke Inductance	mH	2.3	1.29
Tuning Capacitance	pF	9520	10000
Primary Inductance	μH	2600	3300

Subminiature Flyback Transformers

For 1.5" to 3" black and white TVs, Viewfinders



FEATURES

- Just 49mm x 28mm x 19mm
- Integral HV multiplier
- 5 to 6 KV output
- HV resistant epoxy moldings

TYPICAL SPECIFICATIONS

Items	Units	MSH-D618	MSH-T616
Input Voltage	V	5.9	9
Input Current	mA	172	138
Input Power	W	1.01	—

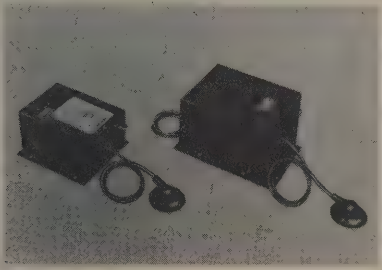
-B Voltage	V DC	−12.0	—

Miniature High Voltage Power Supplies

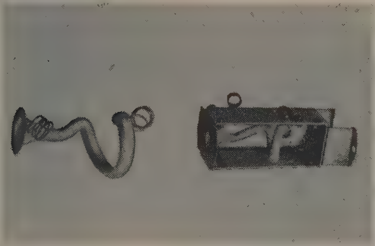


FEATURES

- Up to 17 KV output
- High, 40 KHz conversion frequency reduces size
- Provision for small-signal output control
- Built-in HV output stabilization
- Automatic overload protection
- Low output ripple
- Special epoxy resin for high reliability

CERATRON

Ceramic Electron Multipliers



These units are completely solid-state and may be substituted for standard vacuum-type electron multipliers in a variety of applications including ion, gamma ray, electron, photon and soft x-ray detection. They offer high gains to 10^6 min. and are extremely linear at up to 1 microamp. Noise figures are very low.

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E., Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

WIDEBAND TRANSFORMERS

UNBALANCED TO BALANCED TRANSFORMERS

Balanced secondaries center-tapped and dc-isolated from primaries. Mid-band insertion loss less than 0.5 dB. Bandwidth defined at low frequency end by 3 dB drop from mid-band response, at high end by max. VSWR of 1.25.

LOW POWER SERIES (1W)

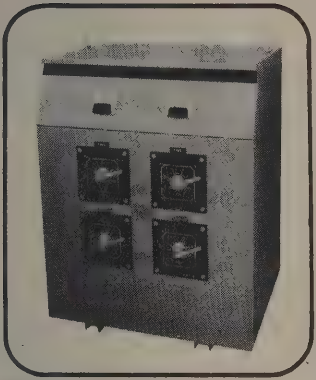
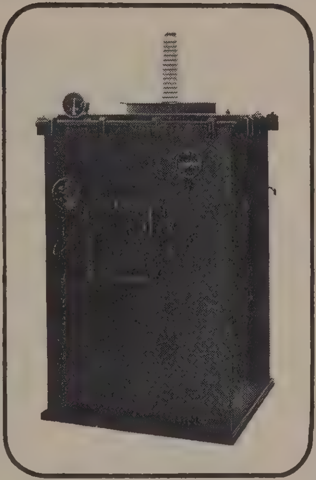
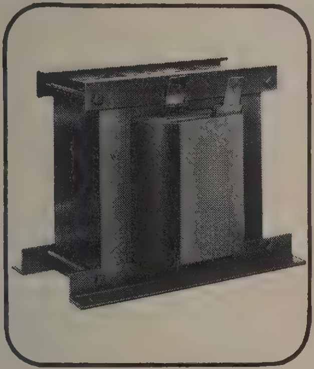
NWL ...the source for industrial and electronic transformers



Heating transformers for resistance and induction furnaces

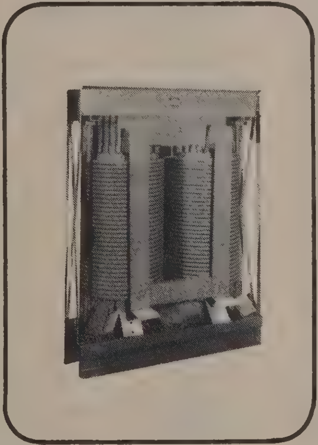


Oil-filled, high voltage Transformer/Rectifier Sets

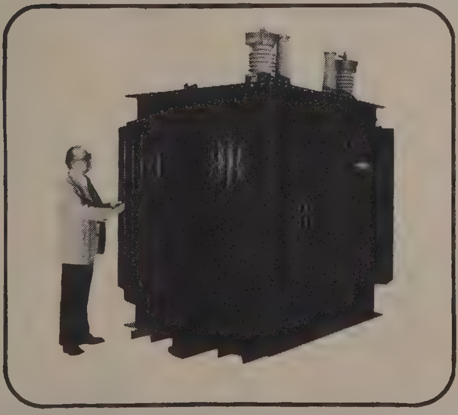


Current limiting reactors

High power and high current water cooled transformers



15 KV Class, 3,000 KVA-equivalent multiple-tapped oil-filled transformer



Since 1929, NWL has consistently been in the forefront of transformer design and manufacture.

High voltage, high frequency and high current transformers are particular strengths at NWL — whether for prototype, standard or special applications.

There's another reason you should look to NWL for solutions to your specific transformer problems. We've never hesitated to tackle the tough design problems head-on. In fact, NWL's technological superiority is a recognized fact in the precipitator, furnace, desalting, nuclear, and other fields requiring high technology.

NWL ...the source for:

TRANSFORMERS ● Furnace ● Filament ● Heating ● Lighting ● SCR Controls ● Plate ● High Frequency ● Instrument ● Phase Changing ● Welding ● High Voltage ● Testing ● High Reactance ● Output

PLUS ● Saturable Core Reactors ● Chokes ● Packaged Controls ● AC Reactors ● Air Core Reactors

MANUFACTURING RANGE

Up to 200 KV
1 ma to 50,000 AMP
4 Hz to 50 kHz
5 KVA to 6,000 KVA
Dry, Oil-Filled, Silicone Fluid-Filled, Water Cooled, and Epoxy Cast Units Available.

NWL TRANSFORMERS

Rising Sun Road ● P.O. Box 358
Bordentown, N.J. 08505
(609) 298-7300 ● TWX: 510-685-3645
Call us for quote or specs

NWL also designs and manufactures custom built AC/DC power supplies, laboratory and industrial types. See our ad under DC POWER SOURCES.

TRANSFORMERS

CONSTANT VOLTAGE

- Designed and rated for use in a full wave center tapped rectifier circuit. (Fig. 1):
- OPT's unique insulation allows all units to be rated at 150°C and can be used in higher ambients with extended life.
- Excellent common mode noise suppression characteristics. Spikes as high as 2500 volts are kept from entering the output circuits.
- 100% solids custom formulated epoxy impregnant is used to provide a quieter unit than is usually obtained with most constant voltage transformers as well as providing cooler operation.
- Windings can be connected for dual (+ or −) output voltages by adding another set of diodes. The sum of the + and − currents equals the total rating of the winding.
- Double output voltage at one half of the rated current is possible with a bridge rectifier. (Fig. 2)
- Output voltage remains essentially constant over input line swings of plus and minus 15%.
- Nominal output voltage is set to +/− 2%.
- UL recognized insulation system (UL 1446).
- Will meet international safety standards.
- Resonant capacitor furnished with each unit.

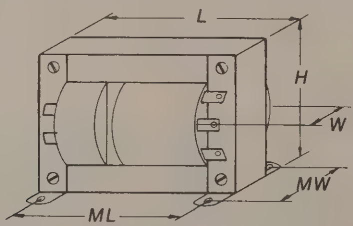
AV — Average Voltage

* Rise in DC Volts. If application has a complete no load condition, it may be necessary to use a Bleeder Resistor.

† Dual Complementary Outputs (e.g. ±12V, or ±15V) may be achieved by use of a center-tapped Bridge Rectifier. In this application, DC current for each side would be halved. Cf — ½ value in MFD, same DCWV, D_1, D_2 — ½ PIV, ½ I/Cell (4 Diode). (See Fig. 2)



Size (VA)	L	W	H	ML	MW	Lbs.	Mtg. Screw

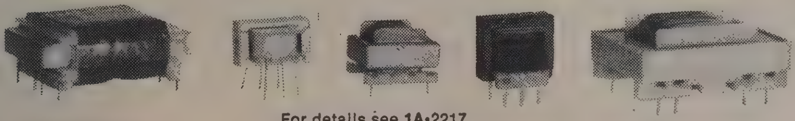
TTC SERIES
COUPLING TRANSFORMERS - HYBRID TRANSFORMERS - HOLDING COILS

The **TTC SERIES** has been developed to meet telephone interconnect, coupling, matching and bridging requirements for use in voice, instrumentation and modem applications. **This series meets FCC PART 68 requirements.**



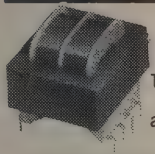
For details see **1A•2217**

DP SERIES
ENCAPSULATED AUDIO TRANSFORMERS

The **DP SERIES** is cost effective for applications involving severe environments. This series is tested to the requirements of **MIL-T-27** and several part numbers meet **FCC PART 68.**

For details see **1A•2216**

3F SERIES
3-FLANGE BOBBIN POWER TRANSFORMERS



The **3F SERIES** offers 2500V RMS dielectric breakdown testing primary-to-secondary (side-by-side winding type). They are available with single and dual primary connections for 115V, or 115/230V, 50/60 Hz circuits.

For details see **1A•2219**

PEP SERIES
UL-1411 RECOGNIZED POWER TRANSFORMERS

This series complies with the safety requirements of most **WORLDWIDE AGENCIES** (UL, CSA, Europe-IEC 65 and Japan-MITI) including 4000V RMS dielectric breakdown testing primary-to-secondary.

For details see **1A•2218**

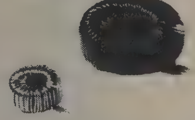
FILE NUMBER
E59673
TAMRADIO

STT SERIES
ENCAPSULATED SCR AND TRIAC TRIGGER TRANSFORMERS

The **STT SERIES** provides line isolation in SCR and Triac controlled circuits. **STT TRIGGER** transformers pass **2600V RMS** dielectric breakdown testing and are completely encapsulated for applications involving severe environments.

For details see **1A•2216**

POWER AND NOISE ABSORBING INDUCTORS



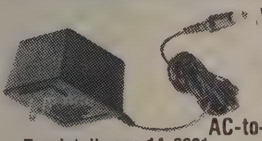
The **SKC SERIES** of toroidal power inductors are gapped for energy storage circuits with DC ratings from **5 to 50A DC.**

The **SKL SERIES** is functionally gapped for circuits requiring high ''L'' at low DC amps and nominal ''L'' at rated DC amps.

The **SKP SERIES** is designed on powered iron toroidal cores for RFI and EMI filtering and noise absorbing applications.

For details see **1A•2220**

WALL PLUG-IN AC TO DC POWER SOURCES



This series of wall plug-in AC-to-DC battery chargers, battery eliminators and power supplies are available in a complete variety of input plug-in styles and comply with worldwide safety agency requirements.

AC-to-AC Wall Plug-in Transformers Are Available

FILE NUMBERS

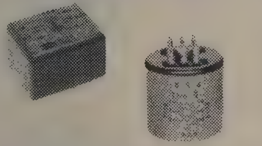
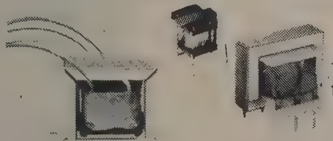
PROFESSIONAL AUDIO TRANSFORMER SERIES



This series is widely used in high performance applications and meets most requirements of communications, broadcasting, recording and measuring apparatus. Available in solder lug, lead and printed circuit mounting styles; these transformers are metal cased. Several part numbers are electrostatic and MU-metal shielded.

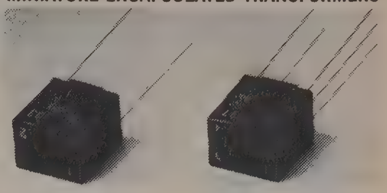
ATT SERIES
AUDIO TRANSFORMERS



These cost effective, volume produced transformers are available for impedance matching circuits and sound distribution systems. They are available as printed circuit, solder lug and lead styles.

Quality magnetic components at competitive prices . . . including COILS, POWER & AUDIO TRANSFORMERS, INDUCTORS, PULSE TRANSFORMERS, NOISE SUPPRESSION COILS, DC-DC CONVERTER TRANSFORMERS, PLUG-IN BATTERY CHARGERS and SWITCH-MODE POWER SUPPLY TRANSFORMERS & INDUCTORS. Our diversified manufacturing facilities are located in Taiwan, Malaysia and Japan. For details on standard and special requirement products, pricing and delivery—contact our headquarters.

MINIATURE ENCAPSULATED TRANSFORMERS



Small Size . . . . 0.310″ × 0.410″ X 0.465″
Gold Plated Leads . . . . 0.020″ Nickel
Response . . . . ± 2dB, 300 Hz to 100 KHz
Impedance Range . . . . 3.2 to 200K Ohms
Meets Requirements of MIL-T-27 as TF5S21ZZ

DP SERIES ENCAPSULATED AUDIO TRANSFORMERS

The **DP SERIES** of encapsulated audio transformers are cost effective for applications involving severe environments. Completely encapsulated, these small audio transformers eliminate environmental and board washing problems associated with open style transformers. The environmental quality of the **DP SERIES** is established through testing for humidity, immersion, solvent resistance and temperature cycling to the exacting reqirements of MIL-T-27. Several part numbers meet the requirements of **FCC PART 68** for telephone or modem applications. All **DP SERIES** audio transformers have frequency response characteristics within ±2dB from 200 Hz to 20 KHz.

EI 19 DP SERIES

+Meets requirements of FCC PART 68
*Insertion loss 0.9db typical and frequency response ±0.1db, 300 to 3400 Hz and with electrostatic shield.

TTC SERIES — MEETS FCC PART 68
COUPLING TRANSFORMERS - HYBRID TRANSFORMERS - HOLDING COILS

TTC SERIES transformers and holding coils are designed to meet the performance requirements of telephone connected apparatus. They are widely used in the voice, data, isolation, bridging, matching, balancing, hybrid, and holding coil circuits of central office, PABX, subscriber telephone, modem and computer terminal equipments.

TTC Series transformers provide optimum insertion loss, frequency response, longitudinal balance, distortion, return loss, impedance matching and isolation characteristics.

THESE TRANSFORMERS MEET REQUIREMENTS OF FCC PART 68

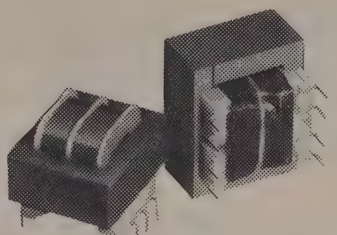
3F SERIES — 3 FLANGE BOBBIN PRINTED CIRCUIT BOARD POWER TRANSFORMERS

The **3F SERIES POWER TRANSFORMERS** are designed to include the most desirable features required for printed circuit board mounted applications. The 3F Series is constructed on a three flanged bobbin which is molded with UL listed material providing low capacitive coupling without electro-static shielding.



- 2500 VAC HIPOT, PRIMARY TO SECONDARY ISOLATION

- 115V SINGLE OR 115/230V DUAL PRIMARY
- TERMINAL NUMBERS ARE MOLDED ON BOBBIN

- COMPLIES WITH MOST UL SAFETY STANDARDS

INDUCTORS FOR SWITCH-MODE POWER REGULATOR, CONTROL AND NOISE FILTERING CIRCUITS

The **SKC SERIES INDUCTORS** are designed on gapped toroidal tape wound cores for DC switching power supply, regulator and energy storage circuits — DC current ratings **5 to 50 AMPS DC.**

The **SKL SERIES INDUCTORS** are designed on functional gapped toroidal tape wound cores for power circuits requiring high inductance at low DC currents and nominal inductance at rated DC amps.

The **SKP SERIES INDUCTORS** are designed on powered iron toroidal cores for RFI and EMI filtering and other noise absorbing applications. Also, **SKP SERIES INDUCTORS** are most useful in DC circuit applications, available in a wide range of ''L'' values and DC current ratings to **40 AMPS DC.**

UL, CSA AND VDE LISTED WALL PLUG-IN AC-TO-DC BATTERY CHARGERS AND ELIMINATORS

These AC-to-DC plug-in power sources are useful as battery chargers, battery eliminators and DC power supplies. They are available in direct plug-in and desk top styles with a variety of output connectors. Most have capacitor filtered outputs. A complete variety of worldwide input plug-in styles are available and each style meets the respective safety agency requirements.

Special order options include:
Multiple listing and your logo; multiple or regulated outputs; UL-1244 for instruments floating above ground; and AC-to-AC direct plug-in transformers.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

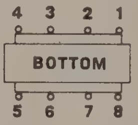
TOTAL SERIES VOLTS

PINS LOCATOR



Paraline manufactures a wide variety of power transformers. They are stocked in 11 different sizes with 32 available secondary voltages totaling over 1600 different types.

There are five general series designations, each series designed to suit the requirements of your particular application.

A brief description of each series is as follows:

- The "SS" series has a single 115V primary and a single center-tapped secondary. Also available with a 230V primary.
- The "CS" series has a single 115V primary and two identical and separate secondaries. Also available with a 230V primary.
- The "DS" series has dual primaries for 115V or 230V operation and two identical and separate secondaries.
- The "MS" series has dual primaries for 115V or 230V operation and two center-tapped secondaries designed for 5V and 15V logic and OP amp power supplies.
- The "TT" series includes a number of coupling transformers, holding coils, and telephone associated devices for use in interconnective data modem terminals.

All Paraline stock power transformers may be used for 50 Hz or 60 Hz applications.

PARALINE CS SERIES

THE PARALINE CS SERIES WITH STANDARD 117V (50-60 Hz) PRIMARIES IS AVAILABLE FROM STOCK WITH SINGLE PRIMARY AND DUAL SECONDARY 6 PIN PRINTED CIRCUIT CONFIGURATION.

LOW PROFILE SPLIT BOBBIN PRINTED CIRCUIT POWER TRANSFORMERS

- Low profile — allows closer printed circuit board stacking
- Split bobbin construction — center flange insulation barrier provides 2500 VRMs Hipot — non concentric coil winding results in low interwinding capacitance, eliminates need for electro-static shielding.
- Class S (130°C) insulation system
- Single 115V and dual 115V/230V primaries are standard.
- Dual secondaries for variety of utilization
- 12 pin bobbin design increases available options for multi-winding special orders
- Low regulation
- Units are inspected and tested 100%
- Low prices — no minimum quantity requirements

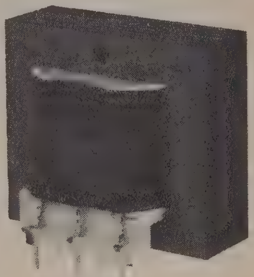
PLUG-IN PRINTED CIRCUIT TELEPHONE COUPLING TRANSFORMERS



Designed for Interconnection of Voice/Data Modem Terminals to Telephone Lines.

- Frequency response ±0.5dB 300Hz-3500Hz
- Power level −45dbm to +7dbm
- Longitudinal balance — per FCC Part 68
- Distortion — 0.5% max.
- Impedance matching ±10% over frequency range
- Return loss — 26dB min.
- Units are inspected and tested 100%
- Low prices — no minimum quantity requirements

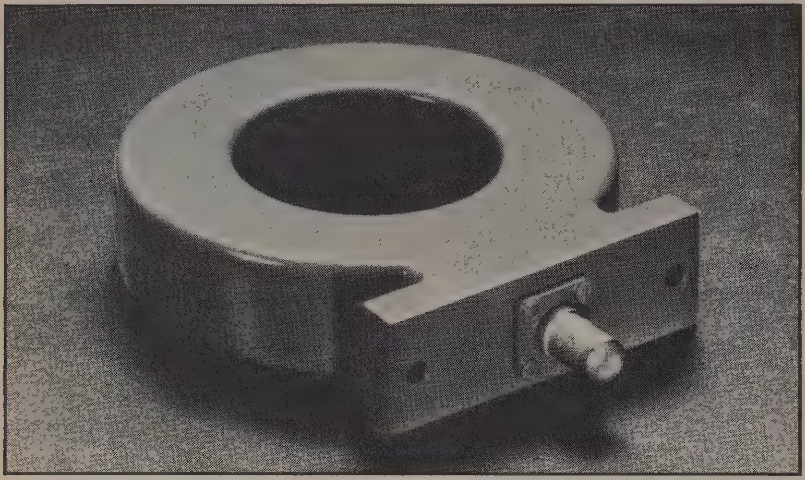
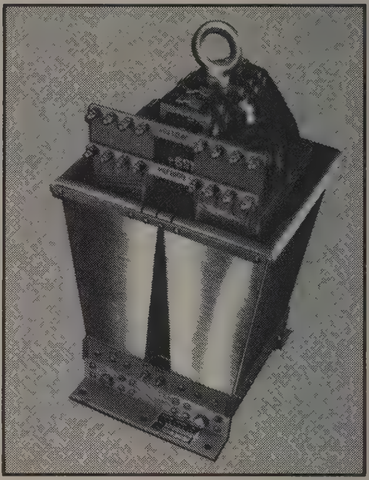
PEARSON ELECTRONICS, INC.





Wide Band, Precision Current Monitor Transformers

With a Pearson current monitor and an oscilloscope, you can measure pulse or ac currents from milliamperes to kiloamperes, in any conductor or beam of charged particles, at any voltage level up to a million volts, at frequencies up to 250 MHz or down to below 1 Hz.

The monitor is physically isolated from the circuit. It is a current transformer capable of highly precise measurement of pulse amplitude and waveshape. The one shown above, for example, offers pulse-amplitude accuracy of + 1%, − 0% (typical of all Pearson current monitors), 20 nanosecond rise time, and droop of only 0.5% per millisecond. Three db bandwidth is 1 Hz to 35 MHz. Whether you wish to measure current in a conductor, an electron device or a particle accelerator, it is likely that one of our off-the-shelf models (ranging from ½″ to 10¾″ ID) will do the job. In addition to our standard models, we build many custom designed current transformers to meet special needs and applications.

Very High Voltage & Very High Current

Pulse Transformers

Pearson Electronics specializes in the development, design and manufacture of high and super high voltage pulse transformers. Typical of the applications for which we have designed and manufactured pulse transformers are units for supplying beam power to high power microwave tubes such as klystrons and traveling wave tubes, units providing pulse voltage to particle accelerator injection systems, pulsed x-ray tubes and high power lasers.

PERKIN-ELMER

PRECISION TOROIDAL TRANSFORMERS

- **INPUT SCOTT T**
- **REFERENCE ISOLATION**
- **OUTPUT SCOTT T**
- **DIGITALLY TAPPED**
- **COMBINATION**
- **PRECISION RATIO**
- **RESOLVER ISOLATION**
- **CUSTOM DESIGNS**

The Electronic Products Department of the Perkin-Elmer Corporation is in a unique position to provide Custom Precision Signal Transformers as a result of 20 years of experience designing and manufacturing very special transformers for the Vernistat® a.c. potentiometer and allied products. **High Performance in small size has always been a successful objective.** Our State of The Art Winding Equipment and Techniques enable close control of turns and taps for close matching of windings and repeatibility of product.

Perkin-Elmer can provide Custom Signal Transformers with high accuracies over the full MIL temperature range. For example, exponential function units with 80 taps to an accuracy of ±0.003% can be provided. SCOTT T Transformers have been built to an accuracy of 5 seconds of arc with a null of 0.1 millivolt. The transformers are fully encapsulated toroidal units and are available with contact pins for PC board mounting. They are manufactured in accordance with MIL-T-27C Grade 5. High input impedance and low output impedance can be matched to specifications. Operating frequency can also be per specifications.

SCOTT T TRANSFORMERS

The SCOTT T input transformers converts 3 wire synchro inputs to 4 wire resolver outputs (sin θ and cos θ) with high transformation accuracy and minimum quadrature. SCOTT T Transformers for converting 4 wire resolver inputs to 3 wire synchro outputs can also be supplied. Our output SCOTT T Transformers maintain high accuracies even under heavy load conditions. These units are useful in solid state synchro to digital and digital to synchro converter applications and are particularly applicable in multiplexed conversion systems.

PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

PICO Catalog Contents

22 PAGES OF MINIATURIZED TRANSFORMERS OPERATING OVER THE FREQUENCY RANGE OF 20 Hz TO 250 KHz, WITH PULSE TRANSFORMERS OPERATING TO 32MHz.

AUDIO TRANSFORMERS ARE ARRANGED ACCORDING TO SIZE WITH 1/4″ X 1/4″ (400 Hz-250 KHz) SHOWN FIRST, AND THE 3/4″ X 13/16″ (20 Hz-25 KHz) SHOWN LAST.

PULSE TRANSFORMERS .05μSEC TO 100μSEC WITH MINIATURIZED PLUG-IN CONSTRUCTION.

400 Hz POWER TRANSFORMERS. PRIMARY VOLTAGES OF 115V OR 26V. PLUG-IN CONSTRUCTION. ULTRA-MINIATURE SIZE.

ULTRA MINIATURE D C —D C CONVERTER TRANSFORMERS.

MICROPHONE/TRANSDUCER AUDIO INPUT TRANSFORMERS.

MINIATURIZED POWER INDUCTORS

EMI COMMON MODE SUPPRESSION INDUCTORS

MINIATURE HIGH "Q" INDUCTORS

*INCLUDES ELECTROSTATIC SHIELD

*** Discount Prices: 1-9 Net; 10-24 less 10%; 25-49 less 16%; 50-99 less 23%; 100-499 less 30%
Ordering Instructions: No minimum. Net 30 days F.O.B. Mt. Vernon, New York. P.O. Box 1206

SPECIFICATIONS

- MIL-T-27: . . . . All Units Meet MIL-T-27, Military Designation is TF5R21ZZ for Transformers, TF5R20ZZ for Inductors.
- FREQUENCY RESPONSE: . . . . ±3dB, 400 Hz-250 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: . . . . 5% With Rated Power Level at 1 KHz and 400 Hz.
- DIELECTRIC STRENGTH: . . . All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: . . . Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: . . . . 1.1 Grams.
- OPERATING TEMPERATURE: . . -55°c to +105°c (All Units Can Be Supplied to Class S Requirements, +130°c).
- TERMINALS: . . . . Solid .012 Diameter Conductor. Conductor is copper clad steel, Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . . 25 Cycles, Method 107D, MIL-STD-202E, Test Condition A-1.

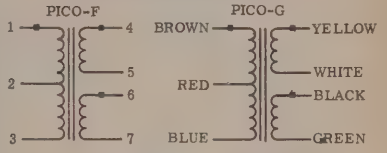
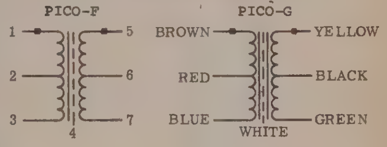
F SERIES Plug-In

G SERIES Insulated Leads

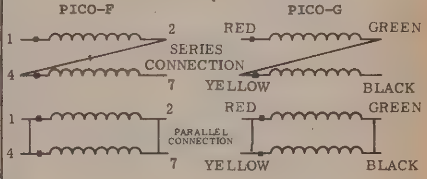
SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- 5 MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

This Product is Patented

INDUCTORS

INDUCTORS

ALL INDUCTORS HAVE SPLIT WINDINGS AND MEASUREMENTS ARE LISTED FOR BOTH SERIES AND PARALLEL CONNECTIONS. TWO VALUES OF INDUCTANCE, EACH AT A PARTICULAR VALUE OF D.C. CURRENT, ARE LISTED FOR EACH INDUCTOR.

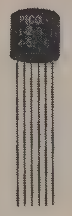
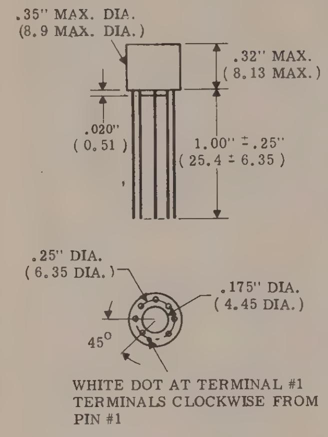
PICO Electronics, Inc.

453 N. MacQuesten Pkwy. Mt. Vernon, N.Y. 10552 • 914-699-5514

PICO's ultra-miniature transformers

W SERIES
Plug-In





DIMENSIONS ARE IN INCHES (MM)

SPECIFICATIONS

- MIL-T-27: . . . .
All Units Meet MIL-T-27. Military Designation is TF5R21ZZ for Transformers, TF5R20ZZ for Inductors.

- FREQUENCY RESPONSE: . . . .
±3dB, 400 Hz-100 KHz at 1.0 Milliwatt.

- MAXIMUM DISTORTION: . . . .
5% With Rated Power Level at 1 KHz and 400 Hz.

- DIELECTRIC STRENGTH: . . . .
All Units Tested at 200 V RMS.

INSULATION RESISTANCE: . . .
Greater Than 10,000 Megohms at 300 V DC.

- WEIGHT: . . . .
2.5 Grams.

- OPERATING TEMPERATURE: . .
-55°c to +105°c (All Units Can Be Supplied to Class S Requirements, +130°c)

- TERMINALS: . . . .
Solid .016 Diameter Conductor. Conductor is Copper Clad Steel. Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.

- THERMAL SHOCK: . . . .
25 Cycles, Method 107D, MIL-STD-202E, Test Condition A-1.

WXX-SHIELD	MU-METAL SHIELD .395"D x .33"H (10mmD x 8.4mmH) USE WITH W SHIELD FOR DOUBLE SHIELDING											1.80

*INCLUDES ELECTROSTATIC SHIELD

INDUCTORS

ALL INDUCTORS HAVE SPLIT WINDINGS AND MEASUREMENTS ARE LISTED FOR BOTH SERIES AND PARALLEL CONNECTIONS. TWO VALUES OF INDUCTANCE, EACH AT A PARTICULAR VALUE OF D.C. CURRENT, ARE LISTED FOR EACH INDUCTOR.

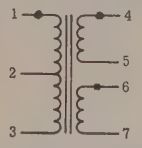
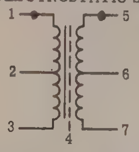
PICO's ultra-miniature transformers

W SERIES Plug-In

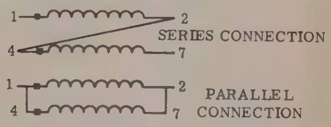
SCHEMATICS FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

This Product is Patented

Delivery—
stock to one week

PICO Electronics, Inc.

453 N. MacQuesten Pkwy.

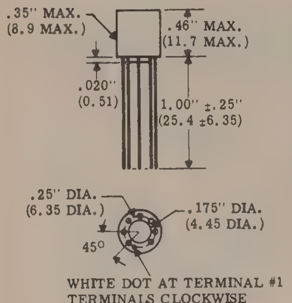
PICO's ultra-miniature transformers

Y SERIES Plug-In



DIMENSIONS ARE IN INCHES (MM)

SPECIFICATIONS

- MIL-T-27: . . . .
All Units Meet MIL-T-27, Military Designation is TF5R21ZZ, for Transformers, TFR20ZZ for Inductors.

- FREQUENCY RESPONSE: . . .
±3db, 300 Hz - 100 KHz at 1.0 Milliwatt.

o MAXIMUM DISTORTION: . . .
5% With Rated Power Level at 1 KHz, 400 Hz and 300 Hz.

- DIELECTRIC STRENGTH: . . .
All Units Tested at 200 V RMS.

- INSULATION RESISTANCE: . .
Greater Than 10,000 Megohms at 300 V DC.

- WEIGHT: . . . .
3 Grams

- OPERATING TEMPERATURE: .
-55°c to +105°c (All Units Can Be Supplied to Class S Requirements, +130°C).

- TERMINALS: . . . .
Solid .016 Diameter Conductor.
Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.

- THERMAL SHOCK: . . . .
25 Cycles, Method 107D, MIL-STD-202E, Test Condition A-1.

INDUCTORS

ALL INDUCTORS HAVE SPLIT WINDINGS AND MEASUREMENTS ARE LISTED FOR BOTH SERIES AND PARALLEL CONNECTIONS.

TWO VALUES OF INDUCTANCE, EACH AT A PARTICULAR VALUE OF DC CURRENT, ARE LISTED FOR EACH INDUCTOR.

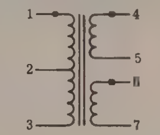
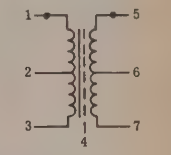
PICO's ultra-miniature transformers

Y SERIES Plug-In

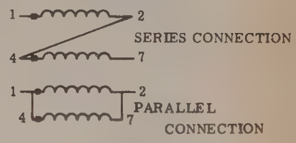
SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS

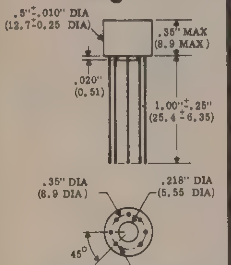
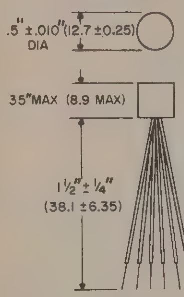
PICO's ultra-miniature transformers

L SERIES
Plug-In



WHITE DOT AT TERMINAL #1
TERMINALS CLOCKWISE FROM
PIN #1

P SERIES
Insulated
Leads



Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27 . . . .
All Units Meet MIL-T-27 and are Hermetically Sealed in a Metal Case. Audio Transformers are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . .
±3db, 300 Hz - 75 KHz At 1.0 Milliwatt
- MAXIMUM DISTORTION: . . . . .
5% With Rated Power Level at 1 KHz, 400 Hz and 300 Hz
- DIELECTRIC STRENGTH: . . . .
All Units Tested at 200 V RMS
- INSULATION RESISTANCE: . . .
Greater than 10,000 Megohms at 300 V DC
- WEIGHT: . . . .
5 Grams
- OPERATING TEMPERATURE: . .
-55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c maximum)
- TERMINALS: . . . .
Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . .
25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

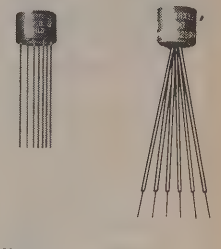
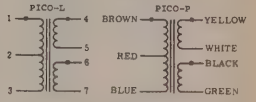
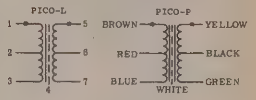
L SERIES Plug-In   P SERIES Insulated Leads



SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

PICO Electronics, Inc.

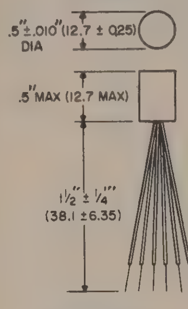
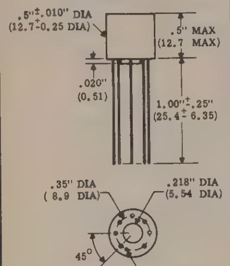
PICO's ultra-miniature transformers

K SERIES Insulated Leads



N SERIES Plug-In



WHITE DOT AT TERMINAL #1
TERMINALS CLOCKWISE FROM PIN #1

Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27 . . . .
All Units Meet MIL-T-27, and Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . .
±3 db, 150 Hz - 75 KHz at 1.0 Milliwatt (When Primary Impedance ≥ 50K Ohms, ±3 db 150 Hz to 20 KHz)
- MAXIMUM DISTORTION: . . . .
5% With Rated Power Level at 1 KHz, 400 Hz and 150 Hz
- DIELECTRIC STRENGTH: . . . .
All Units Tested at 200 V RMS
- INSULATION RESISTANCE: . . .
Greater Than 10,000 Megohms at 300 V DC
- WEIGHT: . . . .
7.5 Grams
- OPERATING TEMPERATURE: . .
-55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c maximum)
- TERMINALS: . . . .
Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . .
25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

Delivery: Stock to one week

This Product is Patented

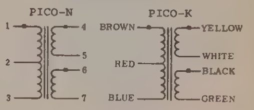
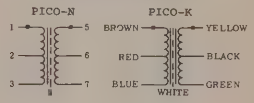
K SERIES
Insulated
Leads

N SERIES
Plug-In

SCHEMATIC FOR TRANSFORMERS
WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS
WITH ELECTROSTATIC SHIELD



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

PICO
Electronics, Inc.

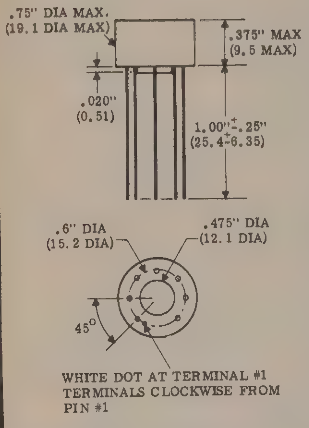
PICO's ultra-miniature transformers

R SERIES Plug-In



Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27: . . . .
All Units Meet MIL-T-27 And Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.

- FREQUENCY RESPONSE: . . .
± 3 db, 75 Hz - 30 KHz at 1.0 Milliwatt.

- MAXIMUM DISTORTION: . . .
5% With Rated Power Level at 1 KHz, 300 Hz and 75 Hz

- DIELECTRIC STRENGTH: . . .
All Units Tested at 200 V RMS.

- INSULATION RESISTANCE: . .
Greater Than 10,000 Megohms at 300 V DC.

- WEIGHT: . . . .
12 Grams

- OPERATING TEMPERATURE: .
-55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c Maximum).

- TERMINALS: . . . .
Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.

- THERMAL SHOCK: . . . .
25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

This Product is Patented

Delivery— stock to one week

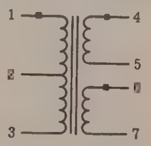
PICO's ultra-miniature transformers

R SERIES Plug-In

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD

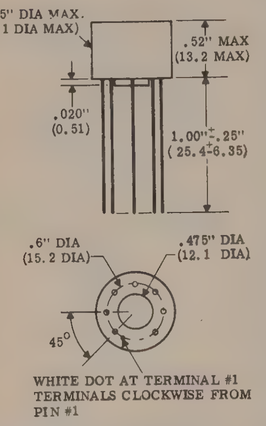
Delivery— stock to one week

PICO's ultra-miniature transformers

S SERIES
Plug-In



Dimensions are in inches (MM)

SPECIFICATIONS

- **MIL-T-27:** . . . .
All Units Meet MIL-T-27
And Are Hermetically Sealed in a
Metal Case, Audio Transformers
Are Type TF5R21ZZ.
- **FREQUENCY RESPONSE:** . . .
± 3 db, 50 Hz - 30 KHz at 1.0
Milliwatt. (±0.5 db, 300 Hz-5 KHz)
- **MAXIMUM DISTORTION:** . . .
5% With Rated Power Level at 1 KHz,
300 Hz and 50 Hz.
- **DIELECTRIC STRENGTH:** . . .
All Units Tested at 200 V RMS.
- **INSULATION RESISTANCE:** . .
Greater Than 10,000 Megohms
at 300 V DC.
- **WEIGHT:** . . . .
17 Grams
- **OPERATING TEMPERATURE:** .
-55°c to 105°c (All Units Can Be
Supplied to Class S Requirements
130°c Maximum).
- **TERMINALS:** . . . .
Solid .020 Conductor,
Copper Clad Steel
Tinned 100%, Electroplated
Per MIL-T-10727A and
ASTM CCS B452
- **THERMAL SHOCK:** . . . . . .
25 Cycles, Method 107C,
MIL-STD-202D, Test Condition A-1

PICO's ultra-miniature transformers

S SERIES Plug-In

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

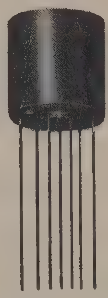
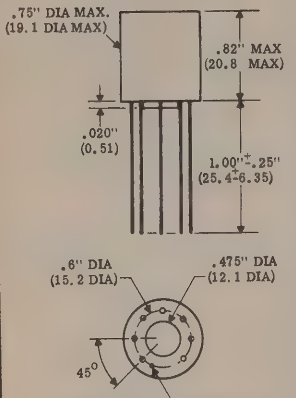
ultra-miniature transformers

T SERIES
Plug-In





WHITE DOT AT TERMINAL #1
TERMINALS CLOCKWISE FROM PIN #1

Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27: . . . . All Units Meet MIL-T-27 And Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . ± 3 db, 20 Hz - 25 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: . . . 5% With Rated Power Level at 1 KHz and 300 Hz. 10% Distortion at 20 Hz.
- DIELECTRIC STRENGTH: . . . All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: . . Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: . . . . 28 Grams
- OPERATING TEMPERATURE: . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c Maximum).
- TERMINALS: . . . . Solid .020 Conductor, Copper Clad Steel Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452
- THERMAL SHOCK: . . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

This Product is Patented

***Discount Prices: 1-9 Net; 10-24 less 10%; 25-49 less 16%; 50-99 less 23%; 100-499 less 30%

Ordering Instructions: No minimum. Net 30 days F.O.B. Mt. Vernon, New York. P.O. Box 1206

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

SPECIFICATIONS

- MIL-T-21038: Units Meet MIL-T-21038 and are Hermetically Sealed in a Metal Case
- DIELECTRIC STRENGTH: All Units tested at 200 V RMS
- INSULATION RESISTANCE: Greater than 10,000 Megohms at 300 V DC
- WEIGHT: 1.1 Grams
- OPERATING TEMPERATURE: -55°c to 105°c (All Units Can be Supplied to Class S Requirements 130°c maximum)
- TERMINALS: Solid .012 Diameter Conductor. Conductor is copper clad steel, Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: 25 Cycles, Method 107C, MIL-STD-202D. Test Conduction A-1

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- BUILT TO MIL-T-21038
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

PICO Electronics, Inc.

453 N. MacQuesten Pkwy. Mt. Vernon, N.Y. 10552 • 914-699-5514

Ultra Miniature DC-DC Converter Transformers

Input Voltages of: 5V, 12V, 24V and 48V

Power Levels up to 40 Watts

All units are magnetically shielded

All units can be supplied with higher or lower output voltages. (Example, size 2 can have output voltage of 400V D.C.)

Delivery - stock to one week, special voltages 9 days.

FEATURES

1) Units can be used as self-saturating or for linear switching applications. Operation over ambient temperature range from −55°c to +105°c. All units meet the requirements of MIL-T-27 (TF5S40ZZ)
2) All units can be supplied with higher or lower secondary voltages at the same power levels.
3) Secondary can be connected for full-wave bridge or dual bridge.
4) All units are magnetically shielded.

SCHEMATIC FOR SIZES 1, 2 & 3 USING TRANSFORMERS AS SELF-SATURATING

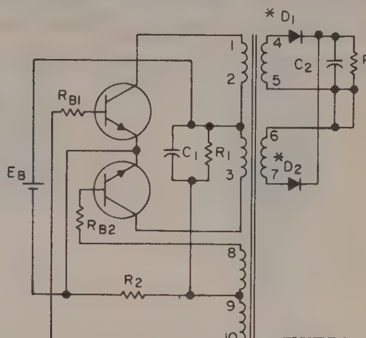

FIGURE D

SCHEMATIC FOR SIZES 1, 2, AND 3 USING TRANSFORMERS AS LINEAR SWITCHING

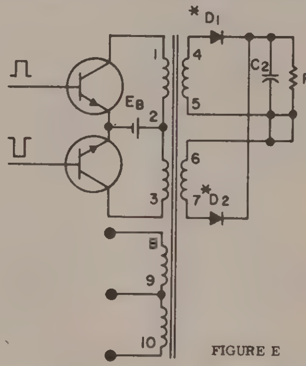

FIGURE E

* D1 AND D2 USE SCHOTTKY OR FAST SWITCHING DIODES

SCHEMATIC FOR SIZES 4, 5 & 6 USING TRANSFORMER AS SELF-SATURATING

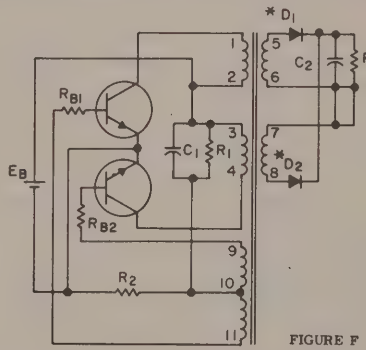

FIGURE F

SCHEMATIC FOR SIZES 4, 5 & 6 USING TRANSFORMERS AS LINEAR SWITCHING.

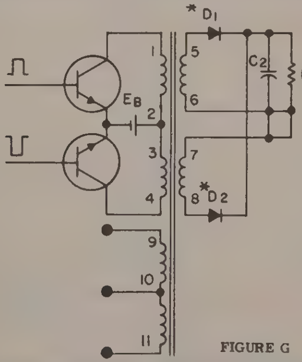

FIGURE G

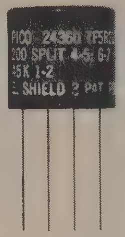
*D1 & D2 USE SCHOTTKY OR FAST SWITCHING DIODES

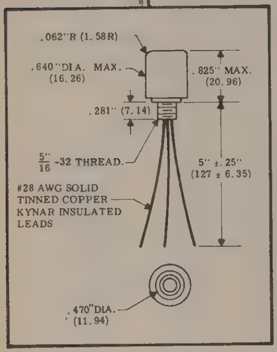
PICO Microphone/Transducer Audio Input Transformers

Used for Professional Sound Studios/Broadcast Mixing Consoles/Control and Instrument Amplifiers.

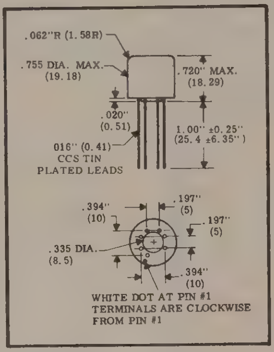
Interchangeable with transformers made by Beyer Dynamic of Germany.

PICO 23360
200 SPLIT
45K
SHIELD





NOTE
ALL DIMENSIONS ARE IN INCHES, ( ) = MM



NOTES:
ALL DIMENSIONS ARE IN INCHES, ( )=MM.
CCS-COPPER CLAD STEEL. TINNED 100%.
ELECTROPLATED PER MIL-T-10727A
AND ASTM CCS B452.

- *Large step-up ratios with flat frequency response over the entire audio range.*
- *Gapless laminations provide wide bandwidth with extremely low distortion. Use of two magnetic shields made with extra thick mu-metal and gapless core provide negligible hum pick up. All units provided with electrostatic shield.*
- *Your choice of two package styles, stud mounting with flying leads or low profile plug-in. Identical electrical performance regardless of package style.*
- *Frequency response ±1 dB, 30 Hz – 15 kHz.*
- *Low profile plug-in (24000 series) meets MIL-T-27D (TF5R21ZZ).*
- *Because of gapless laminations, unbalanced DC current should be avoided.*
- *Typical distortion of 1% at power level of 0 dBm (1 Milliwatt), 30 Hz – 15 kHz. If the low frequency is raised, the power level for 1% distortion is as follows:*

50 Hz	-	3 Milliwatts (4.7 dBm)
100 Hz	-	10 Milliwatts (10 dBm)
300 Hz	-	150 Milliwatts (21.7 dBm)

For immediate engineering assistance
or to place an order—
Call Toll Free 800-431-1064

All units have two extra thick mu-metal shields.

FEATURES

- 400 Hz Aerospace Application
- Smallest Possible Size
- Printed Circuit Plug-In Construction
- Secondary Has Split Winding (Secondary can Be Used at Half Voltage Twice the Current.)

SPECIFICATIONS

- MIL-T-27D (TF5S03ZZ)
- 90 °c Ambient
- Input Primary 115v-400 Hz ±20 Hz or 26V-400HZ-±20 Hz (Your Choice-Just Choose The Proper Part No.)
- Regulation is 24% (T Units Have Regulation of 17%)
- Secondary Voltage Adjusted to Nominal Value at Half Load.

Prem — the price leader in Low Profile Power Transformers.

- Low profile — .660" in 2.5 VA design
- ®UL Recognized Class B system*
- Three flange bobbin design — 1500 VRMS High-pot
- No electro-static shield needed

Other primary and secondary voltages may be custom-designed to your specifications. Since 12 terminals are available, tapped primaries or secondaries may also be utilized.

For further information and pricing, contact Prem's Customer Service Department.

RENCO ELECTRONICS, INC.

Custom Transformers AT STANDARD PRICES For Your Switching Power Supplies

RL 1287

The driver, interstage, and inverter transformers in all switching power supplies should be custom designed by experts. If they're not, they're apt to be overrated, bulky, and difficult to manufacture.

Custom design, however, is usually expensive. And takes time.

That's why we developed the Renco SC&B (Standard Core & Bobbin) System, which enables us to give you custom transformers at the prices you'd pay for standards. And deliver them almost as fast as we deliver our standard products.

After extensive research, we selected six standard ferrite "E" cores which are good for most applications at all popular switching frequencies; and glass filled nylon bobbins, which have excellent rigidity and high temperature performance, and can easily be mounted on printed circuit boards.

With these cores and bobbins we can custom-design your transformers, and normally ship prototypes to you within ten days. Since we always have large stocks of cores and bobbins on hand, you'll get fast delivery on your complete order. And since we buy in volume, you're never charged a premium, even for small quantity orders.

And your transformers are wound on custom engineered equipment that ensures conformance to requirements.

Other companies have copied this system. But none offer nearly as much engineering assistance as we do. All you have to do is give us your bare specs, and we'll translate them into transformers.

And none have nearly as much experience as we do. We've been exclusively engaged in the design and manufacture of coil wound products for over 30 years. So when you come to us you can be certain that your transformers will be exactly right for your application.

Just call our Engineering Hotline (800-645-5828 outside of New York State; in New York, call 516-586-5566) and tell us your requirements. Note: a small charge may be required on some designs.

All Dimensions in Inches

*Pin 1 — 2 spacing is less for polarity

DESIGN NOTES:

1 - Primary to secondary isolation 1500V RMS Min.
2 - All designs meet Class B requirements (130°C).
3 - Encapsulation available.
4 - Winding to core isolation 2500V RMS Min.
5 - Higher isolation voltages available.
6 - Higher temperature classes available.

TOLL-FREE ENGINEERING HOTLINE 800-645-5828 • RENCO ELECTRONICS, INC. • 60 Jefryn Blvd., East • Deer Park, N.Y. 11729 • (516) 586-5566 • RCA Telex No. 220-883

MADE IN USA
SHIPPED WORLDWIDE

RENCO
ELECTRONICS, INC.

FREE SAMPLES!
ENGINEERING HOTLINE!
LARGE-ORDER TREATMENT FOR SMALL ORDERS!

These are the kinds of services that have helped us become probably the leading firm exclusively in the business of making coil-wound products.

FREE SAMPLES just for the asking.

Think you could use any of the chokes described on pages 000-000? Then call our TOLL-FREE engineering Hot-Line (800-645-5828 outside of New York State; in New York State call 516-586-5566) and tell us your specs — and we'll send you a free sample. If your specs hit squarely on one of our standards (and since our line has 1428 standard values, they frequently do), we'll ship out your sample the same day.

If your specs do not exactly match any of our standards — in fact, even if they're nowhere near any of our standards — give us a call and we'll make up a custom sample. We have a special prototype and sampling laboratory that does nothing but make up custom samples. So unless you need something exceptionally complex, we'll ship your sample within 10 days.

Our Engineering Hotline is for you!

800•645•5828

Please feel free to use it even if you have no intention of giving us an order.

Use it if, for example, you're having any kind of problem with any coil wound product — ours or anyone else's. We have, after all, been making chokes, inductors, toroids, and transformers for 29 years now, so we have considerable expertise in that line. When you call the Hotline you'll be talking to an expert who won't try to sell you a thing. He'll just be helping you work out a solution to your problem, and if that solution involves a competitor's product, that's fine, too!

Even if you don't have a problem; even if there's just something you'd like to know about magnetics; or if there's something you'd like to tell us — we'd be delighted to hear from you. We actually established the Hotline because we've found, over the years, that a vital factor in our growth has been the continuous exchange of ideas with engineers who are using chokes and transformers.

Small orders get large order treatment.

Don't hesitate to call us even if you only want to order a few chokes or transformers. You'll get the same attention — and your order will go out just as fast — as if you were ordering thousands.

The reason is that we have a separate, completely independent small order department, staffed with people who are capable of handling orders for just about any kind of coil-wound product. If you order any of our standard products, our small order people go into the stockroom, take your order off the shelf, and ship it out. And if it's a special, they'll make it themselves, no matter how complex or unusual it may be.

They're really a little factory within a factory. They can read drawings. They have the machines and equipment they need to do their own winding, soldering, and testing (and years of experience in using them). When they finish your order all they have to do is bring your finished parts to QC for a final AQL, and ship it out.

And because we're set up this way, you don't have to pay a penalty for ordering small!

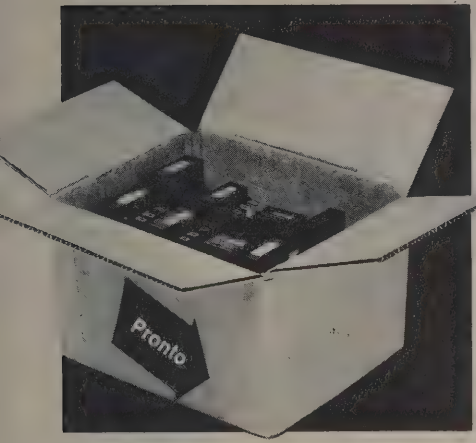
THE SIGNAL WAY OF DOING BUSINESS



PRONTO 48-Hour Shipment

We have long recognized that, in most instances, engineers and buyers need immediate delivery of transformers and chokes. To meet this challenge, Signal maintains an extensive inventory of every item in these pages — over 1,000 different transformers and chokes. More importantly, we're dedicated to shipping out each and every order (1-4 pieces guaranteed) within 48 hours, and we can usually fill your entire order. We call this service "PRONTO." Last year we shipped over 10,000 such orders and we didn't disappoint anyone.

How and Why We Are Able to Maintain Our Low Price Policy

At Signal, we sell direct. There are no salesmen or distributors — no middlemen, no extra mark-ups. We pass the savings on to you. We answer your questions directly. There is no chance of misinterpretation and you get fast accurate answers. We maintain larger inventories than any distributors could. We're able to react to your order requirements more quickly and efficiently. These savings have enabled us to install modern machinery, specify better materials and continuously invest in new R & D. In this manner our prices are kept as low as possible. We both profit from this policy.

Advanced Technology and Innovation

The basic transformer concept and design has been with us for many years. But, the state-of-the-art in electronics has changed drastically in the last 20 years, especially the last ten. We now live in a digital as well as analog world. Circuit size has shrunk and new termination methods have evolved. Again, Signal has recognized the need to develop new designs to meet these new low weight and height constraints. The result has been the development of such new and exclusive products as the SPLIT/TRAN® (see opposite page), the miniature PC board transformer featuring non-concentric windings which result in high isolation and the elimination of the need for electro-static shielding. The FLATHEAD® which has a height of only 0.65″ is still another example of creative innovation. Therefore, what many of our competitors call custom designs (matched by custom prices) often turn out to be a Signal standard product. You can depend on Signal to have the products you need when you're ready for them and, of course, always in stock.

Custom Requirements Are Welcome

We also recognize that no matter how hard we try, it is impossible to anticipate everyone's need. Therefore, we are eager to discuss and evaluate your transformer and choke requirements. If we can't recommend a standard product that will do the job and save you money and time, we'll gladly quote on your requirement. Many times all that is needed is a modification of one of our standards. Again, you will get consistently high quality and very competitive prices, whether your order is for 10 or 10,000 pieces.

We don't have anyone out in the field telling you how good we are. We have to prove it to you by deed. Thank you for considering Signal.

CONTENTS (See Following Pages)

- P.C. Board Power Transformer
  - SPLIT/TRAN® — High Isolation
  - FLATHEAD® — Low Profile
  - Standard Miniature
- Lightweight/Low-Cost Small Power Transformers ("2-4-1" Series)
- Rectifier Power Transformers
- Chokes
  - Filter
  - Dual
- Constant-Voltage Transformers for dc supplies
- Step-down Auto Transformers
- Industrial Grade Power Isolation Transformers
- Transformers for Triple-Output Regulated DC Supplies
- Ideal for Microprocessor Applications

* Available from Signal: Part No. ST-MS (Screw) & Part No. ST-MN (Nut).
† Size 7 has 4 mtg. holes on $2\frac{3}{16}$ x $1\frac{3}{4}$ centers for a #6 screw. Need not be nylon.

"Split-Tran" transformers combine the best features of our "2-4-1" Series and Signal's pioneering line of pc board miniature transformers.

The use of a "split bobbin" allows the primaries and secondaries to be wound non-concentrically, i.e., side by side rather than one over the other. This results in cost savings and superior performance, namely:

- High isolation — **2500V** hipot is standard.
- Low capacitive coupling — no electro-static shield necessary.
- Less manufacturing time — no cross-overs of primary and secondary leads.
- PC pins — allow direct insertion in PC boards.
- Class S insulation — 130°C.

Each transformer is available with single 115V or dual 115/230V primaries. In addition, secondaries are split so that they can be series or parallel connected.

Special variations will be quoted and shipped promptly.

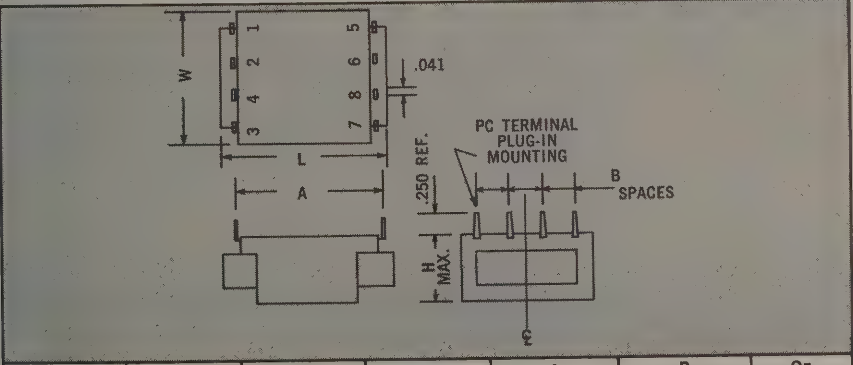
* Regulation of Size 2 and 6 units is 30%, i.e., no load-secondary voltage is 30% higher than full load. Regulation of Size 12 units is 20%.



Size	L	W	H	A	B	Oz.
2	1⅞	1 9/16	0.650	1.600	0.375	5
6	1⅞	1 9/16	0.850	1.600	0.375	7
12	2½	2	1.065	2.000	0.500	11

LOW PROFILE: Allows ¾″ card spacing for 2.5va units, 1 inch card spacing for 6va units, or 1¼″ inch card spacing for 12va units.

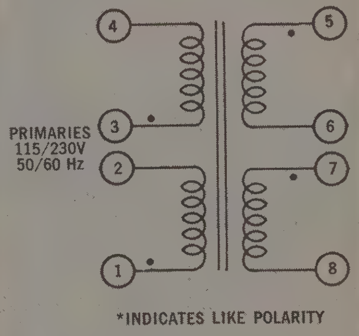
DUAL PRIMARIES: 115/230v, 50/60 Hz.

NON-CONCENTRIC WINDING: Where secondary is wound alongside primary rather than directly over it. This added isolation reduces inter-winding capacitance and **eliminates the need for an electro-static shield.**

1500V. RMS HIPOT: Is standard because of the advantage of non-concentric windings.

HUM-BUCKING CONSTRUCTION: (Semi-toroidal) results in reduced radiated magnetic field and balanced windings.

The LP line of transformers is ideal for low height, critical pc board power applications in semi-conductor control and instrumentation. They are used extensively in single or dual output dc supplies and isolated control circuit and reference supplies.



*INDICATES LIKE POLARITY

p.c. board transformers for triple-output regulated supplies

IDEAL FOR MICROPROCESSOR APPLICATIONS

"MP" types have been developed specifically for use in triple-output regulated DC supplies that are commonly used in **Microprocessor Circuits** and other logic, op-amp combinations. Two output combinations have been provided, namely 5V and ±12V, and 5V and ±15V.

All "MP" units are rated in terms of the final **DC** output after a standard three terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100 to 130V 50/60 Hz (or 200 to 260V for nominal 230V lines).

Two basic mechanical configurations are available. Standard PC types (MPC or DMPC) are tested to pass 1500V RMS hipot. Optional mounting brackets are available. MPL types are based on Signal's "flat-head" style and feature low profile, 115/230V primaries, hum-bucking construction, 1500V RMS hipot and the advantages of non-concentric winding (low inter-winding capacitance, high isolation, and no need for an electro-static shield).

All MP's are stocked in depth for immediate delivery. In addition, special variations can be supplied with reasonable delivery times.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.

"2-4-1" style split-bobbin transformers for triple-output (μp) applications (type MT)

Signal has extended its line of triple-output transformers for microprocessor applications with three new sizes rated to 100VA (35 watts DC regulated). Similar to the split-bobbin design used in Signal's "2-4-1" series, the chassis-mounted style allows for these new higher power applications.

Two output combinations are provided: 5V and ±12V; and 5V and ±15V. Designated "MT" (single primary) and "DMT" (dual primary), these transformers are rated in terms of the final DC output after a 3-terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100-130V, 50/60 Hz (or 200-260V for nominal 230V lines). All auxiliary components required to complete the DC supply are tabulated.

All MT types are stocked in depth for immediate delivery. In addition, custom variations can be supplied with minimal turnaround time.

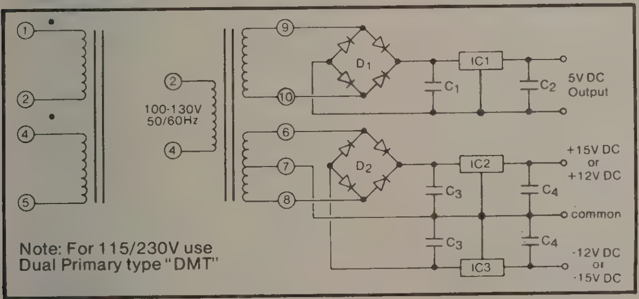
Note ① : Output capacitors C_2 and C_4 are required to stabilize regulators. Values can be 1 MFD min. tantalum or 10 MFD min. electrolytic, 20V min.
Note ② : LM-338 is an adjustable regulator and MFR's specifications (National Semiconductor) should be consulted for values of external components.
Note ③ : All IC's are National Semiconductor types.
Note ④ : All diodes are Motorola types.

SCHEMATIC



Note: For 115/230V use Dual Primary type "DMT"

. . . for printed circuits applications

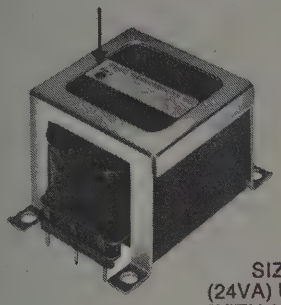
Signal has the most complete and diversified selection of miniature plug-in power transformers.

Primary ratings of 115V (Style PC - 6 Pin) or Dual 115/230V (Style DPC -8 Pin) are standard for the entire line. 1500V. Hipot is standard.

Size 1.0 is used extensively where height is a limiting factor since its height of 0.83 inches allows 1 inch spacing of PC boards. Size 24 is unusual since 24 watt PC transformers are not readily available, especially with a height of 1⅜ inches.

The RMS current ratings are based on a load regulation of 15-20% and not on temperature rise (except for the largest item, size 24). Therefore, these ratings may be exceeded without overheating, if the additional drop in full load voltage is acceptable. There is, of course, a limit and it would be best to check with our engineering department on specific units.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.



SIZE 24 (24VA) UNIT WITH 24-BR SLIDE-ON MOUNTING BRACKET

METHOD OF DETERMINING SECONDARY CURRENT RATINGS

The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type		RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	=	0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	=	1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	=	DC Amps
Full Wave Bridge	Capacitor Input	=	1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

cut size and weight with "2-4-1". . . . .

The 2-4-1 series is an illustration of the use of creative design applied to small power transformers. The result is a line where, for a given va rating, size and weight are reduced almost 50%. Hence the name "241" series.

- GRAIN ORIENTED CORE — High Saturation Density — Lower Core Loss — Less Steel and Copper.
- BOBBIN WOUND — Maximum Utilization of Winding Area — Space and Size Reduced.
- SPLIT BOBBIN — NON-CONCENTRIC WINDING — Lower Capacitance — Better Insulation — 2500V RMS Hipot — No need for Electro-Static Shield — High Isolation and Insulation Resistance. No Cross-Overs of Primary and Secondary Leads.
- SPECIAL TERMINAL — Solder or Quick-Connect.

The series is available with single 115V or dual 115/230V primary, rated 50/60 Hz. Class S insulation is used for a maximum total temperature rating of 130°C continuous.

METHOD OF DETERMINING
SECONDARY CURRENT RATINGS

The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F. W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

CUSTOM VARIATIONS

Signal is equipped to quote on Custom Variations of "241" types. The secondary combinations are restricted by the number of secondary terminals available, as follows:

Size	Maximum Number of Secondary Terminals	VA Rating
3	3	2.4
4	4	6
5	4	12
6	5	30
7	5	56
8	5	100

We answer requests promptly and can deliver prototypes in one to three weeks. Production lead times can be scheduled with very reasonable lead times.

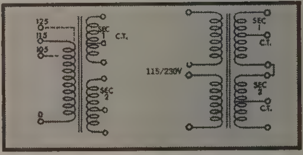
△Available with dual primary only. Therefore, prefix "DL" is not required.
‡ Nominal 115V primary has added taps, I.E., 105/115/125V, Dual (DL) version is 115/230V only.

Items shown in shaded area are not normally in stock. They are standard designs generally available in 3-4 weeks.



All transformers are designed conservatively and are rated for 50/60 Hz. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss varnish. The transformers and chokes are rugged in construction, well insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation. Hipot rating of 1500V RMS is standard.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings, which may be series or parallel connected as indicated in rating chart.

*The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

signal TRANSFORMER

filter chokes

1.0 TO 200 AMPS

Signal's line of filter chokes is the most extensive available. It is designed to complement the selection of Rectifier Power Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values. Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

Signal's Dual Chokes are supplied with 2 windings which may be series or parallel connected with rating shown on chart. This line is basically designed for application requiring lower inductance value at high currents, such as low voltage, DC supplies or SCR filters.

step down auto transformers

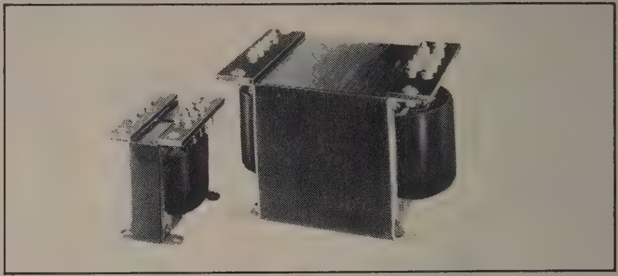
power isolation transformers

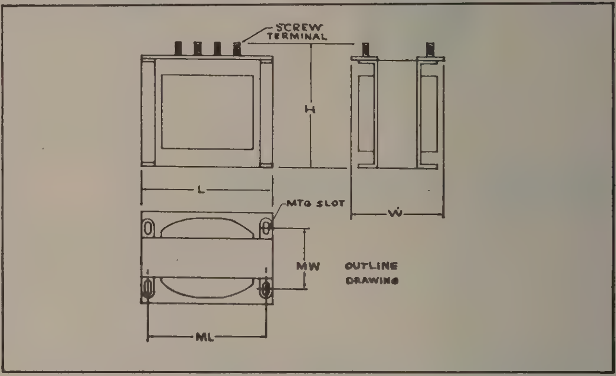
INDUSTRIAL GRADE/STEP-UP OR STEP-DOWN. MANY POSSIBLE VOLTAGE RATINGS.



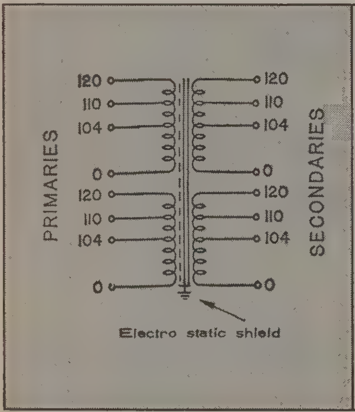
AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "SU" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation. 2500V. RMS Hipot is standard.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers (10-32 on ¼ and ½ KVA, ¼-20 on larger sizes). Connections can be easily made with a nut driver. It is also simple to alter the interconnections to change transformer ratings. **Electro static shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.



DU SERIES 110/220 Dual Primary to 110/220V. Dual Sec. (Primary & Secondary may be reversed)



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts. It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

Part No.	KVA	Series Secondaries		Parallel Secondaries		Mechanical Dimensions					Mtg. & Term. Screw	Appr. Lbs.

FIG. H

Staco variable transformers offer versatility and reliability unmatched by solid state voltage controls. Staco controls are used worldwide for industrial and laboratory applications to control voltage, current, power, heat, speed, light and electro-mechanical force. Staco variable transformers provide continuously adjustable output voltage from AC power sources without wave form distortions or SCR generated noise. Outstanding features include gold-plated commutators, precise regulation, high efficiency, conservative ratings and rugged construction.

You can select from panel mounted types, cord and plug types, ganged and/or motor driven types, metered types, and fully portable power supplies with or without meters, and ratings from 0.8 amps to 540 amps, 40 volts to 560 volts for single or three phase applications.

Staco has a nationwide network of distributors qualified to offer technical assistance whenever you need it. Additionally, the Staco Engineering Staff is available to help you with special or non-standard applications. Staco's Variable Voltage Controls handbook will be sent to you upon request ... it's loaded with illustrations, engineering data, specifications and ordering information on standard voltage controls. Prices shown are list prices at press time and are subject to change.

Ammeter equipped models available. Change suffix V to A.

VARIABLE ISOLATION TRANSFORMERS *120 VOLT INPUT SINGLE PHASE*

An exclusive by STACO, for use where the safety of isolation is required. The output voltage is completely isolated from the power line (input voltage). On uncased models, when proper external connections are made between windings, it is possible to increase the voltage or current output or input through non-isolated, voltage doubler, or series connection.

AC POWER SUPPLIES *120 VOLT SINGLE PHASE*

Portable AC Power Supplies are ideal for labs or test bench use. Housed in a ventilated steel and aluminum enclosure with carrying handle, each model is complete with a three-conductor line cord, plug & matching receptacle, pilot light, switch and circuit breaker. Metered models are available with Voltmeter, Ammeter or a Wattmeter (or a combination of meters).

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

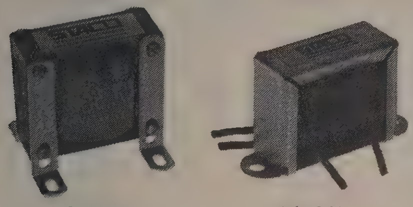
STACO TRANSPOWER® | STANDARD-CUSTOM TRANSFORMERS

• AUDIOS • POWERS • CHOKES • CONTROLS • SWEEPS • IMPEDANCE • MINIATURES •

- **5 VA to 5 kVA, 1 ϕ & 3 ϕ**
- **CUSTOM SPECIALISTS FOR OVER 40 YEARS**
- **MEET UL, VDE, CSA & INTERNATIONAL SPECS**

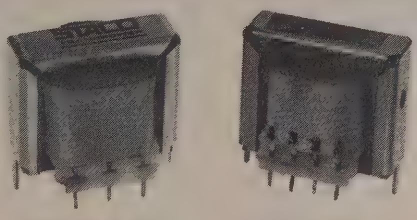
STACO transformers and chokes are available in a wide variety of standard styles and ratings to meet most normal requirements. However, STACO is also a custom specialist with nearly a half century of reliable service. It is easy to specify custom transformers or chokes to meet your specific needs. Simply send your specs to STACO, our design engineers will design a product to fit your needs. Ask for copies of the STACO Specification sheet and the current catalog. They are yours for the asking.



STYLE B STYLE C

RECTIFIER POWER

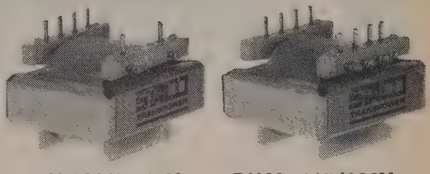
For single or dual output DC power supplies. Max. temp. rise above ambient 45°C. Standard units for single (115V) or dual (115/230V) inputs. (Some available with 105/115/125V). Outputs from 5V to 230V and from 1 to 4000 VA. Connect series or parallel. STACO type SP01A & SP01B.



SINGLE 6 PIN DUAL 8-PIN

MINIATURE P/C POWER

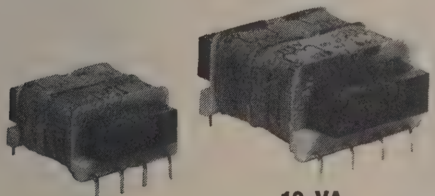
For P/C applications where between board spacing is critical. 63 standards in single (6 pin) and 63 in dual (8 pin). Ratings based on load regulation. Outputs from 5 to 230 VAC in 5 ranges from 1 to 24 VA. Connect series or parallel. STACO type SP02A & SP02B.



SINGLE 115V DUAL 115/230V

MULTI-SECTION BOBBIN P/C

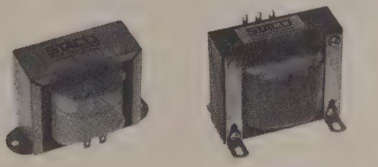
For high isolation (2500V hipot) and low capacitive coupling with superior performance at lowest cost. 60 duals and 60 singles standard in 6 VA ratings (1.1, 2.4, 6, 12, 20, 36 VA). Connect series or parallel for outputs from 5 to 120V. 6, 12, & 20 VA avail. with mtg. screw. STACO type SP03A & SP03B.



6 VA 12 VA

LOW PROFILE P/C POWER

Ultra low profile in 6 & 12 VA types. 6 VA only 0.850″ high, 12 VA is 1.065″. 11 standard ratings in each for outputs from 5 to 230 V. Connect in series or parallel. Multi-section bobbin non-concentric winding eliminates need for shielding. STACO type SP04B.



SINGLE DUAL

SMALL POWER TRANSFORMERS

Made with grain oriented core lamination for maximum efficiency at least weight and size for low cost. 110 standard ratings in single or dual outputs from 10 to 120V CT and 2.5 to 100 VA. Choice of solder or QC terminals. For operation to 130°C. Hipot 2500V RMS. STACO SP05A SP05B.

BARRIER STRIP TERMINAL

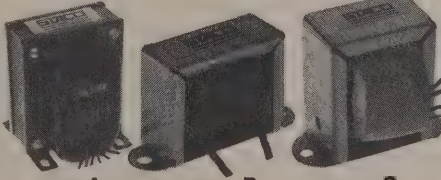
POWER ISOLATION

Step up or down industrial grade. Output .25 to 10 kVA. Either 110/220 dual primary to 110/220 secondary or 110/220 to 220/440 secondary (primary may be reversed). Supplied with rugged barrier block terminals. Hipot 2500V RMS. Tapped windings 104/110/120 and 208/220/240. STACO types SP06 & SP07.

ENCLOSED OPEN

STEP DOWN AUTOTRANSFORMERS

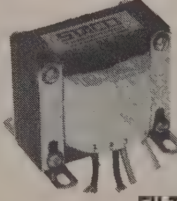
Enclosed, low regulation (ST01) or open frame (ST02) styles to 2 kVA are standard. Heavy duty to 6 kVA. Heavy duty may be used step-up or down. ST01 may be supplied with UL approved line cord and receptacle. ST02 and ST03 have 6″ leads.



A B C

AUDIO TRANSFORMERS

A wide variety of audio transformers is available from STACO. Although designed primarily for solid state applications, all models may be used in tube circuits for maximum reliability. There are 3 standard configurations as shown above plus plug in P/C models (see min. P/C above). STACO types SA01 to SA08.



FILTER

FILTER CHOKES

Both single and dual models are standard. Singles handle 0.5 to 1000 Amps, duals handle 1.0 to 50A and may be connected in series or parallel. Available in two mounting styles. 24 ratings are standard, but specials are readily available. Call for details. STACO types SC01 & SC02.

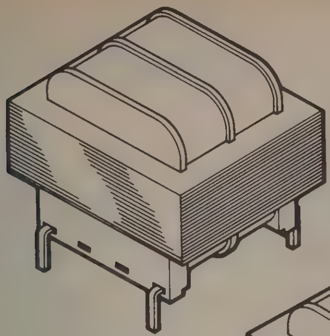
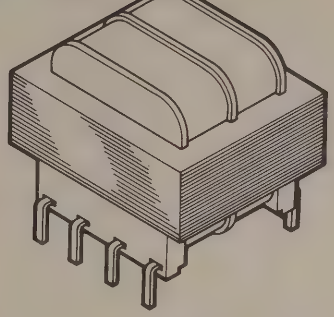
STANCOR TRANSFORMERS

"SIDE WINDER"

Split Bobbin— PC Mount Transformers



TYPE SW



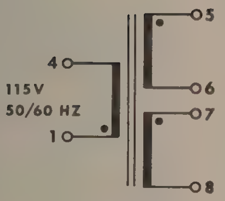
TYPE DSW

Stancor offers this compact transformer with primary and secondaries wound side by side. The "Side Winder" is non-concentrically wound, to reduce size and cost.

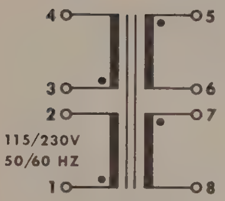
Split bobbin winding and low capacitive coupling design eliminates electrostatic shielding requirement and expense.

- High isolation…2,500 V RMS. Hi-Pot Testing
- PC Pins…Precision spaced insert directly into PC Boards
- Class B Insulation…130°C

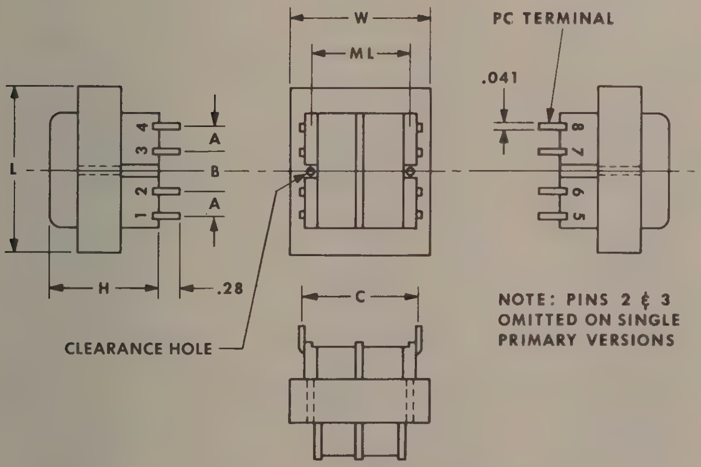
"Side Winders" are available with Single 115V or Dual 115/230V Primaries, plus, secondaries are split to permit series or parallel connection.



6 PIN
TYPE SW



8 PIN
TYPE DSW



NOTE: PINS 2 & 3 OMITTED ON SINGLE PRIMARY VERSIONS

SIDE WINDER APPLICATIONS:

Electronic Game Systems.
Computer Peripherals.
Switching Power Supplies.
Medical Electronics.
Instrumentation Equipment.
Communications Equipment.
Computer "On Board" Power.
Machine Control Logic Systems.
ROBOTICS.
Consumer Electronics.

Consult Factory For Special Design Requirements.

NEW!!

MICROPROCESSOR POWERS

Developed especially for triple output regulated DC supplies that are used in microprocessor, logic and OP-amp circuit combinations. Outputs are listed in RMS values and will deliver popular ±12 and ±15 volts with 5V standby values included.

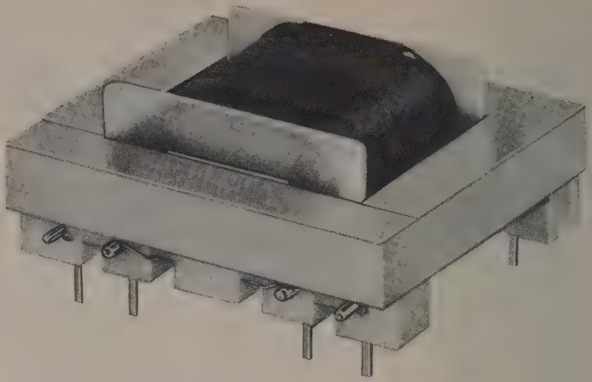
STANCOR

TELEPHONE COUPLING TRANSFORMERS



For Interconnecting Data/Voice Modem Terminals to Telephone Lines
Designed to Meet FCC Part 68
1500 Volt DIELECTRIC STRENGTH

APPLICATION DATA

Stancor's TTPC series transformers are designed to meet the high performance requirements of today's phone interconnect and instrumentation applications. Stancor has the broadest range of units for general use in impedance matching, circuit isolation, line balancing or bridging, and hybrid applications.

TTPC transformers are ideal for use in voice and data interconnect networks such as modem terminal connection to telephone lines. Stancor's units will handle 1500 volts dielectric breakdown and meet FCC Part 68 requirements.

POWERSTAT® Variable Transformers now

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

TYPE L10B

TYPE L116B

Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with metered knobs. Stationary voltmeter does not turn with knob. Voltmeter accurate within ±3% of full scale and insensitive to stray magnetic fields. When ordering, add VS prefix to type number. *Back-of-panel* mounted types in the 21-22 through 146-246 series can be combined with Metered Knob Assemblies. Existing models can be retrofitted also. Assembly type VS150 has a 0-150 volt scale and type VS300 has 0-300. Types VS116B, VS3PN116B and VS3PN136B are available off-the-shelf from distributor stock.

Designed to meet OSHA requirements. Portable 120 volt, single-phase units have grounded NEMA cord-plug assembly, on-off switch, grounded output receptacle, pilot light and fuse. Panel controls are recessed for protection from accidental bumping. Slots at rear for wall hanger brackets. Type L10B rated 0-132 volts, 1.75 amp; type L21 rated 0-140 volts, 4.5 amp; type L116B rated 0-140 volts, 10 amp. All available off-the-shelf from distributor stock.

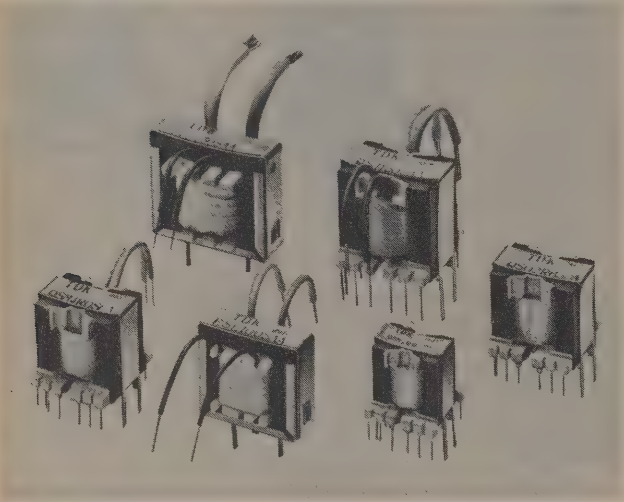
TDK

TRANSFORMERS

POWER TRANSFORMERS



TDK power transformers utilize high performance ferrite cores originally perfected for high reliability switching power supplies. They are designed to operate at a switching frequency of 50 kHz.

FEATURES

1. Conform to UL standards.
2. Compact.
3. Highly efficient.
4. TDK high performance ferrite cores used.

APPLICATIONS

Used in power supplies for circuits incorporating microprocessors and microcomputers such as: calculators, microcomputers, peripherals, games facsimile and copying machines, audio and video equipment, industrial controls and robotics.

Specifications

Input voltage	140 Vdc ±20 V
Switching frequency	50 kHz
Duty	40% max. (max. pulse width; 8 μs)
Circuit type	Single forward converter
Output voltage	Refer to Table
Output current	Refer to Table
Operating temperature range	−10° to 55°C
Insulation class	A type (105°C)
Withstand voltage	2 kV.a.c., 1 mA, 1 minute
Insulation resistance	500 V.d.c., 500 MΩ
Temperature rise	45°C, max.

(Test method conforms to MIL-STD-2025.)

TECHNIPOWER® A Penril COMPANY

VARIAC® VARIABLE AUTOTRANSFORMERS

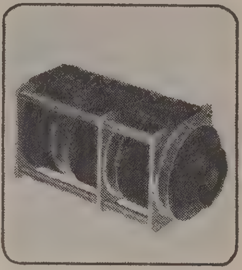
The Industry's Standard for Quality, Performance Reliability and Efficiency. Available in 700 models with more than 1000 possible custom variations to individual "spec." Durable, cool running and overloadable to 1000% short term, they generate output from 0 to line or above line voltages independent of load size or power factors. In single and three phase models, manual and motor driven, with 120, 208, 240 and 480 V outputs plus many current ranges. A special group of militarized "400 Hz" units featuring excellent regulation are included.

SINGLE PHASE VARIAC® AUTOTRANSFORMERS

In 120, 240, 480 V inputs, 50/60 Hz, many with UL and CSA listings and from 2.0-300.0 Amps. Choose from fully enclosed or open designs, in single phase or three phase configurations, 50/60 Hz and 400 Hz models. Connectable in parallel or series and single line.

MANUAL 3-PHASE GANGED VARIAC® AUTOTRANSFORMERS

Control 3-phase power requiring 208, 240 or 480 V inputs. These Variacs come in 208, 240 and 50/60 Hz ratings and in 7.1, 8.5 and 10 Amps. 29 other units permit overvoltage use on an open Delta connection. 14 other models are Y connected. Ball bearings are also included.



MILITARIZED "400 Hz" VARIAC® AUTOTRANSFORMERS

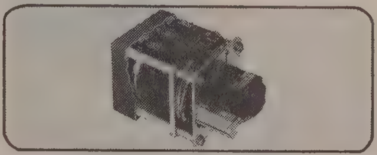
For ruggedized use from 350 to 1200 Hz. With excellent regulation, smaller and lighter than 60 Hz units, they conform to most mil-specs for harsh environments. Single Phase and 3-Phase configurations.

PORTABLE VARIAC® AUTOTRANSFORMERS

Metered, encased and available in 20 models featuring an autotransformer and overload protection. Some have Voltmeters, Ammeters, and Wattmeters. 120 V and 240 V models to 18.0A; 2 and 3 wire versions also offered.

MOTOR DRIVEN VARIAC® AUTOTRANSFORMERS

More than 60 motor driven models, single or ganged. Motors are fully enclosed, 2 phase, gear-reduction, servo types with motor speeds of 2, 4, 8, 16, 32, 64 and 128 secs at 60 Hz. All have ball bearings and adjustable limit switches.



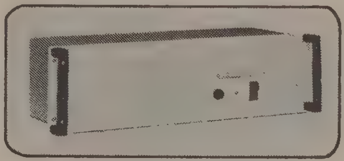
TECHNIPOWER® A Penril COMPANY

VARIAC® AUTOMATIC VOLTAGE REGULATORS

Control Industrial Loads, Encourage Peak Performance While You Protect Sensitive Equipment e.g. computers. Variac Voltage Regulators offer smooth voltage control, have fast response and function up to 10 times the rating for transient surges without power factor restrictions. Particularly suitable to offset brown-out effects and do not introduce distortion or noise. Offered in 5 basic models with over 100 custom variation possibilities.

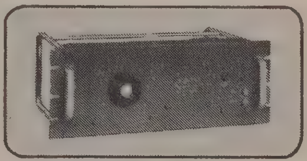
TYPE 1591

Compact 1 kVA with 115 V ratings. Low cost, small and available in portable and rack mounted models.



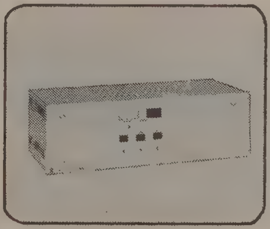
TYPE 1571

Militarized, in 4 models, for use where shock or vibration is encountered. Available in 400 Hz or 50/60 Hz with 115 V outputs, rack mountable. 5.8 kVA.



TYPE 1592

Provides proper voltage for long term operation — remotely programmable. In 2 models, capacity to 5.3 kVA, handle 120-480 V and are used in single and three-phase applications.



TYPES 1581 and 1582

High capacity. Automatically compensate for line voltage fluctuations. 115 V and 230 V models, 19.7 kVA capacities. For industrial and lab use e.g. computers, transmitters and critical processes.

DEFLECTION YOKE

THORDARSON

THORDARSON CRT Display Products utilize advance design and construction techniques which meet or exceed all applicable standards. Development and production capabilities located in Mt. Carmel and Robinson, Illinois, are devoted primarily to producing custom requirements as well as standard flybacks and yokes for CRT Display and related applications

We invite you to send us your specifications for deflection yokes and/or high voltage transformers (flybacks). We'll send you a professionally designed prototype. Our engineering staff wants to work with you to design transformers for your special projects.

20mm 90° Yoke With Adjustable Magnets (monochrome)

Applications for this yoke and the 29mm 110°·

- CAD/CAM Display Terminals
- Data Display Terminals
- Video Monitors
- Military Defense Terminals
- Instruments With CRT Displays
- Specific Custom Applications

29mm 110° Yoke With Adjustable Magnets (monochrome)

Features for this yoke and the 20mm 90°·

- Adjustable Magnets Are Standard For Geometric Corrections
- Adapts to Any Size CRT
- High Resolution And Excellent Focus
- Frequency Up To 64 kHz
- Built to Customer Specifications
- Excellent Performance and Reliability
- Available With or Without Lead Wire
- Produced and Serviced in U.S.A.

DEFLECTION YOKES AND HIGH VOLTAGE TRANSFORMERS (FLYBACK)

THORDARSON

37mm 90° Color Yokes

Applications:
- CAD/CAM Display Terminals
- Data Display Terminals
- Military Defense Terminals
- Video Monitors
- Instruments With CRT Displays
- Special Custom Applications

Features:
- Adapts to Any Size CRT
- Good Convergence and Color Purity
- Built To Customer Specifications
- Excellent Performance and Reliability
- Produced and Serviced in U.S.A.

Fully Integrated Sweep, Horizontal Output Transformers

Features:
- Epoxy or Silicon Encapsulated
- Frequency Up To 32 kHz
- Retrace Time As Low As 5.5μ secs.
- Footprint Styles – Delta, Rectangular, Custom, "T" Print see pg. 20.
- Built to Customer Specification
- Excellent Performance and Reliability
- Produced and Serviced in U.S.A.

HIGH VOLTAGE TRANSFORMERS (FLYBACK)

THORDARSON

Standard Sweep, Horizontal Output Transformers

Features:
- Epoxy or Silicon Encapsulated
- Frequency Up to 32 kHz
- Retrace Time down to 5.5μ sec.
- Footprint Styles – Delta, Rectangular, Custom, "T" Print
- Built to Customer Specification
- Excellent Performance and Reliability
- Produced and Serviced in U.S.A.

If your footprint requirements do not match our standards, contact us with your specific specifications. We custom design to fit your project.

We invite you to send us your specifications for high voltage transformers (flybacks) and/or deflection yokes. We will send you a professionally designed prototype. Our engineering staff wants to work with you to design transformers for your special projects.

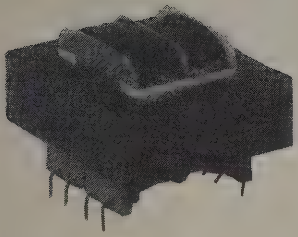
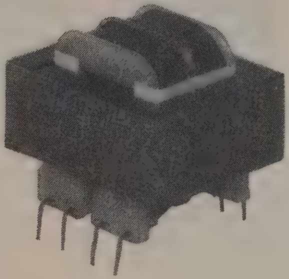
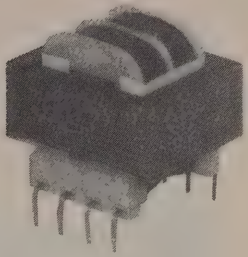
MINI-ISO-MITES

THORDARSON

Low-Voltage Printed Circuit Plug-In Power Transformers



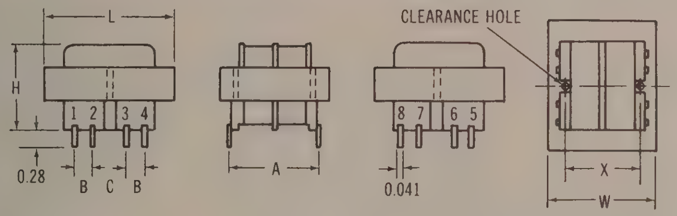




The MINI-ISO-MITES are low voltage, plug-in, power transformers added to THORDARSON'S printed circuit line. The Mini-Iso-Mite series are designed for ANY low voltage power supply application where tight space restrictions are a consideration. The single 115V or the dual 115/230V primaries and secondaries are wound non-concentrically meaning, side by side. This construction results in smaller units and eliminates the need for costly electro-static shielding.

The Mini-Iso-Mites are highly isolated units with 2500 HIPOT standard and are built to MIL-T-27 specifications.

The power ratings are: 2.4VA, 6VA, 12VA, 20VA, and 36VA. The tallest of the series is 1⁹⁄₁₆ inches and the smallest is 1³⁄₁₆ inches.



VA Size	H	L	W	X	A	B	C	Wt.

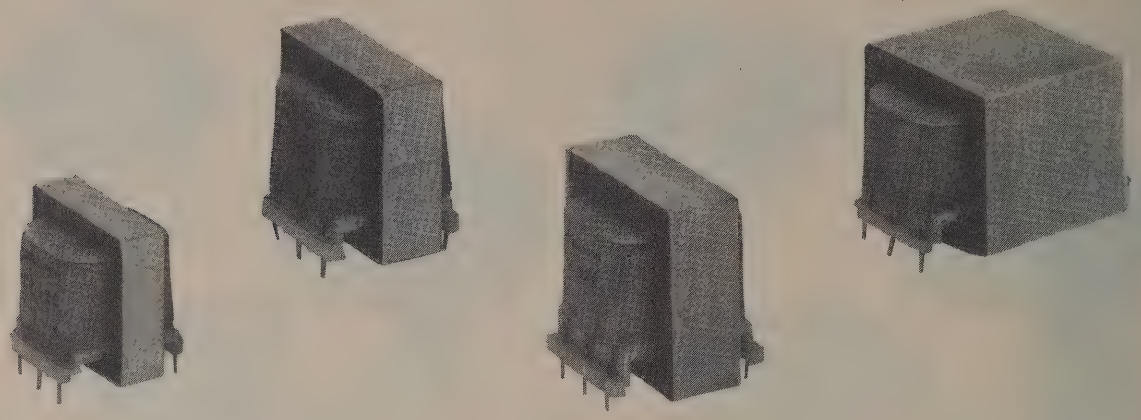
MINIATURE TRANSFORMERS

THORDARSON

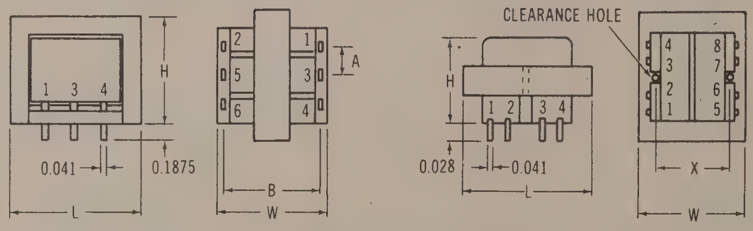
Printed Circuit Plug-In Power Miniature Transformers



Thordarson's new step down PCP transformer series is utilized in miniaturized equipment. 1.2, 4.4, 10, and 24 VA sizes are available.

All THORDARSON transformers are thoroughly impregnated and built to MIL-T-27 specifications to insure quality products.

The six and eight plug-in terminal pins are precisely placed with consistency for ease in mounting. The smallest of the PCP series is 3 oz., with a height of 1$^{3}/_{16}$ inches. The largest unit weighs 12 oz., and is 1$^{3}/_{8}$ inches in height. Additional statistical information is contained in the charts.



VA Size	W	L	H	A	B	Oz.
1.2	1.125	1.375	1.125	0.312	1.000	3
4.4	1.226	1.625	1.312	0.400	1.100	5

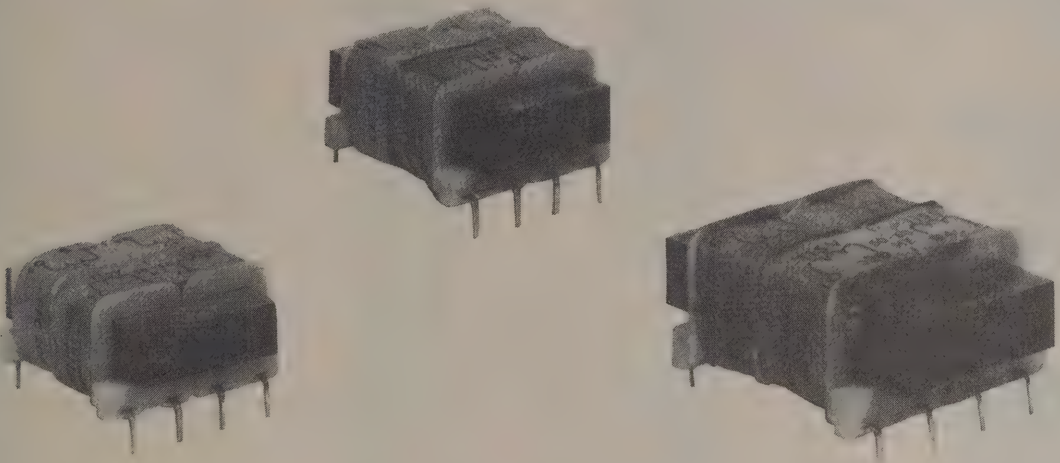
FLAT COMPACT TRANSFORMERS

THORDARSON

FLAT COMPACT Printed Circuit Power Transformers



Sleek design: The 6VA FLAT COMPACT permits 1 inch card spacing and is 0.850 inches high. The 12VA model permits 1¼ inch card spacing and is 1.065 inches high.

The electro-static shield has been removed. Why? It incorporates non-concentric windings which means the secondary is located next to the primary instead of being wound directly over it. The high isolation has diminished the capacitance between windings.

1500 V RMS HIPOT: High isolation is a standard feature.

The FLAT COMPACT Transformer was created for use in ANY low voltage application where space is critical. For single or dual output DC supplies and isolated control circuits and reference supplies, use the FLAT COMPACT.

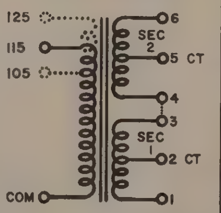
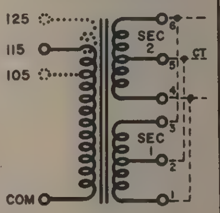
SERIES HOOKUP



PARALLEL HOOKUP



TODD SYSTEMS "HIGH CURRENT TRANSFORMERS & CHOKES" are designed for use in high power rectifier circuits, and high current A.C. applications. "TODD ENGINEERED" designs feature a nominal temperature rise of 45°C., at full load, thus providing outstanding overload capacity. All designs utilize extremely low regulation, varying from 10% in the smallest to 1% in the larger units. Four styles . . . select the type best suited for your lab, test rigs, OEM or production equipment

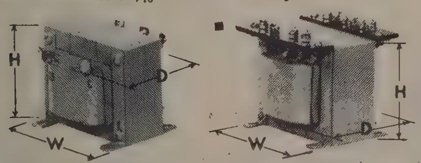
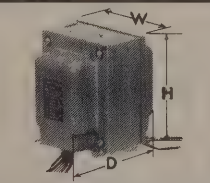
Add ³⁄₁₆ to H W D for Style BE

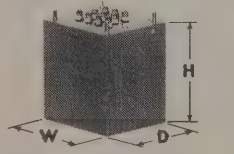


STYLE B:
- "Open Frame" Bracket Mounted
- Double Vacuum Varnish Impregnated

STYLE BE:
- Conforms to MIL-T-27B
- Epoxy Encapsulation added to Style B



STYLE V:
- Fully Enclosed in Metal Shells
- Ease of "Wiring with Leads"
- Attractive Appearance
- Dbl Vacuum Varnish Impregnated



STYLE CM:
- Hermetically Sealed to MIL-T-27B
- Environment Proof
- Attractive Gray Finish
- Permanent Name Plate

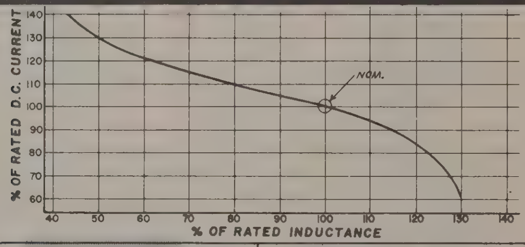
HIGH CURRENT CHOKES

50/500 HERTZ

DIMENSIONS REFER TO HIGH CURRENT XFMR SKETCHES



- **Matching styles complement high current transformers**
- **Wide variety of compatible current ratings**

INDUCTANCE VARIATION

Graph indicates typical variation of inductance (%) when used at D.C. currents (%) other than the rated values.

Chokes operated at D. C. currents higher than rated value must be run on an intermittent basis to avoid overheating.

50/60 Hz TOROIDAL POWER TRANSFORMERS CUSTOM MADE OR STANDARD

LOW WEIGHT	Typically less than half the weight of stacked core transformers.
SMALL DIMENSIONS	Low height allows slim compact design of electronic equipment.
EASY MOUNTING	Washer mounting requires only one single bolt to the chassis.
LOW HUM	Continuously rolled core has no airgap. No loose parts to rattle.
LOW STRAYFIELD	Primary and secondary windings are distributed evenly along the core, which has no airgap.
SMALL NO-LOAD LOSSES	Typically less than ¼ of the no-load losses of ordinary stacked core transformers.
MEETS ALL SAFETY REQUIREMENTS	TOROID transformers are made to meet all major safety regulations such as US (UL 1411), Scandinavian (SEMKO 115, etc.), West German (VDE 550) and Swiss (SEV). 4000V RMS insulation is standard.
CUSTOM DESIGN	Our application engineers will help you to select the best transformer for your application, and will also custom design a rectifier transformer from DC data. Prototypes can be delivered 2 to 3 weeks after order.

Complete Data and Application Notes available on request.

GENERAL INFORMATION

Both standard and custom made transformers are made on standard core sizes (see table on left). Non-standard core sizes can be made for large volume users to meet special size requirements. Cores are tape-wound from grain-oriented silicon steel and heat-treated for optimum performance.

Both ends of windings are normally taken out as 8″ leads with colored PVC tube insulation. Taps can be formed by external interconnection of leads.

Temperature rise.

TOROID transformers are normally designed for a temperature rise of 60-70°C (140-158°F). The steady-state temperature in a transformer depends on the mounting environment.

Inrush current.

Due to absence of air gap and good magnetic properties of the core material, the inrush current at power-on is higher than in stacked core transformers. Slow fuses should be chosen for primary circuit protection, especially for transformers over 300 VA.

Static shielding.

A static shield to minimize capacitive coupling between primary and secondary is available as an option. The shield occupies space and thus reduces the effective output power of the transformer.

Magnetic strayfield.

The strayfield from a well made toroidal power transformer is very insignificant compared to the strayfield from a conventional stacked-core transformer. The small residual strayfield from a TOROID transformer can, if required, be further reduced by means of a thin ring of magnetic material fitted as a belt around the toroid.

3-phase transformers.

A 3-phase toroidal transformer consists of three separate units that can be mounted individually or stacked upon each other, depending on available space.

TRANSFORMERS

SUBMINIATURE AUDIO TRANSFORMERS

LT & LS SERIES
LU SERIES

The LS Series is electrically and mechanically the same as the LT Series except for phase relationships between terminals.

LS, LT, and LU Series transformers have successfully passed the rigid requirements of MIL-T-27, Class S, Grade 5.

Subminiature in size, weighing less than 0.1 ounce, these transformers have tenth inch grid spacing between terminals and are ideally suited for transistor circuit applications which utilize printed circuit board design. All three series have risers on mountng surfaces to facilitate inspection and board cleaning and also to prevent moisture traps.

A wide range of standard designs are available which meet the requirements of most common applications and allow for rapid delivery of prototype quantities. Special designs are also available in all three types.

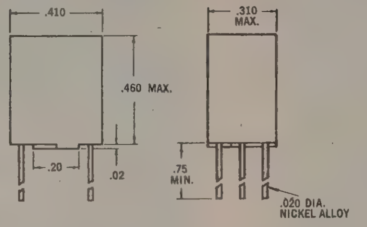
The new LU Series exhibits the same electrical characteristics as the LS and LT Series but has been packaged in a "thin line" configuration to allow for closer board spacing for "card cage" applications or where height dimensions are critical.

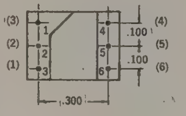
MAGNETIC SHIELDING

LS, LT and LU Series transformers are available with magnetic shields.

To order transformers with shields installed, add 500 to dash numbers shown in the table below. For example: to order an LS-22 with shield, specify LS-522.

LS/LT SERIES

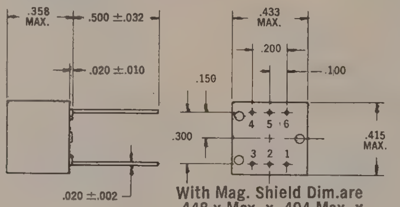




WT. 0.1oz

With Mag. Shield Dimensions are .365 Max. x .465 Max. x .531 Max.

LU SERIES



With Mag. Shield Dim.are .448 x Max. x .494 Max. x .400 Max.

TRANSFORMERS

SUBMINIATURE AUDIO TRANSFORMERS

Torotel LA and LB series transformers are manufacturered to MIL-T-27, Grade 5, Class S specification. These series have 0.1 grid spaced terminals for printed circuit application. Both types have risers on mounting surfaces to prevent the formation of moisture traps and to facilitate cleaning of board assemblies.

The LA Series is electrically the same as the LB Series, but is packaged in a .460 inch cube with smaller outline dimensions for application where this configuration is more suitable.

Leads are made of 20 AWG tinned copper. Units utilizing Dumet wire are available on special request.

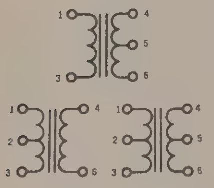
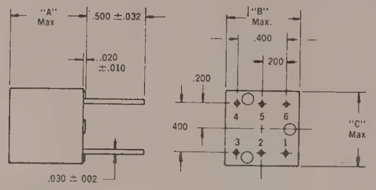
TRANSFORMERS

AUDIO TRANSFORMERS

LL & LR SERIES



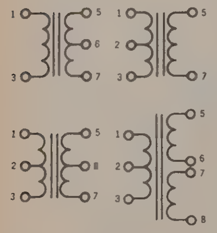


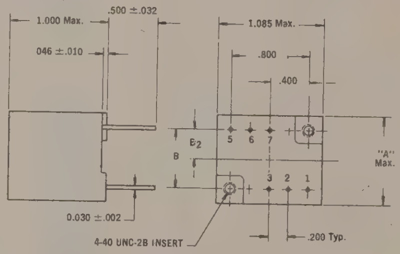
Series	A	B	C
LL	.600	.590	.590
LR	.925	.800	.710

These tiny, versatile "LL" transformers are provided with .020 risers and 0.1 grid spacing for printed circuit board applications and are manufactured to MIL-T-27, Grade 5, Class S specifications.
Response: ±1 db 200 to 50,000 Hz
Distortion: 10% max. at rated power, 200 to 50,000 Hz
Weight: 0.4 oz.

These miniaturized "LR" transformers are manufactured to MIL-T-27, Grade 5, Class S specifications and are ideally suited for a wide range of printed circuit applications.
Response: ±1 db 200 to 20,000 Hz
Distortion: 10% max. at rated power, 200 to 20,000 Hz
Weight: 1.0 oz.

LW & LY SERIES



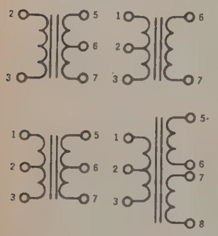


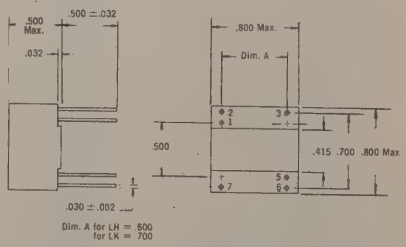
Series	A	B	B_2
LW	.900	.600	.300
LY	1.125	.800	.400

"LW" Series transformers are manufactured to MIL-T-27, Grade 5, Class S specifications. Riser areas and 0.1 grid spacing make these units ideal for printed circuit board applications.
Response: ±1 db 100 to 10,000 Hz
Distortion: 1.5% max. at 60 mW, 200 to 10,000 Hz
Weight: 2.0 oz.

"LY" Series transformers are highly compact, efficient units with power output ratings to 7.5 watts. These transformers are manufactured to MIL-T-27, Grade 5, Class S specifications.
Response: ±1 db 60 to 10,000 Hz
Distortion: 1% max. at 250 mW, 200 to 10,000 Hz — 10% max. at rated power, 200 to 10,000 Hz
Weight: 2.5 oz.

LH & LK SERIES





Series	A
LK	.700
LH	.600

"LH & LK" Series transformers are the ultimate in compactness. Designed to meet MIL-T-27, Grade 5, Class S.
Response: ±1 db 200 to 10,000 Hz
Distortion: 10% max. at rated power, 200 to 10,000 Hz
Weight: .75 oz.

TRANSFORMERS

400 Hz MINIATURE POWER TRANSFORMERS

Reference for all Industrial and Military Standard 400 Hz Miniature Power Transformers

These 400 Hz Miniature Power Transformers are selected for use in all Military and Industrial applications requiring high performance in the smallest possible package size. They conform to all of the requirements of MIL-T-27, Class S (−55°C to +130°C). The minimum continuous operating life expectancy is 10,000 hours. This series is available having power ratings of 0.5 VA through 25 VA. The primaries are 115 Vrms with secondary voltages ranging from 5 Vrms through 300 Vrms.

It is recommended that these transformers be specified for all applications where space, weight, and cost effectiveness are prime considerations.

TRANSFORMERS

400 Hz MINIATURE POWER TRANSFORMERS

Reference for all Industrial and Military Standard 400 Hz Miniature Power Transformers

PHYSICAL SPECIFICATIONS

Size: Sizes for Standard VA Types are given in Table I, and Outline Drawings.

Construction: MIL-T-27, Grade 5; Black Epoxy Encapsulated.

Terminals: Printed circuit pins — tinned brass.

Terminal Strength (Method 211 of MIL-STD-202, Test Condition A): 2.0 pounds.

Marking: Includes MIL-T-27 Type Designation, winding ratings, maximum working voltage, schematc, Torotel name, and part number.

ENVIRONMENTAL SPECIFICATIONS

Operating Temperature Range: −55°C to +130°C (ambient plus temperature rise).

Altitude: 70,000 feet, maximum.

Vibration: MIL-STD-202, Method 204, Test Condition D.

Life Expectancy: 10,000 hours minimum.

Other Environmental Specifications: In accordance with MIL-T-27, Grade 5· Class S, Family 03.

ELECTRICAL SPECIFICATIONS

Primary Voltage: 115 volts rms ±10%.

Frequency: 400 Hz ±5%.

Secondary Voltage: See Table II.

Secondary Voltage Tolerance: ±3% at full load and 115 volts, 400 Hz applied to primary.

Electrostatic Shielding (Schematics S and Y): 5 to 1 minimum voltage ratio at 20 KHz.

Phase Shift: 1.0 electrical degree between primary and secondary voltage at rated load, maximum.

Insulation Resistance: 10,000 megohms minimum at 500 VDC.

Dielectric Strength: At sea level—2.8 times the maximum working voltage. At reduced barometric pressure—1.25 times the maximum working voltage.

Mech. Tol. = ±.005 unless indicated.

TRANSFORMERS

PC MOUNT POWER TRANSFORMERS

Torotel standard PC mount transformers are designed for 115 Vrms 60 Hz input and are generally usable to above 400 Hz. Voltages listed in table are standard values but transformers can be furnished with other voltage and current ratings. Transformers are available with Channel Frame mounting, either tab style, (Type C) twist prong (Type B) or without Frame (Style A).

Also custom designed power transformers and audio transformers are available in these and other types and sizes upon special request.

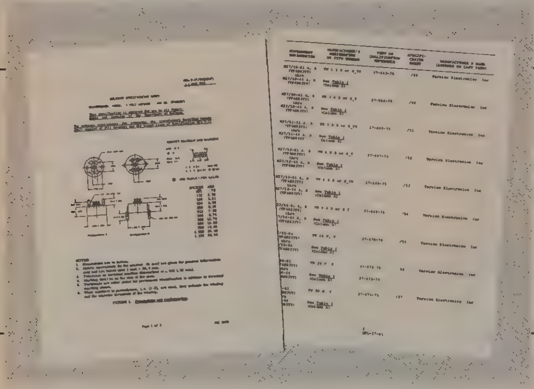
TORWICO ELECTRONICS INC. LEADER IN MAGNETIC COMPONENTS

TINYMAX® Transformers have QPL Status on Qualified Product List 27.



Now you can specify Military Standard Transformers without the need for Qualification Testing or requests for non-standard parts approval.

MIL-STD
TINYMAX
TRANSFORMERS
TORWICO

These miniature transformers are of toroidal construction and offer a size and weight reduction when compared to conventional laminated and "C" core designs. Yet, the prices on these custom engineered transformers are competitive with off-the-shelf stock items.

So, when you need a 115V, 400 Hz transformer having a specific secondary voltage don't settle for an off-the-shelf item that may only approximate your requirement. Torwico has over 2,000 MIL/STD units and an almost infinite selection of STD TINYMAX.

What's more, Torwico offers fast delivery and competitive pricing. Selection, delivery and price--Torwico has it all.

STD TINYMAX -- MIL-T-27, Grade 4 and Grade 5, Class S, 115 volt, 400 Hz transformers available in power ratings ranging from 1.5 VA through 250 VA, with an almost infinite combination of secondary voltages of 6V through 300V.

MIL-STD TINYMAX -- Grade 4 and Grade 5, Class S, 115 Volt, 400 Hz transformers. Reference M27/37 through M27/66. Over 2,000 choices of secondary voltages.

EXTENSION OF APPROVAL -- Any design selected directly from, or based, on our MIL/STD TINYMAX transformer may be qualified to MIL-T-27 by similarity.

PROCUREMENT NOTE -- Catalog information and cross referenced sheets may be obtained from the factory or for MIL-STD units, refer directly to specification sheets M27/37 through M27/66.

PROTOTYPE DELIVERIES -- A large assortment of TINYMAX transformers is always maintained in stock for immediate delivery. Others can be shipped within 10 days.

For a copy of Torwico's MIL-STD TINYMAX catalog, contact your local Torwico representative. He'll show you why Torwico is the easy way to deal with military standards.

PRECISION TOROIDAL TRANSFORMERS — SCOTT "T" TRANSFORMERS

Trans American Transformer provides custom signal transformers with high accuracies over the full military temperature/environmental range. Our speciality is High Performance and Consistency in the smallest size. Your design or our design to your specifications.

These transformers are fully encapsulated P-C mount toroidal/laminated units. They are manufactured in accordance with Mil-T27D Grades 4 and 5. They have high input impedance and low output impedance combined with high transformation accuracy and minimum quadrature. These characteristics make these units particularly useful in solid state synchro to digital and digital to synchro converter applications.

Send for catalog T-101A

HIGH FREQUENCY SWITCHING POWER SUPPLY MAGNETICS

Switching power supply magnetics designed and manufactured to meet all high reliability military requirements. Typical circuit designs include push pull, forward converter and flyback. Power requirements from milliwatts to approximately 1 kilowatt. Units available in Grade 4, 5, 6 and temperature Class S through U.

Send for catalog T-202A

POWER TRANSFORMERS 60-400 Hz

Designed and built to meet the specifications of Mil-T-27D, high reliability and long life are major features of these units. All designs available in Grades 4, 5, 6 and temperature Class S through U. Low profile and PC mount toroidal and laminated units provide the absolute smallest size/volume for any system requirement.

RATIO TRANSFORMER

QUALITY — RELIABILITY

Trans American Transformer engineers will custom design all magnetics to meet any high reliability requirement.

Qualification Testing — Environmental Testing
Mil-T-27D/Mil-STD-202/Mil-STD/810/
Mil-Q-9858/Mil-I-45208/Mil-C-45662

Quality is built-in and confirmed by testing.

THERMAL TOOLS

1. Wire stripper
2. Resistive tweezer
3. Conductive tweezer

Options: Temperature control/Multiple units/Temperature monitoring

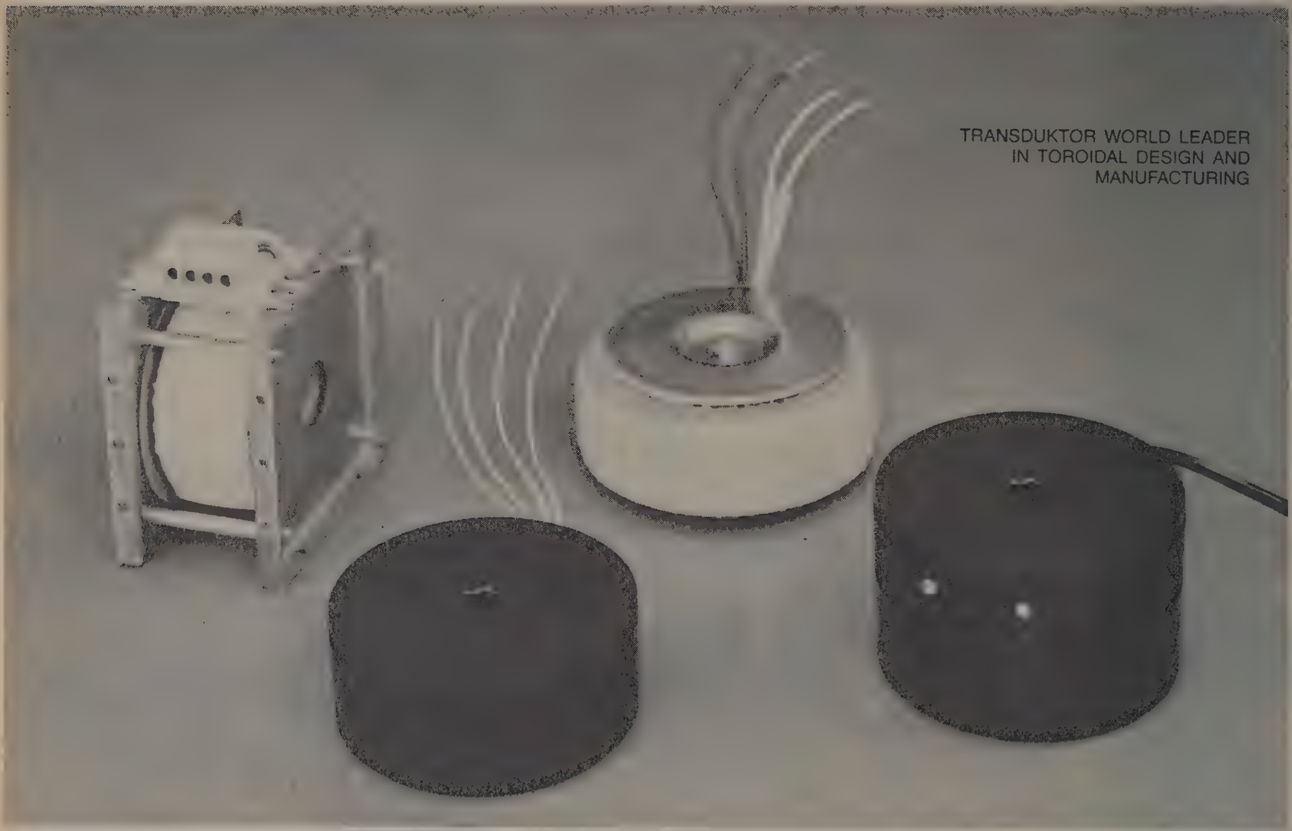
Transduktor

Toroidal Power Transformers



TRANSDUKTOR WORLD LEADER IN TOROIDAL DESIGN AND MANUFACTURING

Transduktor offers high quality Toroidal Power Transformers with the following features:

UL-RECOGNIZED
Transduktor Toroidal Power Transformers, custom made or standard, are UL-recognized and also approved by all major safety agencies such as VDE (West Germany), SEV (Switzerland), OEV (Austria), SEMKO (Scandinavia), etc. All Transduktor transformers are provided with 4000V RMS insulation as standard.

LOW WEIGHT
Typically 50% lighter than traditional stacked lamination transformers.

SMALL DIMENSIONS
Low height profile allows slim, compact design of electronic equipment.

FLEXIBLE DIMENSIONS
The Transduktor Toroidal Power Transformer can be "modeled" to fit very limited spaces and still conform to your electrical requirements.

EASY TO MOUNT
Just one center screw easily and quickly mounts the Transduktor Toroidal Power Transformer to the chassis.

LOW MAGNETIC STRAYFIELD
No air gap and the primary and secondary windings are evenly spread around the core, resulting in a very low radiated magnetic field.

LOW MECHANICAL HUM
A single continuous strip of steel tightly wound into a roll results in a very solid and stable unit. No loose parts to buzz.

SMALL NO LOAD LOSSES
Transduktor Toroidal Power Transformers can reduce open circuit power by 90% compared to traditional stacked lamination transformers.

TRANSDUKTOR INC./600 Steamboat Road, Greenwich, Connecticut 06830/Tel. (203) 661-5726/Telex 996491 SID

Transduktor

Toroidal Power Transformers

TRANSDUKTOR'S LINES OF TOROIDAL COMPONENTS

- 50/60 Hz power transformers
- Isolation transformers
- Step-up/Step down transformers
- Rectifier transformers
- Autotransformers
- 1-phase and 3-phase transformers
- 400 Hz transformers
- Current transformers
- DC and low frequency chokes
- Filter chokes for SMPS

STANDARD OFF-THE-SHELF TRANSFORMERS SERIES 5000

Primary voltage: 120V, 60 Hz

Primary to secondary insulation: 4000V RMS

Transduktor

Toroidal Power Transformers

CUSTOM DESIGNED TOROIDAL POWER TRANSFORMERS 50/60 Hz
SERIES AA

Transduktor has years of experience in designing and manufacturing toroidal power transformers. Our application engineers will assist you to select the best transformer for your application.

Our computers are programmed to immediately analyze your data and prepare custom designs. Samples can be delivered 2-3 weeks after order.

* Windings may be connected in series to obtain their combined voltage when properly phased. Current will be equal to the current of the lowest winding. Example: Two 6.3V windings @ 2A in series would be 12.6V @ 2A. Windings may also be connected in parallel to obtain combined current. Example: Two 6.3V windings @ 2A in parallel would be 6.3V @ 4A. ¶ Tapped primary 105-115-125. ‡ 60 cycle operation.

Split Bobbin Transformer

Triad-Utrad's new Split Pack split bobbin transformer increases the depth and versatility of Triad's already extensive line of PC board mounted transformers. Like Triad's recent Flat Pack series, the Split Pack transformers are nonconcentrically wound—with primary and secondaries wound side by side, unlike the secondary-on-top-of-primary windings of standard PC board transformers. Split bobbin winding and low capacitive coupling eliminate costly electrostatic shielding. The Split Pack's unique construction makes possible higher HiPot testing—2,500V rather than 1,500V.

Triad-Utrad's Flat Pack power transformer is designed to meet the needs of low clearance printed circuit board and solid state power designs. These new units can also be used for control and instrumentation applications. Voltages and currents were chosen for widely used power applications and could be used in single or dual output supplies. The Triad-Utrad Flat Pack has a unique construction feature allowing them to pass a 2000V HiPot test.

Dual Primaries = 115/230V, 50/60HZ

Split Bobbin = side by side windings reduce interwinding capacitance and eliminates the need for a static shield

Semi-Toroidal Construction reduces radiated magnetic fields and results in balanced windings

Hi-Pot = 2000V RMS is standard

Terminals are precision spaced

Selection Guide for TRW Transformers

STANDARD AUDIO TRANSFORMERS AND INDUCTORS

Product Series	Description	Frequency Range	Max. Power
Military Types: Grade 5, Metal Encased			
BIT-250	Ribbon style Kovar leads; compatible with transistor and IC flat pack styles. Transformers and inductors.	300 Hz to 250 kHz	80 mW @ 1 kHz
DO-T	Flexible 1½″ Dumet leads. Ultraminiature transformers and inductors for transistor circuitry.	300 Hz to 20 kHz	500 mW @ 1 kHz
DO-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor style circuitry.	300 Hz to 20 kHz	100 mW @ 1 kHz
DI-T	Flexible 1½″ Dumet leads. Ultraminiature transformers and inductors for transistor circuitry.	400 Hz to 100 kHz	500 mW @ 1 kHz
DI-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor circuitry.	400 Hz to 100 kHz	500 mW @ 1 kHz
TOP-1000	Plug-in, .50 D by .35 High	300 Hz to 75 kHz	.6 W @ 1 kHz
TOP-2000	Plug-in, .50 D by .5 High	150 Hz to 75 kHz	1 W @ 1 kHz
TOP-3000	Plug-in, .750 D by .52 High	50 Hz to 30 kHz	2 W @ 1 kHz
Military Types: Grade 4, Metal Encased			
H	**Transformers** — Full line of input, interstage and output types for transistor and tube use. Chopper type transformers. **Inductors** — Range from .4 mHys to 450 Hys.	30 Hz to 20 kHz	1 mW to 10 mW
FHA	Low profile audio unit, straight 1″ pin terminals for plug-in mounting.	300 Hz to 20 kHz	100 mW @ 300 Hz
W (Mil Std)	Qualified to Mil Stds. print No.'s M27/3-01A to M27/11-01A. Inputs, interstage and output types.	300 Hz to 10 kHz	2W @ 300 Hz
Military Types: Grade 5, Molded			
SSO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	300 Hz to 20 kHz	100 mW @ 300 Hz
SO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	200 Hz to 20 kHz	250 mW @ 200 Hz
MTC	Plug-in, MIL-T-27, transformers for telephone interconnect and hybrid action.	300 Hz to 4 kHz	10 mW
Industrial Types: Cased, Non-Hermetic			
I-DI-T	Industrial versions of standard DI-T types.	400 Hz to 100 kHz	500 mW
I-DO-T	Industrial versions of standard DO-T types.	300 Hz to 20 kHz	500 mW
O	Excellent quality compact audio transformers and inductors, full range of transistor and tube applications	300 Hz to 20 kHz	1 Watt
A	Ultra compact wideband transistor and tube type transformers and inductors, hybrids and choppers.	10 kHz 50 kHz	5 Watt
LS	Linear standard transformers. Hi-fidelity, highest quality. Tube and transistor types. Includes low dist. high efficiency, shielded types, hybrid transformers. Broadcast quality.	7 Hz to 50 kHz	Low level to 50W
Industrial Types: Open Frame, Non-Hermetic			
SSO	Flexible lead type transformers and inductors for tube and transistor application. Channel frame available.	300 Hz to 20 kHz	100 mW
SO	Small, broadband type, flexible lead type. Transistor and tube types. Channel frame available.	200 Hz to 20 kHz	250 mW
PC	Plug-in types for mounting on PC boards. Same electrical characteristics as standard ouncer, sub-ouncer and sub-sub-ouncer lines.	100 Hz to 20 kHz 200 Hz to 20 kHz 300 Hz to 20 kHz	1W 250 mW 100 mW
TC	Plug-in and lead type transformers and inductors for telephone interconnect	100 Hz to 10 kHz	1 mW to 10 mW

IN ADDITION TO THE NEEDS met by TRW stock audio and power components listed on this page, there are many unique applications that can be met with special units.

Our catalog audio line, for example, represents close to 500 commercial and MIL grade components covering a frequency band from 5 Hz to 250 kHz, at levels of mWs to 250 W and ranging in weight from 1/20 oz. to 16 lb. Our custom designs — which often can be MIL qualified by similarity — cover an even broader range of frequencies and power ratings.

Custom power designs range from milliwatts to 100 kVA capacity. They comprise temperature ranges from Class R (105°C) to Class U (higher than 170°C.) All types of mechanical and electrical configurations are available, and special engineering emphasis is placed on individual requirements.

STANDARD POWER TRANSFORMERS AND INDUCTORS

Product Series	Description	Frequency	Power Range
Military Types			
DO-T400	Flexible lead ultraminiature power transformer. Hermetically sealed to MIL-T-27D Grade 5, Metal Clad.	380 Hz to 2400 Hz	400 mW
FP	MIL-T-27, Grade 5, low profile power transformers. 115V pri; secs deliver 2 to 30V.	400 Hz	10W to 30W
LL	MIL-T-27 Inductors Grade 5. Axially leaded units. .365 D x .49 L.	.25 Amps to 3 Amps	30 µHys to 5000 µHys
H	Inductors. Hermetically sealed inductor to MIL-T-27D Grades 4 & 5.	.017A to 30A*	0.4 mHy to 450 Hys†
H	Hermetically sealed to MIL-T-27D. Grades 4 & 5. Transistor, filament, inverter and plate type. Metal clad & molded.	50 Hz to 2500 Hz	1.2 VA to 5.0 KVA
HIT	Ultra-shielded power line isolation transformers. Hermetically sealed to MIL-T-27D. Grade 4. 0.1 mfd or less, effective coupling.	50 Hz to 400 Hz	50W to 1200W
MET	Hermetically sealed metal clad to MIL-T-27D Grade 4. For 400 Hz application to give min. size. Transistor, filament, universal types.	380 Hz to 2400 Hz	1.4W to 240W
N	Mil. St'd. filament & plate transformers per MIL-T-27D. Grade 4 (ruggedized) construction.	50 Hz to 400 Hz	7.5W to 125W
NV	Inverter transformer, miniature. Hermetically sealed to MIL-27D, Grade 4, Class V. Multiple outputs.	10 kHz, 20 kHz, 50 kHz	32.5 VA to 89 VA
PH/PV	MIL-T-27 3-phase transformers; Grades 4 & 5. Electrostatically shielded isolation and multi-output transformers.	50/60 Hz	25W-360W
SRA	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 15A	8 µHys to 1250 µHys†
SRB	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 15A	20 µHys to 3000 µHys†
SRC	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 13.6A	60 µHys to 10,000 µHys†
SRD	High current, molded inductors.	Up to 100 kHz up to 13A	500 µHys to 5.6 Hys
TPC	Plug-in power transformers, MIL-T-27D Grade 5, Class S, low voltage, high current.	50/60 Hz	1.7 VA to 12 VA
Industrial Types			
CG	High quality. Plate Transformers. Designed to AIEE. Rugged drawn steel cases. Vacuum impregnated & compound filled.	50/60 Hz	100 VA to 4950 VA
FT	Channel frame, filament/transistor transformers. For 2.5 VCT to 48 VCT. From .04A to 10A.	50/60 Hz	7.5 VA to 48 VA
PF	For photoflash and similar applications. Line and transistor inputs. Power, inverter & trigger types.	Trigger DC Inverter 4½ VDC 50/60 Hz	6 KV pulse to 15 KV pulse 40 Watt-Sec
R	(Inductors). Replacement types, channel frame construction. Vacuum sealed to prevent corrosion.	30 mA to 5A	2 mHys to 5 Hys†
R	Replacement type line isolation transformers. High reliability. Vacuum sealed to prevent corrosion. Housed in protective shells.	50/60 Hz	50 VA to 2500 VA

DO-T® Transistor Transformers and Inductors

AUDIO

PACKAGING

Hermetically sealed. A TRW Inductive Products pioneered structure. The bobbin is completely rigid eliminating stress and wire movement. The turns are circular in shape rather than square, eliminating turn corner stress and effecting uniform wire lay. No tapes are employed in connecting coil wire and external leads. They are rigidly anchored in secure terminal board fashion providing strain relief.

The leads used on the stock DO-T transformers are insulated solid .016 diameter Dumet leads. For plug-in type see page 9.

MIL SPECS To complete MIL-T-27D Specs. Units are fully ruggedized, hermetically sealed, **metal cased** to MIL Grade 5, Class R.

ALTITUDE 150,000 ft. max.

PERFORMANCE

The radically designed TRW DO-T Family (see pages 7-14) transistor transformers provide unprecedented power handling capacity and reliability, coupled with small size. Electrical parameters and areas of application exceed conventional transformer capabilities.

Curves on this page and on pages 10 & 11 indicate their performance compared to that of similar size units now on the market. These curves show representative performance of all DO-T's and DI-T's except 200,000 ohm units. Higher performance is obtained when used in push-pull with balanced DC. Other manufacturers' comparative performance is shown on these curves to put unjustified claims in perspective. For example, the TRW DO-T10 delivers 100 mW @ 5% distortion @ 300 Hz. **Identical measurements** were made on contemporary manufacturers' equivalent, rated at 50 mW @ 300 Hz. Actual delivered power was under **1 mW @ 7½% distortion @ 300 Hz.**

FREQUENCY RESPONSE ±3 db, 300 Hz to 20 kHz at 1 mw.

WORKING VOLTAGE 50 volts peak.

APPLICATION

Units can be used for different impedances from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve low frequency response and level ratings . . . higher source will reduce them. Units may be used reversed, input to secondary. The frequency response curve on this page is shown to 20 kHz. This descriptive curve is not meant to be restrictive. Units can be used at frequencies well above 20 kHz. Satisfactory applications for frequencies up to and above 250 kHz have been developed.

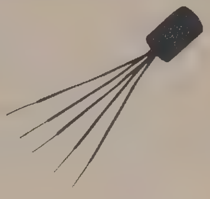
PULSE APPLICATION In pulse coupling impedance matching applications, (when measured with a 30 microsecond input pulse voltage wave), typical values for these transformers are: 5% or less droop, zero overshoot and less than 10% backswing.

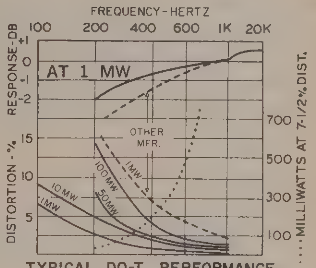
RELIABILITY The exceptional reliability of DO-T family units, inherent in their unique structure, has been dynamically proven in the field.

SHIELDING Hipermalloy electromagnetic shield available from stock for all DO-T family units. Order TRW P/N DOT-SH, or DIT-SH.

DILESIL HIGH TECHNOLOGY DO-T FAMILY TRANSFORMER

- A High Reliability version of the DO-T and DI-T line is available on special order. This alternate construction is designated DILESIL.
- DILESIL construction is intended for fine wire DO-T, DI-T transformers which are used in environments that produce prolonged thermal stress, far exceeding the thermal cycling specification requirements of MIL-T-27.
- DILESIL DO-T's have been approved and qualified by Defense Electronic Supply Command and appear on QPL-27 for MIL-T-27D.
- DILESIL construction is recommended for applications requiring extreme reliability under thermal stress. Thousands of these parts have been used in Hi-Rel Military and NASA applications for the past fifteen years.
- DILESIL DO-T and DI-T transformers are electrically identical to standard DO-T and DI-T parts. However, DILESIL parts are slightly larger than equivalent DO-T and DI-T parts.
- Contact the TRW engineering department for more detailed information.





TYPICAL DO-T PERFORMANCE

LOAD : RATED SEC. IMP.

SPECIALS

For indication of possibilities of DO-T Family units custom built to your special requirements, contact the TRW Inductive Products engineering department.

The stock DO-T Family are Grade 5, Class R units, for a maximum operating temperature of 105°C in accordance with MIL-T-27D Specs. On special order they can be designed to Class S requirements of MIL-T-27D (130°C maximum operating temperature). No additional life expectancy is gained by ordering Class S insulation systems for applications in the vicinity of Class R temperatures. Where the operating temperatures are above 105°C, the use of Class S insulations will afford greater life expectancy.

Special units with electrical modifications of changed lead lengths, modified impedance ratios, and additions of electrostatic shields, etc., are available for all DO-T Family units.

Stock units cover general purpose applications. For specific applications cost reductions may be effected.

INDUCTOR DO-T™ LISTING

Type No.	MIL Type		
DO-T50 (2 Wdgs)	TF5R20ZZ	Series connection: .075 Hy @ 10 ma DC, .06 Hy @ 30 ma DC, DCR 10.5 ohms Parallel connection: .018 Hy @ 20 ma DC, .015 Hy @ 60 ma DC, DCR 2.6 ohms	
DO-T28	TF5R20ZZ	.3 Hy @ 4 ma DC, .15 Hy @ 20 ma DC	DCR 25 ohms

For Power DO-T Transformers (DO-T400 Series) See Catalog page 34.

The BIT-250™ Line—An Advanced Development in Transformer Technology

TRW
AUDIO

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY

Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

Lead arrangements and terminations have been designed to maximum reliability under thermal shock and temperature cycling.

FLEXIBILITY

The stock units shown on facing page are designed to afford maximum flexibility of application.

Transformers are 7-terminal types, with center-tapped primaries and split secondaries. When connected in parallel, split-winding secondaries provide ¼ the impedance and twice the DC current capability as series connections.

Inductors in the stock line include both single-winding and split-winding types.

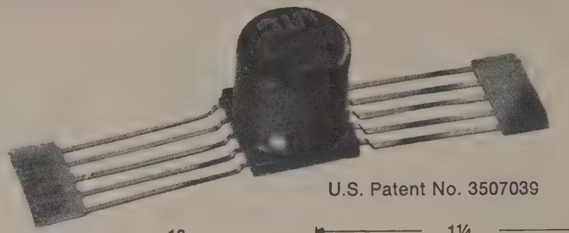
SPECIALS

BIT-250's not found in the stock line will be designed to customer's requirements.

- Special electrical parameters
- 10 or more leads
- Operation to 130°C per MIL Class S.

NOTES

- **FREQUENCY RESPONSE** ±2 db, 300 Hz — 250,000 Hz, @ 1 MW Ref. level.
- **DIELECTRIC STRENGTH** tested @ 200 V RMS.
- **MIL SPECS** To complete MIL-T-27D Specs. Metal encased, ruggedized, Grade 5, Class R.
- **SHIELDING** All units electromagnetically self-shielded.
- **LEAD MATERIAL** Tinned ribbon-style, solderable and weldable — MIL-STD-1276C.



U.S. Patent No. 3507039

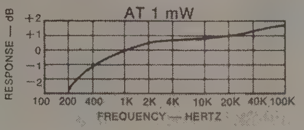
TYPICAL DI-T200 PERFORMANCE
SOURCE: RATED PRI. IMP. AND DC
LOAD : RATED SEC IMP.



PACKAGING Metal encased. DO-T family unit. See Catalog page 6.

MIL SPECS To complete MIL-T-27D Specs. Ruggedized, metal encased to MIL Grade 5, Class R.

FREQUENCY RESPONSE At 1 mW ±3 db, 300 Hz to 20 kHz, DO Type; ±3 db, 400 Hz to 100 kHz, DI Type.

TERMINALS Leads are .016 Dumet wire, tinned, and may be either welded or soldered. They are uninsulated and are spaced on a .1″ radius circle, conforming to the termination pattern of the "TO-76" cased semiconductors and micrologic elements.

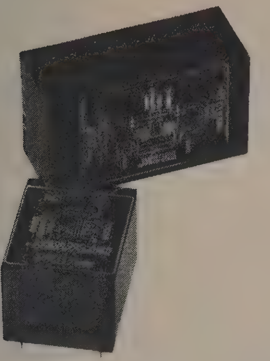
Telephone Interconnect Transformers

TRW

AUDIO

MTC Series



APPLICATIONS MTC (MIL-T-27D) transformers, designed for coupling applications feature unbalanced DC current ratings of up to 120 mA — higher than competitive units — while longitudinal balance per FCC 68.310 specification is greater than 60 dB.

The 2-wire to 4-wire hybrid transformer is noteworthy in that it can carry up to 100 mA unbalanced DC current through its primary, and has greater than 60 dB trans-hybrid loss over the 300-Hz to 4-kHz frequency band.

Dielectric strength exceeds 1500 volts AC.

MTC-1006	±.50 dB, 300 Hz-4 kHz	+10 dBm	60 dB min.	0.5%	—	11 dB min.*	60 dB min.

* Return loss figures are lowest readings over the frequency range as measured per MIL-STD-188C. For industrial use, return loss is greater than 22 dB. ‡ In 2-wire port.

TC Series

APPLICATIONS The TC Series of plug-in transformers is ideally suited for telephone interconnection applications. These low-profile units meet or exceed all modem and voice transmission impedance-matching requirements. They feature low distortion and wide frequency response, and are specially designed for wave soldering to printed circuit boards.

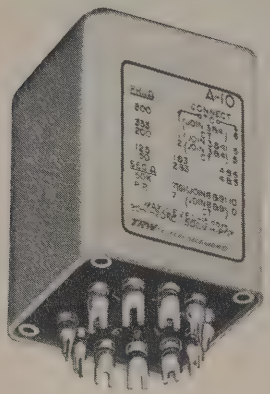
Compact™ Audio Transformers and Inductors

TRW

AUDIO

Ultra-Compact™ Audio



PACKAGING High quality rugged die cast zinc alloy case with both top and bottom mounting facilities. Asterisked items (see Type No.) have multiple alloy shield.

APPLICATIONS Compact commercial amplifiers and equipments.

APPLICATION NOTE Included in line are filament/transistor supply units.

FOR HERMETIC METAL CASED MIL TYPES See page 17.

NOTE All units except those carrying DC in primary employ a true humbucking coil structure, which provides electrical balance and effects good inductive shielding.

TYPE A CASE

1½″ x 1½″ x 2″ h
Unit Weight: ½ lb.
Mounting Holes 1 5/32″ sq.
Screws: 4-40
Cutout: 1⅜″ dia.

TYPES

SO—Open frame type with flexible leads.

PC-SO—Printed circuit board mounting open frame (new item).

SO-P—Hermetically sealed type to complete MIL-T-27D Specs, Grade 5, Class R.

NOTES

ON PERFORMANCE CHARACTERISTICS

- To present the widest range of application, matching impedance values are listed in order of increasing impedance value without regard to the traditional designation of primary or secondary winding.
- The primary and secondary winding can be used arbitrarily as the input or output.
- Impedance values written one above the other indicate a range of matching impedances over which the parts will give satisfactory performance as long as the impedance ratio is maintained.
- Impedance values separated by a slash indicate the series and parallel connected impedance value of the windings.
- PC-SO Types have terminal arrangements that permit the connection of series or parallel windings by bridging adjacent terminals (see Fig. 14). This eliminates unwanted cross overs on the PC board when split is available.

(E.T. is the maximum voltage, time product for a single pulse applied to the winding.)

TRW
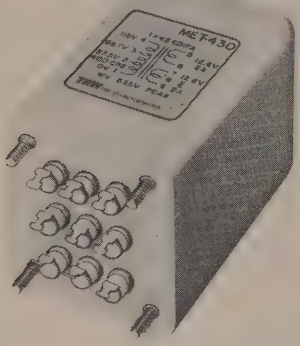
POWER

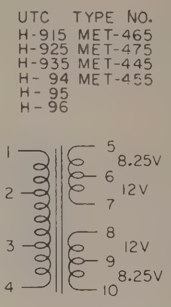


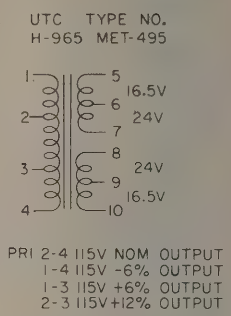
PACKAGING Hermetically sealed. Drawn metal case to MIL Grade 4.

MIL SPECS To complete MIL-T-27D Specs. MIL Type TF4S03 plus two letter case code. H-915 is qualified as M27/184-01. H-935 is qualified as M27/157-01. H-925 is qualified as M27/156-01.

NOTES: Chart below shows the secondary AC voltages available, and the approximate DC voltages resulting, in typical capacitive filter silicon rectifier circuits (at the indicated currents). Since the capacitor following the rectifier affects the DC, voltage values used (in 1000 mfd) are shown in parenthesis ( ) after each current rating.

Primary taps can modify nominal AC voltages by −6%, +6%, and +12%.





INCLUDING MET™ SERIES

Primary 115 Volts, 50/60 Hz Nominal Secondary Volts, 8.25 to 40.5

Type No.	MIL DC Range	Industrial DC Range	MIL Case
H-915	6V-.065A to 53V-.02A	**6V-.085A to 53V-.025A**	AH
H-925	6V-.22A to 53V-.07A	**6V-.28A to 53V-.085A**	AJ

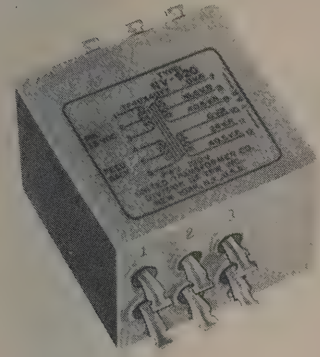
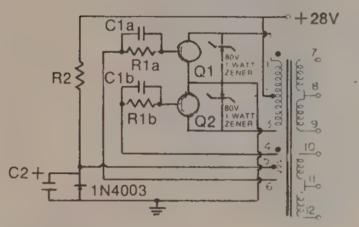
NV™ Series



CIRCUIT

CIRCUIT FOR NV UNITS



R1a, R1b = 10Ω 1 WATT, R2 = 15K= 1 WATT
S1a, C1b = 43pf, C2 = 50 µf 6V
Q1, Q2 = TRW 2N5326

- Hermetically sealed.
- Made to complete MIL-T-27D specs; Grade 4, Class V.
- High efficiency.
- Advanced winding coupling technique.
- Reduced spiking assures transistor reliability.
- Miniaturization due to the use of high efficiency core material.
- Ease of rectifier filtering at high operating frequencies.

DIMENSIONS

NV-520, NV-720: 1 3/16″ sq x 13/16″ high max.
NV-530, NV-730: 1 9/16″ sq x 13/16″ high max.
Approximate weights: 1.5 oz. and 2.5 oz.

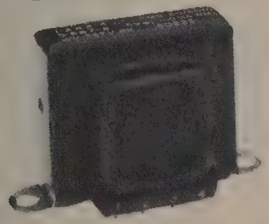
Plug-In IC Power Transformers TPC Series



APPLICATIONS The TPC Series of plug-in power transformers is ideally suited for low-voltage, high-current IC feed applications. These units are also recommended for use in full-wave centertap and full-wave bridge rectifier circuits.

MIL SPECS To complete MIL-T-27D Specs, Grade 5, Class S.

RATINGS Based on approximately 20% regulation from no-load to full-load RMS conditions.

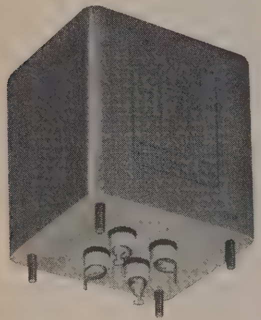
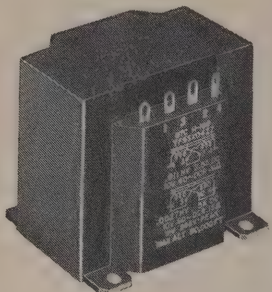
METAL CASED



MOLDED



PACKAGING Hermetically sealed. H-70 group — Metal encased. H-105 group — molded.

APPLICATIONS Transistor supply units have two windings for wide flexibility. All are swinging types to enhance power supply regulation.

CONSTRUCTION Grain-oriented core materials impart highest permeabilities, producing exceptionally high inductance for size.

MIL SPECS To complete MIL-T-27D Specs. H-70 group (metal cased) Grade 4, Class S. H-105 group (molded) Grade 5, Class S.

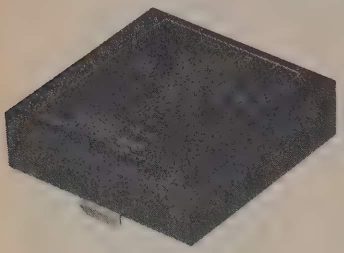
400 Hz Power Transformers
Low Profile MIL-T-27 Grade 5 Class S

TRW
POWER

FP Series



APPLICATION Offering significant cost and size advantages over competitive low-voltage, high-current toroids, FP Series 400 Hz power transformers are wide applicability types which will fit many modern circuit needs.

RATINGS Three power levels are available: 10, 20 and 30 watts. Within each power rating, three different winding and secondary tap arrangements are provided to cover a total voltage range from 2 to 30 volts. Since performance specifications are based on maximum-voltage, full-winding use, slight power derating is required when employing lower voltage taps, to keep current density normal.

CONSTRUCTION FP transformers feature a semi-toroidal, hum-bucking, self-shielding construction. Integral electrostatic shields are terminated in two unique mounting tabs. The units are of a low-profile design — .62 inches high — to fit "sandwich board" shallow drawer requirements. "PC" terminal types on all units.

MIL SPECS To complete MIL-T-27D specifications. MIL Type No. TF5SO3ZZ.

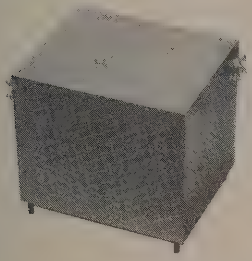
HIT™ Series Ultrashielded Power-Line Isolation Transformers



SIMULATES BATTERY OPERATION FOR CRITICAL CIRCUITS REQUIRING EXTREME ISOLATION FOR POWER LINE.

The effective capacity coupling between primary and secondary windings is less than 0.1 pf. Individually terminated shields allow maximum circuit design flexibility to further reduce this minute capacitance. Input and output terminals are on opposite sides of housing for excellent line/load isolation.

Transistor Supply Transformers

Primary 115 V 50/60 Hz (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.C.T.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding.

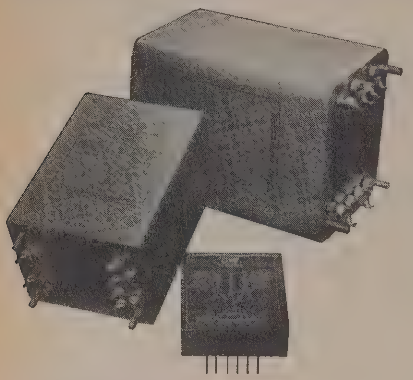
PH and PV Universal Three-Phase Transformers

TRW
POWER



PH Series three-phase transformers are electrostatically shielded isolation transformers constructed to MIL-T-27 specifications.

Two Grade 4 metal-cased PH units are intended for 50/60-Hz, 120/208-volt Wye or 120-volt Delta inputs. One is rated at 65 watts, the other at 360 watts.

A 25-watt, molded Grade 5 PH unit is designed for 400-Hz, 115/200-volt Wye or 115-volt Delta inputs. All PH Series primaries and secondaries can be connected in either Wye or Delta.

PV Series three-phase transformers are identically packaged and suggested for similar inputs, but feature windings arranged and tapped to provide low-voltage, high-current inputs for full-wave bridge circuits.

Two Grade 4 metal-cased PV units for 50/60-Hz inputs provide 3.1 to 48 volts DC in 27 different voltage combinations, at currents ranging from 1.25 to 12.5 amps DC.

A Grade 5 molded PV transformer for 400-Hz use has the same voltage capabilities, but yields bridge circuit currents from 0.5 to 0.87 amp DC.

PH SPECIFICATIONS

Type No.	Application	AC Input	Nominal AC Output
PH-065	Isolation	120 V, 50/60 Hz Delta	120 V @ 0.31 A/line
		208 V, 50/60 Hz Wye	208 V @ 0.18 A/line
PH-360	Isolation	120 V, 50/60 Hz Delta	120 V @ 1.73 A/line
		208 V, 50/60 Hz Wye	208 V @ 1.00 A/line
PH-425	Isolation	115 V, 400 Hz Delta	115 V @ 0.13 A/line
		200 V, 400 Hz Wye	200 V @ 0.07 A/line

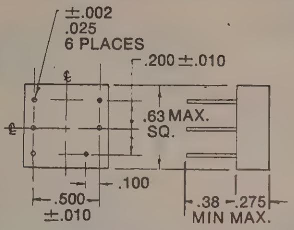
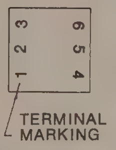
Multiplex Data Bus MIL Std. 1553B Pulse Transformers

TRW

PULSE





TERMINAL MARKING

Type No.	Application	Ratio*
MPX-100	Isolation Transformer	1 CT: 1 CT
MPX-200	Coupling Transformer	1.41 CT: 1 CT
MPX-300	Coupling Transformer	1.25 CT: 1 CT

* Other ratios available on special order.

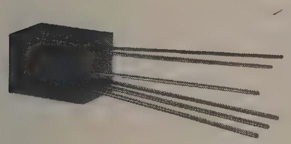
MIL SPECS MPX pulse transformers fully meet MIL STD 1553B Command/Response Multiplex Data Bus requirements. They also meet MIL-T-21038D Pulse Transformer Specs. MIL Type No. TP7SX( ) KZ.

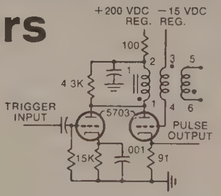
PERFORMANCE MPX pulse transformers feature a high efficiency design for minimum losses. Common mode rejection ratio is greater than 45 db at 1 MHz. Input impedance is greater than 3000 ohms over the band from 75 KHz to 1 MHz at 1V rms. This series possesses exceptional waveform integrity: Rise time and fall time is less than 100 nanoseconds. Overshoot and ringing is less than ±1V peak. Droop is less than 20%.

CONSTRUCTION All windings are centertapped for greater circuit application flexibility. The series is packaged in a printed circuit style configuration, with a low profile configuration of 0.275 inches maximum height.

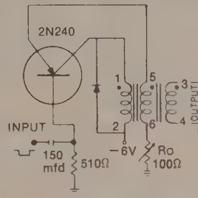
Dielectric withstanding voltage is tested at 100 Vrms.

Plug-in Precision Miniature Wide Application Pulse Transformers





TEST CIRCUIT FOR PCH-45 TO PCH-57



TEST CIRCUIT FOR PCH-60 TO PCH-68

PCH pulse transformers are plug-in versions of our MIL-T-21038 line of pulse transformers H45 to H57 and H60 to H68.

PACKAGING Hermetically sealed. Epoxy cased.

CONSTRUCTION Designed to be used on PC boards with 0.1″ pin spacings. The pins are in a non-symmetrical pattern to provide foolproof insertion.

MIL SPECS Meet MIL-T-21038D Specs. All units are Grade 7, Class S, Life X.

APPLICATIONS Transistor blocking oscillators, SCR drivers, coupling and isolation. The PCH-45 through PCH-57 also can be used in transistor circuits.

NOTE The units are individually adjusted in the circuit shown for each group. Parameters are checked to give the required pulse widths.

BIT-P™ High Performance Pulse Transformers

TRW

PULSE

Size - See Page 7.

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

FLEXIBILITY

Stock units are designed for the standard blocking oscillator circuit shown as well as for coupling application. By interconnecting windings, a variety of primary to secondary ratios may be obtained.

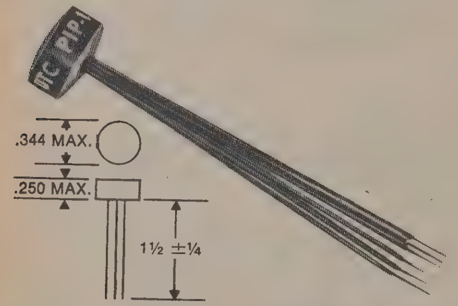
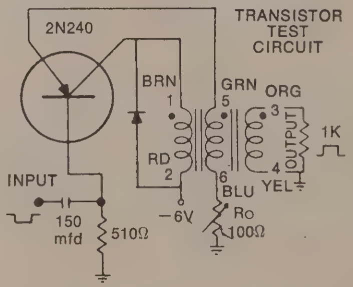
* Input winding terminals 1 & 5, output winding terminals 6 & 7, terminals 9 & 10 open.

Precision Miniature Wide Application Pulse Transformers





PACKAGING

Hermetically sealed. DO-T family construction. See Catalog page 8.

MIL SPECS

To complete MIL-T-21038D Specs. Grade 6, Class R, Life X.

APPLICATION

Transistor. D.W.V. Test = 100V.

NOTE

All individually adjusted to parameters shown and checked in test circuit to give required pulse width.

CUSTOM TRANSFORMERS

Power • Constant Voltage • Step-up • Step-down • Isolation • High Voltage • Filament • High Current • Plate • Output

Wayne Transformer designs and produces custom transformers to your most critical and demanding requirements. Wayne's years of experience added to its design and fabricating flexibility gives you custom transformers at production prices -- in a minimum of time, from 1 to 500 K.V.A., commercial and military.

Prototypes and short run lots available.

Come and visit our plant, or write for FREE literature: **WAYNE TRANSFORMER COMPANY, INC.**, 99 Hazel Street, Paterson, N. J. 07503.

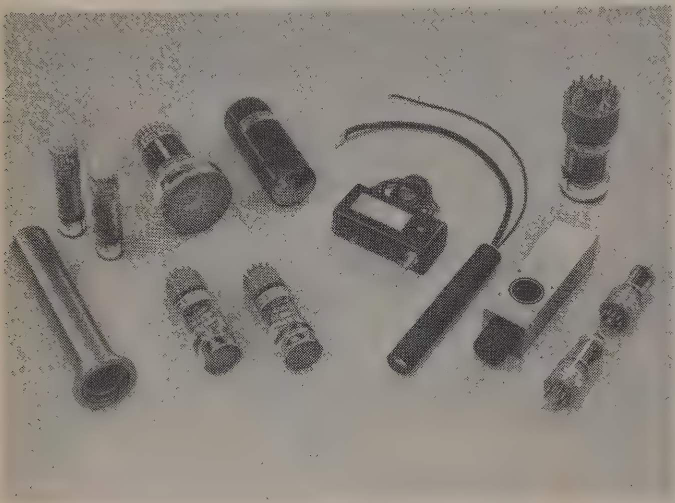
THORN EMI

Photomultiplier Tubes and Accessories for OEM Applications

Leading manufacturer of high-quality, reliable PMTs and accessories for industrial and medical applications. Most models available for same-day shipment.



- **R.I.A. INSTRUMENTS**
- **POLLUTION MONITORS**
- **SPECTRUM ANALYZERS**
- **MEDICAL INSTRUMENTATION**
- **PHOTOMETERS**
- **QUALITY CONTROL INSTRUMENTS**
- **SPECTROFLUOROMETERS**
- **GAMMA CAMERAS**
- **T.L.D.**
- **SCINTILLATION COUNTERS**

PARTIAL LISTING*

Tube Type	Diameter (Inches)	Description and/or OEM Application
9826	¾	Small, fast, high-gain. For compact monitors and probes. Can be provided in a 1-inch dia. assembly including voltage divider network and magnetic shield.
9781	1⅛	General-purpose side-window.
9924	1⅛	Low-cost, compact, bialkali. Low-noise, high sensitivity & stability make it particularly useful in R.I.A. and photon counting equipment.
9798	1⅛	Red-sensitive, S-20 version of the 9924, both electrically and mechanically identical. Used in comb. with 9924 in 3-color film scanners and spectrum analyzers.
9943KB	1½	Low-cost, circular focus, low-noise, general-purpose. Especially suited for R.I.A. and scintillation counters.
9902KB	1½	CsSb version of 9903KB.
9903KB	1½	BeCu linear focus version of 9943KB.
9772K	2	Replacement for RCA 6342A.
9849	2	Curved window for liquid scintillation counters.
9956	2	General-purpose. Particularly suited for scintillation applications.
9758	3	For general scintillation, gamma counting applications.
9858	3	BeCu dynodes and focus for gamma cameras.

ACCESSORIES Model	Description and/or OEM Application
RFI/S-MKII	Housing for all side-window PMTs.
RFI/QL-30F	Housing for ¾-inch and 1-inch diameter PMTs. Facilitates easy field replacement of tubes.
RFI/B-2F	Housing for 2-inch dia. PMTs. Comes in 4 sizes with bayonet lock end-cap.
Dynode Chains	Low-cost, custom-design dynode chains.
MPS-1600	Low-cost, 500-to 1600-volt PMT power supply. Pos. or neg. polarity.
MPS-2000	Compact 0-to 2000-volt PMT power supply. Pos. or neg. polarity, with 2 voltage input options.
HM Series	Modular PMT power supplies for applications requiring up to 5000 volts output.
C-10/AD-100	Low-cost photon counter with 4 output modes, including computer interface and 8-digit L.E.D. Perfect for interfacing with photometers, fluorometers, etc.
Plastic Scintillator	The complete range of Nuclear Enterprise organic plastic scintillators can be supplied coupled to the PMT of your choice, or as a separate item.
PMT Assemblies	PMT/dynode chain/power supply assemblies. Supplied completely potted with magnetic shield, tested to customer specs. Perfect for instruments requiring field replacements.

THORN EMI

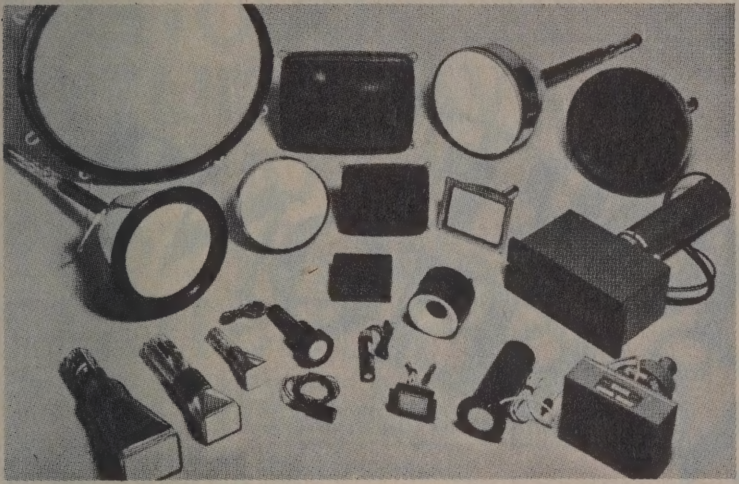
Brimar High-Technology CRTs and Wound Components

THORN EMI Brimar is Britain's largest manufacturer of high-quality CRTs for every kind of information display and instrumentation.



- **INDUSTRIAL**—Oscilloscopes; Waveform Monitors; NDT Instruments
- **AVIONICS**—Color Penetration; Plasma Matrix Displays; Head-Up and Head-Down Displays; Helmet Mounted Displays
- **RADAR**
- **COMPUTERS**—CAD/CAM
- **PHOTOTYPESETTING**
- **MILITARY**—Tank Sights; Ruggedized Monitors
- **PROJECTION SYSTEMS AND SIMULATORS**

PARTIAL LISTING*

Selected Types	Description and / or Application	Diag. (In.)	Face Shape	Minimum Useful Screen Area (Inches)
INSTRUMENT TUBES				
D7-200	Low-cost, general-purpose, CRT for small oscilloscopes and wave form monitors.	3	▬	2x1.6
D7-201	Similar to D7-200, with low-power heater for portable instrumentation.	3	▬	2x1.6
D7-231	Similar to D7-201, with flat faceplate.	3	▬	2x1.6
MONITOR / DATA DISPLAY TUBES				
M17-10	7″ diag., 70°, general-purpose monitor CRT.	7	▬	5.2x3.9
M17-15	Similar to M17-10, with laminated faceplate and mounting frame.	7	▬	5.2x3.9
M19-100	7.5″ diag., 70°, general-purpose monitor CRT.	7.5	▬	5.7x4.5
M19-101	Similar to M19-100, with laminated faceplate.	7.5	▬	5.7x4.5
M19-110	Ruggedized version of M19-101, with 1000-line data display.	7.5	▬	5.7x4.5
M23-113	9″ diag., 90°, 1000-line data display CRT with mounting lugs, laminated faceplate and A-R coating.	9	▬	7.2x5.5
M23-130	Similar to M23-113, with implosion protection, green filter, and 2000-line resolution.	9	▬	7.2x5.5
M24-120	9.5″ diag., 90°, 2000-line monitor with rimguard.	9.5	▬	7.6x5.7
M28-132	11″ diag., 90°, 2000-line monitor with laminated faceplate, A-R coating and rimguard.	11	▬	9x6.7
M31-191	12″ diag., 90°, 1000-line monitor with laminated faceplate, A-R coating and mounting lugs.	12	▬	10x7.7
M38-101	15″ diag., 90°, 6000-character data display tube.	15	▬	12.1x9
M38-341	15″ diag., 110°, high resolution, 8000-line, data display tube with laminated faceplate.	15	▬	12.1x9
M50-120	20″ diag., 110° monitor tube with rimguard and mounting lugs.	20	▬	15.5x12.1
AVIONIC DISPLAYS				
02B / 97	HUD CRT package with shield and yoke. Features high resolution and high-brightness.	1	●	0.8
02D/50410	Helmet-mounted display CRT package with very high resolution and brightness.	1	●	0.8
06A/1049	2.5″ dia., high-resolution / high-brightness HUD.	2.5	●	1.85
DE 2025	HUD CRT package with shield and coil.	2.5	●	1.85
Plasma Matrix	Up to 15 rows x 22 characters, high-brightness, rugged, wide angle viewing, low power d.c. Also graphics display.		▬	

Selected Types	Description and / or Application	Diag. (In.)	Face Shape	Minimum Useful Screen Area (Inches)
MILITARY DISPLAYS				
02B/1221	For spot injection / thermal imaging applications including tank sights. High-brightness / high-resolution, rugged CRT package with shield and coil.	1	●	0.8
02F/1101	Similar to 02B/1221 with fiber optic faceplate.	1.	●	0.8
03C/50408	Electrostatic deflection and focus. High-resolution / high-brightness package for spot injection / thermal imaging.	1	●	0.8
06C/1091	Compact, rugged CRT package for military vehicle displays where resolution is critical.	2.75	●	0.8
PHOTOTYPESETTING				
02B/50482	High-resolution / light-output package.	1	●	0.8
06B/127	High-resolution and brightness package.	2	●	1.6
13G/75	Ultra-high resolution (0.0008″ spot size).	5	●	4.1
DE 2058	Package with fiber optic faceplate.	10	▬	8x1.34
SIMULATION / PROJECTION SYSTEMS				
03B/1198	High-brightness / resolution, compact CRT package.	1.2	●	1.2
09K/1034	High-brightness / resolution CRT package.	3.7	●	3.2
06D/130	Schmidt optics, forced-air cooled.	2.5	●	2.25
13I/00	Schmidt optics, forced-air cooled.	5	●	4.7
DEFLECTION YOKES / FOCUS COILS				
DY-100 Series	Suitable for high-speed random access and precision displays 37mm neck, 52°C deflection.			
DY-310 Series	For airborne displays, 28mm neck, 70°C deflection, inductance 20uH to 24mH.			
DY-330 Series	For airborne displays, 23mm neck, 70°C deflection, inductance 22uH to 10mH.			
DY-360 Series	For airborne displays, 23mm neck, 52°C deflection, inductance 45uH to 3.2mH.			
DY-380 Series	For computer displays, 28mm neck, 90°/110° deflection, inductance 56uH to 24mH.			
DY-600 Series	Designed for the highest precision system. 37mm neck, 40° deflection.			
FC52	Focus coil for 23mm neck CRT, 350mA/31 ohm main focus.			
FC55, FC58	Focus coils for 37mm neck CRT, 450mA/27 ohm main focus, with dynamic focus.			
FC-61	Astigmatisim correction coil for FC-59 focus coil.			
MICROSPOT ANALYZER				
MA-100	Microspot analyzer for precision CRT testing.

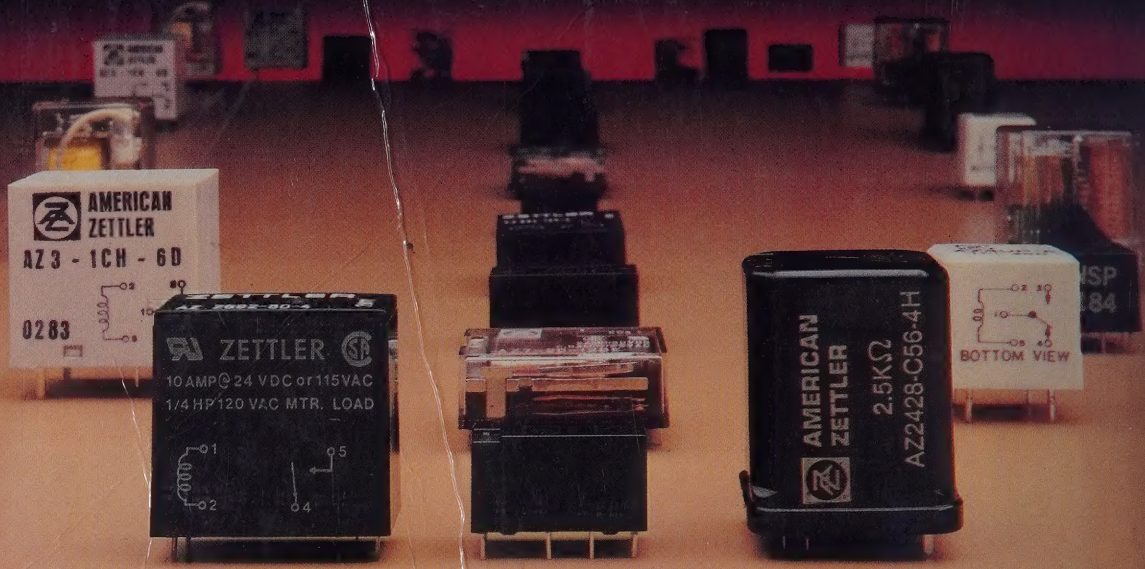
RELAYS FROM "A-Z"



MINIATURE POWER RELAYS LOW PROFILE RELAYS GENERAL PURPOSE RELAYS

American Zettler's broad line of quality relays makes it easy to find the relay that meets your specific needs. We've got the types, package styles, power ratings and sensitivities for your most demanding applications.

All types of American Zettler relays are available in Sealpak® epoxy-sealed versions. We lead the field in sealed relays—more than half of our total production consists of these tough, process-proof units.

General Purpose Relays for Many Applications
These versatile relays feature dry circuit to high current switching in many contact configurations, with coil sensitivity down to 40mW. A multitude of mounting options, including sockets are available.

Miniature Power Relays for High Current, Low Cost Switching
Capable of switching up to 10 Amp @ 120 VAC with only 100mW coil power, these compact relays are ideal for motor controllers and other high-power applications. Some types are designed to meet European Codes such as 4000 VRMS coil to contact. They're available with up to 4 PDT with a variety of terminations and sockets. When board space is at a premium, choose a compact, narrow Slimpak™ version.

Low Profile Relays for PC Board Applications
With a seated height of less than one-half inch, these Thinpak® relays are ideal for use where space is a consideration. They mount directly on PC boards and feature contact load up to 10 Amp @ 120 VAC. For telecommunications applications we offer models with bifurcated contacts and FCC 1500V surge (part 68) versions.

Find out more
To get complete information on the full line of American Zettler relays and receive a free copy of our "Relay Selection Guide," call Dave White toll-free at **(800) 854-8474.** In California call **(714) 660-1670.** Or write American Zettler, 16881 Hale Avenue, Irvine, California 92714.
